

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. Today, fish cannot swim past the Yellow Pine pit and heavy metals are leaching into the ground and surface water. The Stibnite Gold Project can leave the conditions better than they are today.

Today, arsenic and antimony levels at the site are far beyond what is considered healthy for humans or aquatic life. Metals have been leaching into the ground and surface water around the site for years from mine waste that was left behind from legacy mining operations. The Stibnite Gold Project, as outlined in the preferred alternative, will improve water quality conditions at the site because Perpetua Resources plans to remove old mining materials. Of course, the project will contribute new mine waste. However, the SDEIS concludes Perpetua's design features and today's technology will reduce new impacts to water quality. There are environmental benefits to the Stibnite Gold Project and I believe the right checks and balances are in place to move the project forward.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
