

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

I am supportive of Perpetua Resources' refined plan in large part because regulators named it as their preferred alternative. The USFS indicated it was the best option for mining the site because it eliminated the need for perpetual water treatment, had a better access route and did a better job managing stream temperatures. Regulators would not have identified Perpetua's plan as their favorite unless they were confident the company could minimize impacts to the environment and community while mining for gold and the critical mineral antimony.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six year. That is enough. Now, it is time to let Perpetua get to work.
