

It is with great pleasure that I write to the U.S. Forest Service to encourage you to permit the proposed activities outlined by Perpetua Resources during this public input process. This project could help restore Stibnite, secure an American source of antimony and strengthen our nation's supply chains.

It is clear to me that Perpetua's refined plan, identified as the preferred alternative in the SDEIS, is the safest option for Idahoans. In this plan, Perpetua will utilize the Burntlog Route and not travel along Johnson Creek. This will help reduce the impacts of mine traffic on roads used by recreationalists. Burntlog is also a much safer option. In fact, the SDEIS says there are more avalanches and rockfalls along the Johnson Creek Route and these incidents are more significant in size. It would be unwise to route mine traffic on a road with so many known risks and would likely increase the possibility of accidents. Therefore, I support the preferred alternative using Burntlog Road.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
