

I am writing to express my views on Perpetua Resources' Stibnite Gold Project. The opportunity presented by the project is compelling for many reasons and I am committed to seeing come to fruition. This is the best opportunity to clean up legacy tailings and waste, reconnect fish to miles of spawning grounds that they have been blocked from for 80 years and restore a river. Without Perpetua Resources, the site will likely never get the environmental attention it deserves.

I am pleased to see Perpetua Resources wants to take responsibility and clean up the damage left behind by mining operations in the early 20th Century – even though the company was not involved in any of the previous activity at the site. Perpetua has a plan to reunite salmon and trout with their spawning grounds for the first time in 80 years. They plan to provide permanent access to approximately 25 miles of perennial stream and 6 miles of anadromous fish spawning habitat, and the company has agreed to install a temporary fish passageway that will allow fish to swim past the old mining pit before mining even begins. The SDEIS concludes providing volitional passage would result in major, permanent, regional and beneficial effects for fish. Perpetua Resources is our best chance to rewrite the history of the site and finally fix longstanding environmental issues.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
