

I am writing in support of the Stibnite Gold Project. The project will help restore the site, secure the minerals we need for our national security and strengthen America's supply chains. Thank you for the opportunity to provide my feedback as part of the National Environmental Policy Act.

I support the preferred alternative because it will help minimize the impacts of mine traffic and reduce the risk of accidents and spills. According to the SDEIS, less than 10 miles of the Burntlog Route is within a half mile of a waterway compared to 27 miles on Johnson Creek. The Johnson Creek Route would put our community and fish at greater risk if there was ever an accident or spill while Perpetua was traveling to site. I want to keep traffic as far away from rivers, streams and creeks as possible.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
