	Mittelstaedt	WI	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Bohlman WY	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Van Drunen	MI	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Murray	CO	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Knight	TX	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Butsko	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Estrada	FL	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Addis	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Kittner	NY	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Kaplan	MI	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. You set the tone for kids in schools to just rewrite rules whenever they feel like the rules get in the way of their selfish interest. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia. Why reward this bad behavior by simply changing the rules they find so hard to follow?</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives. For once, reward the good guys, please?</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Appel	MI	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Beyers	NV	<p>comment: Dear Dr. Wilkes:</p> <p>Thanking GNDN-NY for the shared space to comment:</p> <p>Solar energy development in Nevada - promoted by Usual Suspect Invisibles in the DOE and DOI, and facilitated by the BLM, for commercial corporate utility-variety rush investment - has caused irreparable, and - increasingly - unnecessary damage, to actually valuable, limited, irreplaceable natural resources in the unprotected remaining (Last Stand) "biological refugia" wildlands, here. Objective, professional, Authorized experts - generations of knowledgeable biologists, soil scientists, geologists, biogeography trackers, hydrologists, botanists, wild forage experts, environmental engineers - report that the continuing human industry-caused losses from 1990s culture planning and engineering, are now (in legalese) "uncompensable". Worst of all, construction of last century corporate utility scale "large array" infrastructure (massive lines, towers, Links, stations, seas of panels and battery housing) is - still - hurriedly being inserted across, and deep into, the Last Stand wildlands, because all of that last century engineering is now (overnight), timing out for its efficiency, effectiveness, - and preferred profitability "expectations". Rapid evolution of photovoltaics has rendered it irrelevant, unacceptably uncompetitive, for its financing corporations, no matter how much "protection" it is given, no matter how much valuable waterbanking desert wilderness is sacrificed for the rush investors' too-late plans to offload old bad bets.</p> <p>At least, you had the federal protections in place. Please don't let the amendments be inserted, and stand against allowing protections to be compromised where you are, where you have a chance to stall investors' plans to build, when they know better systems are going to bypass their business model soon - same as with our fitted, modular - better - Microgrid solutions, coming in.</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Ethridge	WA	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. 	Christenson-Nutt IA	<p>comment: Dear Dr. Wilkes:</p> <p>It is way past time that the citizens of this country are over-ruled by corporate "wants"! These pipelines are a clear & present danger to the surrounding ecosystems through which they are proposed to be built on & under! Rules are rules for very good reasons & should not be changed on the whim of ANY company, regardless of the industry. This particular pipeline company has not previously demonstrated that it will adhere to regulations or that it is capable of preventing future disasters! So with that in mind, I am requesting that these arbitrary changes that are being requested be denied on their face!</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Williams	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Lyttle	AZ	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Duport	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Riebschlaeger TX	<p>comment: Dear Dr. Wilkes:</p> <p>Our forests are already greatly devastated by droughts and forest fires. Pipelines carry highly toxic and flammable substances that have often exploded when pipelines fail or leak. This was the case in my own Dewitt County when a 42" pipeline ruptured and exploded several years ago. The ungodly heat melted the pavement a quarter of a mile away. If pipelines are permitted through our forests, they will only add to the risks of further disasters.</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Hooley	MN	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Burnett	FL	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Conyers	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Musgrove	TX	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Victorio	CA	<p>comment: IT IS YOUR JOB to protect the land and the people living on land. You should not allow a company to destroy the people, plants, animals, and even the soil, which is what would happen if the project was allowed to continue. The health of nature and of all people, who rely on nature, must take a higher priority than money. You must put an end to the construction of the Mountain Valley Pipeline.</p>

Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Kress	<p>MN</p> <p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
	Johnson	NY	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Old-growth forests play an imperative role in creating topsoil, and their loss cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project would set a disturbing precedent for what is tolerable on national forests across the country. The applicant has demonstrated its inability to maintain proper and adequate environmental practices since production of this pipeline began. As a result, significant delays have arisen as a result of multiple federal authorizations being vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has suggested there is a desire and need for the Mountain Valley Pipeline, which is speculative and unproven. There are existing supply alternatives and market shifts toward nonfossil fuel alternatives.</p> <p>For the above reasons, we once again request the U.S. Forest Service select Alternative (1) No for "No Action" and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Sutton	KY	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Nolan	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Hughes	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. 	Byerley	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Holguin	TX	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

