## Commenting on This Project

The Forest Service values public participation. Communications from the public regarding this project, including commenters' names and contact information, will become part of the public record. Comments, including anonymous comments, will be accepted at any time. However, comments posted after the close of a designated comment period may not be able to be given full consideration. Anonymous comments and comments submitted after the close of the final designated comment period will not provide the commenter standing for administrative review. Comments, or in some cases other expressions of interest, along with respondent's contact information, submitted during the comment period may be necessary to establish a respondent's eligibility to participate in an administrative review for this proposed action. Interested members of the public should review the proposal's information to determine the applicable administrative review process and the eligibility requirements for that process.

- The date of the legal notice of opportunity to comment on this proposed action is the exclusive means for calculating the comment period.
- For proposals to be documented with an Environmental Assessment, the legal notice announcing the comment period appears in the Newspaper of Record.
- For Draft Environmental Impact Statements, the Notice of Availability announcing the comment period appears in the Federal Register.

Your comments are requested through 1/10/2023 11:59:59 PM (Mountain Standard Time).

### Option to Submit Comment Electronically

The form below can be used to submit your comments to the responsible project official.

National Forests have the option to post comments for public viewing on this web site via a public reading room. Active reading rooms allow the public to read or download your letter, including your contact information. If this project has an active reading room, a link labeled "Public Comment Reading Room" will appear on the main project page. The agency may withhold letters containing proprietary information, sensitive cultural or habitat locations, profanity, etc. All letters, including those not posted, will be considered and included as part of the project record.

**Disclaimer: All contact information is optional; however, anonymous comments will not provide standing to object.**

Letter Text	<p>I live in BC about 15 miles north of the US border on the Similkameen River, a tributary of the Okanagan River that flows into the Columbia. At one time it was a Chinook spawning stream until a dam was built south of the border northwest of Oroville WA to generate power during WW II. It is just sitting now blocking the salmon run. I know that Chinook will only spawn in cold water (high elevations) and when I read about Perpetua taking over the operations of the mine I was elated because I had already bought into the former operation of the mine site and was interested in what US authorities had already done by opened the Okanagan to salmon--but no chinooks. The Similkameen Dam has kept them from high cold spawning waters. Thanks to the opening of the mine by Perpetua we can hope that at least some Chinooks will return and officials will look to one other river, the Similkameen by removing a useless dam that does no one any good.</p>
