

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the public permitting process. I know this project will have a positive impact on the environment, communities surrounding the site and Idahoans.

Today, steelhead and Chinook salmon cannot access spawning grounds because they are blocked by an abandoned mining pit. Perpetua will address this issue before mining even begins – reconnecting fish for the first time in more than 80 years. The company will build a fish passageway in the short term. Based on professional judgement and similar or longer tunnels, the SDEIS concludes Perpetua's tunnel would provide passage for all four special status fish species at site. It is important to note Perpetua will eventually restore full access to 25 miles of perennial stream and 6 miles of fish spawning habitat above the Yellow Pine pit. If we do not allow Perpetua to move forward with their plans, it is highly unlikely anyone else will provide the funds needed to reconnect fish to this currently lost habitat.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward, especially now with the further improvements to water quality conditions on site. This is just one example of how the permitting process has worked to improve the plan. Don't you think six years is five years too long to approve the mine. We as Americans have built great monuments and even greater buildings in less time than it's taking to permit digging a hole!!! Really, I suppose we should be impressed with the thorough research you provide but unfortunately it's just the opposite. Let's all grab a mitt and get into the ballgame!
