

I am writing to express my views on Perpetua Resources' Stibnite Gold Project. The opportunity presented by the project is compelling for many reasons and I am committed to seeing come to fruition. This is the best opportunity to clean up legacy tailings and waste, reconnect fish to miles of spawning grounds that they have been blocked from for 80 years and restore a river. Without Perpetua Resources, the site will likely never get the environmental attention it deserves.

One of the things that has always impressed me about Perpetua Resources is the company's commitment to using mining to leave Stibnite in better condition than they found it. It is no secret the site is not in great condition today. Water quality has been harmed by legacy mine waste and fish cannot swim past the Yellow Pine pit. Once Perpetua has mined the Yellow Pine pit, the company plans to backfill the pit and restore the natural flow of the river. This will permanently reconnect fish to high quality habitat further upstream. But instead of waiting until mining is complete, Perpetua is proposing to provide temporary access for fish by building a passageway around the pit. The SDEIS concluded this decision will limit the overall impact of habitat reduction for fish in the area of the active mine and also reduce the impacts of dewatering the diversion and stream channel elimination. Perpetua's decision to build a fish passageway proves to me that they are willing to go above and beyond to protect wildlife and the environment.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