	Bludgen	IL	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Burow	TX	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Ryan	TX	<p>comment: Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Chris	Boyd	NY	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
gregory allen	iverson	IA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. Dawn	Devoy	CO	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards essential to protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling or real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service should not break 11 of its own rules as a convenience to Mountain Valley Pipeline, LLC, which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of Jefferson NF.</p> <p>Old-growth forests play an important role in creating topsoil, its loss cannot be mitigated and would impair biodiversity.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated an inability to maintain proper and adequate environmental practices during construction. As a result, the applicant has accrued over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>The applicant claims a need for the Mountain Valley Pipeline, which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For all the reasons above, select Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Michael	Horner	MI	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

laura	Lynch	CT	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Ann	Hogg	CO	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Isabella	Randazzo	NY	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Anne	Drinkwater	WI	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Carol	Ellenberger	CA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Jan	Peebles	WI	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Barbara	Levenstien	NV	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Dennis	Grousosky	PA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. Lys	Burden	WA	<p>Dear Dr. Wilkes:</p> <p>My family and I (four voting and tax-paying adults) understand Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 important standards that are essential for protecting Jefferson National Forest. We understand that the company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>We agree that the Forest Service absolutely cannot be permitted to break 11 of its own rules as a convenience to the profit-based Mountain Valley Pipeline, LLC, which, we understand, has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. We strongly agree these 11 proposed changes would be significantly detrimental to soil health, old-growth forest, many species and detriment to people and local communities near Jefferson National Forest.</p> <p>We know forest ecosystems are vulnerable, especially with current climate conditions and any continued negative environmental impacts cannot be tolerated. We are well aware that old-growth forests and older-growth areas play an imperative role in maintaining healthy, living soils, which act as a very effective carbon-sink. This loss of healthy soil cannot be mitigated and should not be tolerated in our currently escalating climate chaos.</p> <p>We think it is imperative that the U.S. Forest Service to select Alternative (1) "No Action" and reject the 11 proposed changes, all of them!</p> <p>We agree that rewriting the rules for one fossil fuel project for USFS land will set a disturbing precedent for potential changes on national forests across the country. We understand since production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia. With a track record like this, Mountain Valley Pipeline should be granted no more concessions... NONE! They have shown they are a bad "player;" they have not earned any rule changes!</p> <p>Furthermore, we understand the applicant has alleged the desire and need for the Mountain Valley Pipeline, and that it is speculative and unproven. We understand there are existing supply alternatives, and we know the market is shifting toward non-fossil fuel alternatives to accommodate climate impact.</p> <p>For these many reasons cited above, my family and I ask again that the U.S. Forest Service select Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest and continuing to allow damage to our imperiled climate health.</p> <p>Thank you. Dan and Lys Burden Mike and Dan Brant</p>

The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Austin	Ellois	LA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. ----------------	-------	----	--

