

I have been closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents an opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am grateful for the opportunity to comment on their SDEIS.

Today, arsenic and antimony levels at the site are far beyond what is considered healthy for humans or aquatic life. Metals have been leaching into the ground and surface water around the site for years from mine waste that was left behind from legacy mining operations. The Stibnite Gold Project, as outlined in the preferred alternative, will improve water quality conditions at the site because Perpetua Resources plans to remove old mining materials. Of course, the project will contribute new mine waste. However, the SDEIS concludes Perpetua's design features and today's technology will reduce new impacts to water quality. There are environmental benefits to the Stibnite Gold Project and I believe the right checks and balances are in place to move the project forward.

Please move the Stibnite Gold Project forward, especially now that the public has had multiple opportunities to provide feedback and regulators have been analyzing Perpetua Resources' plans for six years. The review process has improved the project and now it is time to make it a reality.
