I strongly support the Trojan Defense Hazardous Fuels Reduction Project. This project needs to be accomplished as soon as possible to increase the protection of homes, property and people. Fire will be on the landscape at some point and we need to be ready so we have a better chance of controlling it.

Some of the fuels reduction will include merchantable timber that can help supply the wood products industry.

Contractors will be necessary for much of the hazard reduction which will provide more employment and help the local economy.
