I am writing this letter as a director of Perpetua Recourses and a long-time mining executive. I joined the board of Perpetua because I not only saw the opportunity to support a developing Tier 1 gold and antimony project, but as importantly to be part of a major environmental restoration project. I was very impressed with the team, the planning around the restoration and the very positive community engagement. The Administrative Settlement Agreement and Order on Consent (ASAOC) further demonstrated the commitment to the restoration effort regardless of project approval.

In addition to the significant positive financial and environmental impact this project will provide to the community, the project will provide the only production of antimony in the United States, Antimony has been designated as a strategic mineral by our government and is of major importance to the Dept. of Energy but more importantly the Dept. of Defense. This strategic mineral is currently sources primarily from Russia and China, which is clearly not in the best interests of our nation.

Please join me in supporting a project that brings much needed economic support to a community, provides major environmental remediation and provides a strategic mineral for our nation security. Thank you!
