

Public participation is a huge part of the permitting process and I appreciate the opportunity to share my thoughts on the SDEIS. This project is important to me because it can provide America with a domestically mined source of antimony and restore an abandoned mine site in need of repair.

I've read the economic impacts section of the SDEIS, which estimates that the full compensation for Stibnite Gold Mine jobs would be \$67700/year and \$96600/year after accounting for health and employee benefits. The document says that this is about the same as the area's prevailing Davis Bacon rates of \$20-30/hour. You don't need to be good at math to see that the Stibnite Gold Mine jobs are going to pay a lot more than a Davis Bacon job – even \$30/hour is less than \$67k/year. Add in \$30000 in annual benefits and these are excellent jobs, the kind much needed for local workers to support local families, especially given inflation.

As the U.S. Forest Service and other state and federal agencies review the 2021 Modified Mine Plan and determine the course of action, I encourage you to consider the positive benefits Perpetua Resources will have on Idaho, especially now that the company has reduced its environmental footprint and made further improvements to water quality. This truly is a win-win opportunity for Idahoans and the environment. After years of careful scrutiny by regulators and the community, it is time for us to make these benefits a reality.
