

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

The SDEIS concludes there will be net benefits associated with the Stibnite Gold Project. Some of those benefits will occur before mining even starts. For example, Perpetua Resources will construct a fishway that allows fish to travel to upstream habitat that they have been unable to reach for decades. Because of this the SDEIS said the greatest benefit to Chinook salmon and steelhead passage will occur during construction, when the fishway is built. Perpetua eventually plans to restore the East Fork of the South Fork of the Salmon River, so access to upstream waters is permanently restored for fish. I want to see the conditions at Stibnite improve. I know Perpetua Resources can make it happen.

For the above reasons and many more, please move forward with the 2021 Modified Mine Plan for the Stibnite Gold Project as it is important to all Idahoans. After more than 12 years of scientific analysis by the company and six years of regulatory review that the project, we should not have to wait much longer to recognize the project's benefits.
