

Linda Jackson, Payette Forest Supervisor  
Stibnite Gold Project  
500 N. Mission Street, Building 2  
McCall, Idaho 83638

Ms. Linda Jackson,

America desperately needs antimony. This mineral is used in munitions, large-capacity storage batteries, fire retardants and more. Currently, we are entirely dependent on foreign countries to provide this mineral, which is why I am writing in support of the Stibnite Gold Project. This project can stop our import reliance on antimony.

Perpetua Resources has a clear plan to clean up legacy issues in the historic Stibnite Mining District. The company has recently made improvements to their plans that reduce the project footprint, improve water quality and keep water temperatures at or below current conditions. This will improve fish habitat, water quality and safely store old mine waste. Along with restoring the site, the Stibnite Gold Project will produce the only domestically mined supply of antimony. Currently, China is the top producer of this mineral. If the Stibnite Gold Project moves forward, the United States can become less reliant on other countries. Creating a domestic source of antimony will also be beneficial for America's green future.

Perpetua Resources has also taken the time to work closely with the Valley County Snowmobile committee to work through alternative OSV parking and access from the beginning. They have also taken the time to visit with the local clubs as well. I support the Johnson Creek access during construction, but support Burntlog route life of mine so that those of us that snowmobile can have northern access between Cabin/Trout Creek and Yellow Pine after construction.

Perpetua Resources wants to restore the rivers, wildlife and habitat near the Stibnite Gold Project site. We should let them, especially considering the permitting process has worked and helped the company identify how to improve water quality and temperature in the SDEIS. Besides, we enjoy working with Perpetua and enjoy their honesty and transparency. Please permit the Stibnite Gold Project and continue to move this important project forward.

Thanks,

Greg Eveland
