

I am writing to express my full support of Perpetua Resources and the Stibnite Gold Project. Perpetua has shown they are committed to Idaho and want to take care of the environment. The company designed its project to clean up legacy waste, reconnect salmon to their native spawning grounds and fix one of the watershed's largest source of sedimentation. The Stibnite Gold Project would leave water quality, wetlands and the river better than they are today. I hope you move forward and permit this project as quickly as possible.

I agree with regulators and feel strongly that the preferred alternative is the best option for the Stibnite Gold Project moving forward. This option utilizes Burntlog Road. According to the SDEIS, this route would avoid environmental and safety risks associated with the avalanche and landside prone Johnson Creek Road. We need the minerals from Stibnite and Burntlog will allow mining to move forward while minimizing the impacts of mining on the community. Burntlog will reduce mine traffic interactions with the public and decrease the potential for spills near fish-bearing streams.

After reading my letter, I hope you can see why you should permit the Stibnite Gold Project. This project is a good thing for Idaho, helps decrease America's dependence on foreign countries for a critical mineral and cleans up the environment. The company also continued to refine its plan in response to the permitting process, so it has the smallest footprint possible and results in improved water quality conditions on site.
