

Linda Jackson

Payette Forest Supervisor

500 N Mission St, Building 2

McCall, ID, 83638

Linda Jackson,

I am a drill operator for T&J enterprises & have worked on the Stibnite site in support of the Cercla cleanup project. I was involved in installation of groundwater monitoring wells around the old heap leach pads. Most of those wells drilled through a lot of gnarley red oxidized mine waste. The geos told me that was pretty typical for the valley and that most of the groundwater had been polluted from all the old mining & dumping. That site is in need of cleanup & Perpetua has a great plan to make it happen without having to spend any taxpayer dollars, I ask that the forest service approve the project at once so that cleanup and site restoration can begin at once.
