

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

I agree with regulators and feel strongly that the preferred alternative is the best option for the Stibnite Gold Project moving forward. This option utilizes Burntlog Road. According to the SDEIS, this route would avoid environmental and safety risks associated with the avalanche and landside prone Johnson Creek Road. We need the minerals from Stibnite and Burntlog will allow mining to move forward while minimizing the impacts of mining on the community. Burntlog will reduce mine traffic interactions with the public and decrease the potential for spills near fish-bearing streams.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
