

As a Valley County property owner and Professional Geologist in Idaho I fully support the Stibnite Project. I have toured this area in person and attended the latest workshop in Boise that answered our questions. Perpetua Resources plan will make immediate improvements to the region's drainages. In terms of critical minerals this is the only known US source of antimony. I do not think China is our friend when it comes to our economy and critical minerals. It is a fact that we have to mine minerals where we find them, and this is where we find antimony.

This project will help Idahoans with needed jobs and local opportunities. I hope the Stibnite Gold Project will be allowed to move forward utilizing Burntlog Road.

As the U.S. Forest Service and other state and federal agencies review the 2021 Modified Mine Plan and determine the course of action, I encourage you to consider the positive benefits Perpetua Resources will have on Idaho, especially now that the company has reduced its environmental footprint and made further improvements to water quality as was shown to us at the latest workshop in Boise. This truly is a win-win opportunity for Idahoans and the environment. After years of careful scrutiny by regulators and the community, it is time for us to make these benefits a reality.

Best regards

Keith Nottingham
