

Thank you for the opportunity to comment on the SDEIS for the Stibnite Gold Project. This project is important for Idaho's future and our nation's future. Perpetua Resources has a plan to leave the site better than they found it and produce antimony, a mineral we need for our national defense and clean energy future.

The EIS document estimates that the project will generate \$29.4 million in taxes annually and create thousands of jobs for Idahoans and nationwide. I reviewed section 21 which summarizes the beneficial economic impacts from the project. The 2,690 jobs created by the mine during operations annually, and almost 5,000 jobs created during construction, would be a huge benefit to the local and state economies. Moreover, these would be high paying jobs offering good benefits and supporting workers families. This is exactly the kind of economic incentive that is needed in rural Idaho. The McCall area can't make it on tourism alone.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
