

Thank you for the opportunity to comment on the plans for the Stibnite Gold Project. Over the last several years, I've had the opportunity to hear a handful of presentations on the project, sit down with members of Perpetua Resources and observe how the company has lived out its mission as it has grown. It is with this knowledge that I encourage you to move the project forward.

I am supportive of Perpetua Resources' refined plan in large part because regulators named it as their preferred alternative. The USFS indicated it was the best option for mining the site because it eliminated the need for perpetual water treatment, had a better access route and did a better job managing stream temperatures. Regulators would not have identified Perpetua's plan as their favorite unless they were confident the company could minimize impacts to the environment and community while mining for gold and the critical mineral antimony.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward, especially now with the further improvements to water quality conditions on site. This is just one example of how the permitting process has worked to improve the plan.
