

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

Our lives depend on mining. We need minerals for our cell phones, computers, cars and pretty much everything in between. While mining is crucial, we cannot sacrifice our environment in the process. Mining must be done responsibly. When the USFS identified Perpetua's improved plan as it preferred alternative, it signaled they believe the company can limit community and environmental impacts and mine. Reviewing the SDEIS, I was pleased to see the preferred alternative would improve water quality conditions in Meadow Creek and the East Fork of the South Fork of the Salmon River by removing the repurposing legacy tailings. The conditions on site are not going to fix themselves. Perpetua Resources is our best bet to improve water quality.

The SDEIS reduces the size of the project footprint, improves water quality, eliminates the need for long-term water treatment and makes sure water temperature on site does not exceed baseline conditions – all while providing our nation with access to a mineral we desperately need. The permitting process has been thorough and complete. Now, I hope the U.S. Forest Service will realize the benefits this project and permit the Stibnite Gold Project using the 2021 Modified Mine Plan.
