

Leaders, many thanks for the opportunity to comment regarding the Stibnite Gold Project during the NEPA Comment Period. The more I have learned about the company's project, I am excited to see the many opportunities to restore the abandoned site. Per the company, I understand the main opportunities are the site will provide job opportunities to Idahoans, produce America's only domestically mined supply of antimony, improve water quality, and reconnect fish to their native grounds.

The opportunities are many including the following statement in the SDEIS "The restoration activities, particularly providing volitional passage in the East Fork SFSR, would result in a major, permanent, regional, and beneficial effect on Chinook salmon, steelhead, bull trout, and westslope cutthroat trout within the vicinity of mine."

I understand the important of this project to Idaho as well as the United States. I ask the U.S. Forest Service to permit the 2021 Modified Mine Plan so the brownfield site can be restored

Many thanks for the opportunity to comment.
