

I am writing to express my full support of Perpetua Resources and the Stibnite Gold Project. The project would finally address legacy mining issues that have been plaguing the site for decades and help secure the minerals we need for America's future. The company has shown its commitment to Valley County and the state of Idaho and I encourage you to adopt the proposed activities outlined in the company's 2021 Modified Mine Plan during the permitting process.

Salmon have been cut off from miles of high-mountain spawning grounds and rearing habitats since roughly 1938, when the East Fork of the South Fork of the Salmon River was diverted around the Yellow Pine Pit. We need to do better. Fortunately, Perpetua Resources plans to design and install a fish passageway to help connect fish to their native spawning grounds before mining even begins. While skeptics have questioned whether or not the passageway would work, the SDEIS concludes it will provide passage for all four special status fish species at Stibnite. And, once mining at the Yellow Pine Pit is complete, Perpetua would begin full restoration of the river, creating a long-term solution for salmon to spawn upstream. This is just one of the benefits of the preferred alternative.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward, especially now with the further improvements to water quality conditions on site. This is just one example of how the permitting process has worked to improve the plan.
