

America desperately needs antimony. This mineral is used in munitions, large-capacity storage batteries, fire retardants and more. Currently, we are entirely dependent on foreign countries to provide this mineral, which is why I am writing in support of the Stibnite Gold Project. This project can stop our import reliance on antimony.

I am pleased to see Perpetua Resources wants to take responsibility and clean up the damage left behind by mining operations in the early 20th Century – even though the company was not involved in any of the previous activity at the site. Perpetua has a plan to reunite salmon and trout with their spawning grounds for the first time in 80 years. They plan to provide permanent access to approximately 25 miles of perennial stream and 6 miles of anadromous fish spawning habitat, and the company has agreed to install a temporary fish passageway that will allow fish to swim past the old mining pit before mining even begins. The SDEIS concludes providing volitional passage would result in major, permanent, regional and beneficial effects for fish. Perpetua Resources is our best chance to rewrite the history of the site and finally fix longstanding environmental issues.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
