

I am writing to share my thoughts on Perpetua Resources' Stibnite Gold project. There are many reasons why I am excited for Perpetua's project to come to life. It would provide America with our only mined supply of antimony, a mineral critical to our national defense and energy sectors. I hope through my comments you will understand why I want to see this project move forward.

Perpetua Resources has developed a plan to provide our nation with a domestic supply of antimony and protect the environment in the process. Perpetua is mindful of its impact and has designed its project to meet or exceed environmental thresholds. For example, modeling in the SDEIS showed the Operations Area Boundary would not exceed the National Ambient Air Quality Standards and mercury, nitrogen and sulfur would fall below significant impact levels. I believe Perpetua Resources can strike the balance of mining the materials we need safely, while also protecting and restoring the environment.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
