

I have reviewed Perpetua Resources' plans and met with members of their team to better understand the Stibnite Gold Project. I am impressed with the company's commitment to use modern mining to leave the area better than they found it, while providing our nation with the minerals we need. Below are my comments on the plan to be included in the project record.

Today, arsenic and antimony levels at the site are far beyond what is considered healthy for humans or aquatic life. Metals have been leaching into the ground and surface water around the site for years from mine waste that was left behind from legacy mining operations. The Stibnite Gold Project, as outlined in the preferred alternative, will improve water quality conditions at the site because Perpetua Resources plans to remove old mining materials. Of course, the project will contribute new mine waste. However, the SDEIS concludes Perpetua's design features and today's technology will reduce new impacts to water quality. There are environmental benefits to the Stibnite Gold Project and I believe the right checks and balances are in place to move the project forward.

I urge you to approve Perpetua Resources' project. The Stibnite Gold Project will provide a huge benefit to our community and the local environment and the company has taken the time to reduce its footprint and improve water quality at site. The permitting process is designed to move the best plans forward and I feel that is what we will do with the 2021 Modified Mine Plan.