Jim	Steitz	<p>Dear Dr. Wilkes:</p> <p>I implore you to redeem the moral record of the Forest Service toward our Appalachian Mountains and our climate by rejecting the request to amend the forest plans of the George Washington and Jefferson National Forests to accommodate the 'Mountain Valley Pipeline,' a project that patently and brazenly contradicts the purpose of the National Forests, and the objectives of the existing GW&J Forest Plans in particular. The MVP has already inflicted atrocious damage across a wide swath of forests, streams, and farmland. If construction is completed, MVP will help to lock America into a generation of methane consumption, and raw methane leaks into our atmosphere, that our rapidly deteriorating climate cannot survive.</p> <p>Fragile and irreplaceable ecosystems, including some of the finest remaining forests in America, lie squarely in the crosshairs of the pipeline. It defies belief that the staff of either MVP or the Forest Service has become so numbed to this cosmic expression of life and beauty, that they would condone its destruction for a giant metal conduit. This pipeline, is allowed to continue construction, will be remembered with hatred and contempt by our children, as will the FERC staff who permitted such a heinously immoral arson of Earth's biological gems. The pipeline will stand as tangible testament to the modern repetition of our sad errors of exploitation, to the historical lessons that the Forest Service has failed to learn, and to this administration's fanatical obsession with pipelines which respects nothing else as valuable or sacred.</p> <p>The pipeline's breach of the George Washington and Jefferson National Forests is an egregious violation of the public trust placed in our government to protect and steward a national treasure, acquired at great effort and expense by a prior generation. The visionaries who assembled and consecrated the GW&J National Forests for future generations did so with the insight that a future cohort of industrialists might covet the land for a myopic project like a pipeline, and hoped that the National Forest status might preclude exactly such a project as this. The project applicant has not shown that the use of National Forest lands is an absolute necessity for the pipeline to exist, rather than a cost-saving convenience. The Forest Service already has a policy that mere financial efficiency is not sufficient reason for a consumptive, irreversible loss of National Forest lands and resources. Granting a right-of-way for the 'Mountain Valley' pipeline absent such a showing of necessity by the applicant violates Forest Service policy and makes your agency a mere land bank for private developers, not a land manager in the public interest.</p> <p>Further moral travesty is manifest in the utter lack of physical need for the Mountain Valley Pipeline. Vast margins of waste and inefficiency remain in the use of methane gas, both for heating and in the use of electricity generated by gas-fired plants. So long as this remains true, and as long as the Mid-Atlantic States continue their promising increase in the production of photovoltaic solar and wind electricity, the Mountain Valley Pipeline, with mathematical certainty, cannot be a preferred alternative for meeting any purpose and need regarding energy.</p> <p>The frenetic expansion of gas infrastructure is deliciously appealing to the future revenues of pipeline companies and electrical companies who can reclaim any capital cost from ratepayers, but they are contrary to the interests of the general public, both among the prospective consumers of the gas, and all Americans with an interest in a habitable climate. By approving these pipelines, the Forest Service acts as a slavish handmaiden to these for-profit interests, and disavows any pretense of acting as a public regulatory agency. By collaborating with MVP and Federal Energy Regulatory Commission's compulsory confiscation of private property, the Forest Service becomes an agent of corporate authoritarianism, and solidifies the alliance of state and corporate power known to political scientists as fascism.</p> <p>MVP construction to date has already been an ecological catastrophe, with massive destruction of forests and suffocation of streams. Contrary to the euphemistic and Orwellian language of the environmental documentation, these impacts cannot and will not ever be 'mitigated.' They represent the permanent disassembly of the Earth's life support systems, and the systematic peeling of Earth's biosphere from its surface. This is a moral atrocity that requires an extraordinary level of depravity to propose or license. The value of this ecosystem, both in sustaining a planet habitable to humans, and in fulfilling the right to exist of its resident biodiversity, dwarfs the petty rewards sought by pipeline and electrical companies.</p> <p>Even the feeble, token requirements of erosion control in the MVP construction permit have been repeatedly violated, with no material consequences for the pipeline operator that might get a company official's attention. Heavy machinery has crushed, excavated, and shredded soils that required decades or centuries to form, including in fragile wetland and riparian habitats left as mud pits. MVP contractors have treated the erosion control requirements as a joke, and are invited to do so by the absolute, unchecked latitude of the 'when practicable' clauses that litter the permit conditions. We may safely predict that MVP will continue cutting the Appalachian landscape to shards, in the interest of construction schedules and cost control, if allowed this torturous, reworked permit by the Forest Service.</p> <p>Again, I implore you to redeem the legacy of the Forest Service, and mend your gross moral error regarding the Mountain Valley Pipeline, by declining to nullify your Forest Plans, as is plainly a prerequisite for this outrageous pipeline to proceed. The original permits for MVP constituted an act of gross vandalism against the crown jewel of biodiversity of America, and gross violence against our children's prospects for surviving in a habitable climate. Our descendants in future Appalachia will look either upon a hideous metal scar gnawing through a denuded landscape, or a proudly low-carbon energy system. To reissue this permit would indicate that you have learned nothing, and would extend a suicide pact to which our children and our fellow creatures have not consented.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Nolan	Turner	CA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

