

It is with great pleasure that I write to the U.S. Forest Service to encourage you to permit the proposed activities outlined by Perpetua Resources during this public input process. This project could help restore Stibnite, secure an American source of antimony and strengthen our nation's supply chains.

One of the things that has always impressed me about Perpetua Resources is the company's commitment to using mining to leave Stibnite in better condition than they found it. It is no secret the site is not in great condition today. Water quality has been harmed by legacy mine waste and fish cannot swim past the Yellow Pine pit. Once Perpetua has mined the Yellow Pine pit, the company plans to backfill the pit and restore the natural flow of the river. This will permanently reconnect fish to high quality habitat further upstream. But instead of waiting until mining is complete, Perpetua is proposing to provide temporary access for fish by building a passageway around the pit. The SDEIS concluded this decision will limit the overall impact of habitat reduction for fish in the area of the active mine and also reduce the impacts of dewatering the diversion and stream channel elimination. Perpetua's decision to build a fish passageway proves to me that they are willing to go above and beyond to protect wildlife and the environment.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six year. That is enough. Now, it is time to let Perpetua get to work.
