

Perpetua Resources has been a member of our community for the past decade. During this time, the company and its employees have become wonderful champions and supporters of Idaho. They've volunteered their time in our schools and given generously to community causes. Perpetua Resources' track record of following through on its promises and doing the right thing gives me the confidence to write in support of permitting the Stibnite Gold Project.

In order for Perpetua Resources' Stibnite Gold Project to move forward, the company must mitigate for any impacts the project will have on the environment. In the 2021 Modern Mining Plan of the SDEIS, the company has outlined how it can leave water quality on the site better than it is today and provide fish with access to more habitat. I was pleased to learn Perpetua Resources has also taken steps to protect air quality. According to analysis in the SDEIS hazardous air pollutants were found to be well below major thresholds and the Operations Area Boundary would not exceed the National Ambient Air Quality Standards. To me, these facts from the SDEIS demonstrate the proper checks and balances are in place to protect the environment.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
