

This letter is to express my support of Perpetua's Stibnite Gold Project. America needs this project to be permitted. It would produce our country's only source of antimony, a mineral we need for a secure and sustainable future. I hope after reading my thoughts you will understand why my support for this project is so strong.

I am pleased to see Perpetua Resources wants to take responsibility and clean up the damage left behind by mining operations in the early 20th Century – even though the company was not involved in any of the previous activity at the site. Perpetua has a plan to reunite salmon and trout with their spawning grounds for the first time in 80 years. They plan to provide permanent access to approximately 25 miles of perennial stream and 6 miles of anadromous fish spawning habitat, and the company has agreed to install a temporary fish passageway that will allow fish to swim past the old mining pit before mining even begins. The SDEIS concludes providing volitional passage would result in major, permanent, regional and beneficial effects for fish. Perpetua Resources is our best chance to rewrite the history of the site and finally fix longstanding environmental issues.

The SDEIS reduces the size of the project footprint, improves water quality, eliminates the need for long-term water treatment and makes sure water temperature on site does not exceed baseline conditions – all while providing our nation with access to a mineral we desperately need. The permitting process has been thorough and complete. Now, I hope the U.S. Forest Service will realize the benefits this project and permit the Stibnite Gold Project using the 2021 Modified Mine Plan.
