Troy, MT 59935

RE: Comments - Late, Sorry

Greetings:

The main threat to Troy burning is the mess at Chapel cedar. An ignition at chapel cedar with a wind would burn out "Valley of the Moon" and the northwestern part of Troy.

Other private LAND areas of concern for ignition sources ARE the logging mess at 3 mile on Callahan road, the private small sawmill started on Iron Creek road, and BNSF Railroad.

As for your project, don't be afraid to do too much.

I encourage you to treat the entire face of McConnell Mtn into Callahan creek.

We own 20+ acres along Iron Creek just south & adjacent to the project boundary. You are welcome to use our property for access if needed.

Sincerely

Larry J. Coryell
