

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents our state with an incredible opportunity to bring well-paying jobs to rural Idaho, boost our state's economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

Our lives depend on mining. We need minerals for our cell phones, computers, cars and pretty much everything in between. While mining is crucial, we cannot sacrifice our environment in the process. Mining must be done responsibly. When the USFS identified Perpetua's improved plan as its preferred alternative, it signaled they believe the company can limit community and environmental impacts and mine. Reviewing the SDEIS, I was pleased to see the preferred alternative would improve water quality conditions in Meadow Creek and the East Fork of the South Fork of the Salmon River by removing the repurposing legacy tailings. The conditions on site are not going to fix themselves. Perpetua Resources is our best bet to improve water quality.

Reviewing Perpetua Resources' improved plans it is clear to me the company really believes in taking care of the environment and keeping the community safe. That is why they reduced water temperatures, improved water quality and shrunk the project footprint by 13 percent. I urge you to trust in your own review process and permit the Stibnite Gold Project.
