

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. Today, fish cannot swim past the Yellow Pine pit and heavy metals are leaching into the ground and surface water. The Stibnite Gold Project can leave the conditions better than they are today.

In order for Perpetua Resources' Stibnite Gold Project to move forward, the company must mitigate for any impacts the project will have on the environment. In the 2021 Modern Mining Plan of the SDEIS, the company has outlined how it can leave water quality on the site better than it is today and provide fish with access to more habitat. I was pleased to learn Perpetua Resources has also taken steps to protect air quality. According to analysis in the SDEIS hazardous air pollutants were found to be well below major thresholds and the Operations Area Boundary would not exceed the National Ambient Air Quality Standards. To me, these facts from the SDEIS demonstrate the proper checks and balances are in place to protect the environment.

The Stibnite Gold Project has been under federal review for the last six years. That has given regulators and the public plenty of time to review the company's plan. I know this project will transform an area in need of environmental repair and secure a domestic supply of antimony. It is for all of these reasons that I encourage you to move the Stibnite Gold Project forward.
