

This letter is to express my support of Perpetua's Stibnite Gold Project. America needs this project to be permitted. It would produce our country's only source of antimony, a mineral we need for a secure and sustainable future. I hope after reading my thoughts you will understand why my support for this project is so strong.

I support the preferred alternative because it will help minimize the impacts of mine traffic and reduce the risk of accidents and spills. According to the SDEIS, less than 10 miles of the Burntlog Route is within a half mile of a waterway compared to 27 miles on Johnson Creek. The Johnson Creek Route would put our community and fish at greater risk if there was ever an accident or spill while Perpetua was traveling to site. I want to keep traffic as far away from rivers, streams and creeks as possible.

As the U.S. Forest Service and other state and federal agencies review the 2021 Modified Mine Plan and determine the course of action, I encourage you to consider the positive benefits Perpetua Resources will have on Idaho, especially now that the company has reduced its environmental footprint and made further improvements to water quality. This truly is a win-win opportunity for Idahoans and the environment. After years of careful scrutiny by regulators and the community, it is time for us to make these benefits a reality.