<p>02/17/2023 - Dusty Cordell added to CARA as a Forms Plus</p>			<p>Dear Dr. Wilkes:</p> <p>Nooooooooooooo!!!! Big oil's time is Up!!! They served their purpose, to get us to where we are, but we have Far Better and Safer means to power ALL OF OUR NEEDS, in this day and age, it's time to Move On!! C'mon, It's just Wrong, AND EVERYBODY KNOWS IT!! Even if they're for it, they Know it's a Bad idea!! Fossil fuels have caused enough damage, with buckets more to come! And that's if we completely stop Everything fossil fuel, RIGHT NOW!! To keep going with any of it is just pure Insanity!! I hope they don't have kids and grandkids that they think they're setting up for the good life, because it's going to be any thing but, while they're fighting for their lives on a planet that's getting way too hot to deal with. While making growing food almost impossible, droughts, floods and hurricanes ripping the country apart, in damage, and lives lost!! That's what their kids and grandkids will Not be enjoying, think about it all before you mistakenly ok this disaster waiting to be unleashed.....jus'sayin, look real hard before you leap.</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Daniel	Ploetz	MS	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Jeff	Milks	IA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Jessica	Dubose	IL	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Holly	Bevan	CO	<p>Dear Dr. Wilkes:</p> <p>When will we finally understand that the harm we have done and continue to do to the natural world around us is doing irreparable damage to us humans. Life on planet Earth is interdependent and every time we humans seek to dominate and consume for ourselves alone, we destroy that much more of what we depend on to survive. The self-proclaimed smartest species is the most clueless and self-destructive.</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Chip	Gaylor	CA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Knud-Erik	Rosenkrantz	NY	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>
Brian K	Sutton	KY	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Michael	Schmaus	IL	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. The company's newly submitted documents do not provide sufficient assessment, monitoring, modeling, nor real-world analyses to support changes to the Forest Plan.</p> <p>The Forest Service cannot be permitted to break 11 of its own rules as a convenience to the Mountain Valley Pipeline, LLC, of which has been unable to meet basic minimum criteria to continue their project due to the environmental risks associated. These 11 proposed changes would be detrimental to the soil health, old-growth forest, species and preservation of the Jefferson National Forest.</p> <p>Forest ecosystems are vulnerable, the negative environmental impacts cannot continue to be diminished. Old-growth forests play an imperative role in creating topsoil, and its loss alone cannot be mitigated and would impair biodiversity.</p> <p>We implore the U.S. Forest Service to select Alternative (1) "No Action" and reject the proposed 11 changes.</p> <p>Rewriting the rules for one fossil fuel project will set a disturbing precedent for what will be tolerated on national forests across the country. Since the production of this pipeline began, the applicant has demonstrated their inability to maintain proper and adequate environmental practices during construction. As a result, significant delays have arisen due to multiple federal authorizations vacated and the accrual of over 500 violations of permit conditions and environmental standards in Virginia and West Virginia.</p> <p>Furthermore, the applicant has alleged the desire and need for the Mountain Valley Pipeline, of which is speculative and unproven. There are existing supply alternatives and market shifts towards non-fossil fuel alternatives.</p> <p>For the reasons stated above, we again ask that the U.S. Forest Service selected Alternative (1) No for "No Action," and reject the 11 proposed amendments to prevent unnecessary damage to Jefferson National Forest.</p> <p>Thank you.</p>

Kelly	Eaves	GA	<p>Dear Dr. Wilkes:</p> <p>The Mountain Valley Pipeline and Equitrans Expansion Project Draft Supplemental Environmental Impact Statement #50036 proposes amendments to 11 crucial standards that are essential for protecting the Jefferson National Forest.
