

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. Today, fish cannot swim past the Yellow Pine pit and heavy metals are leaching into the ground and surface water. The Stibnite Gold Project can leave the conditions better than they are today.

Given the history of the region, I was a bit skeptical when I first heard about this project, but it is clear that Perpetua is going out of their way to put environmental safety and restoration front and center. That is why the USFS identified the company's 2021 Modified Mine Plan as its preferred alternative. The refined plan eliminates the need for long-term water treatment, incorporates measures to manage stream temperatures and reduces impacts associated with access and transportation on Johnson Creek. The fact that regulators named the company's plan as its preferred alternative gives me great confidence in the company's plan. Plus, regulators have concluded the Modified Mine Plan will let Perpetua mine while giving consideration to environmental, economic and technical factors.

Perpetua Resources wants to invest \$1 billion in our state, bring more than 1,000 jobs to rural Idaho and still provide access to Idaho's public lands. This is the type of project our state needs. After reviewing the project for six years, I highly encourage the U.S. Forest Service to move the project forward with the improvements laid out in the SDEIS.
