

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents our state with an incredible opportunity to bring well-paying jobs to rural Idaho, boost our state's economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

Salmon have been cut off from miles of high-mountain spawning grounds and rearing habitats since roughly 1938, when the East Fork of the South Fork of the Salmon River was diverted around the Yellow Pine Pit. We need to do better. Fortunately, Perpetua Resources plans to design and install a fish passageway to help connect fish to their native spawning grounds before mining even begins. While skeptics have questioned whether or not the passageway would work, the SDEIS concludes it will provide passage for all four special status fish species at Stibnite. And, once mining at the Yellow Pine Pit is complete, Perpetua would begin full restoration of the river, creating a long-term solution for salmon to spawn upstream. This is just one of the benefits of the preferred alternative.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
