

America desperately needs antimony. This mineral is used in munitions, large-capacity storage batteries, fire retardants and more. Currently, we are entirely dependent on foreign countries to provide this mineral, which is why I am writing in support of the Stibnite Gold Project. This project can stop our import reliance on antimony.

I support the Stibnite Gold Project. It presents the best opportunity to give this area of Idaho's backcountry the environmental attention it needs, while also securing a domestic source of the critical mineral antimony. Water quality at Stibnite has been negatively impacted by legacy mining activity for years. There are elevated levels of arsenic and antimony. Fortunately, the SDEIS concluded surface water concentrations of these elements downstream of the site would be reduced during mining and post-closure due to water treatment. Water quality at Stibnite will not improve unless Perpetua Resources is allowed to move forward with its plan.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward. The permitting process is designed to advance the best plans possible. I believe the work of regulators over the past six years is proof this is what is happening with the Stibnite Gold Project. The thorough review process has been beneficial but there should be no more delays. The project should move forward in a timely manner.
