

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

Given the history of the region, I was a bit skeptical when I first heard about this project, but it is clear that Perpetua is going out of their way to put environmental safety and restoration front and center. That is why the USFS identified the company's 2021 Modified Mine Plan as its preferred alternative. The refined plan eliminates the need for long-term water treatment, incorporates measures to manage stream temperatures and reduces impacts associated with access and transportation on Johnson Creek. The fact that regulators named the company's plan as its preferred alternative gives me great confidence in the company's plan. Plus, regulators have concluded the Modified Mine Plan will let Perpetua mine while giving consideration to environmental, economic and technical factors.

For the above reasons and many more, please move forward with the 2021 Modified Mine Plan for the Stibnite Gold Project as it is important to all Idahoans. After more than 12 years of scientific analysis by the company and six years of regulatory review that the project, we should not have to wait much longer to recognize the project's benefits.
