Benton, Patricia Lois	2024-01-19	
Mulcare, James S	2024-01-19	
herrington, marna m	2024-01-19	
Bleazard, Seth	2024-01-19	Old growth forest is a limited resource! We need to preserve these unique habitats, allow them to play their ecological role, and help mitigate the climate crisis.
Fraser, Philip	2024-01-19	
Andresen, Anouschka	2024-01-19	
williams, freddie	2024-01-19	
Parsons, Annette	2024-01-19	How can we, as a people, in good faith, continue to cut any of our remaining old growth forests, knowing now what we know about the role of these large, ancient forests in amassing and storing carbon? If we don't act NOW in every manner we possibly can to mitigate climate change, the future for our children and grandchildren is unthinkable. And for our descendants to know we could have done something and didn't is even more unthinkable. Thank you.
Crader, Sue	2024-01-19

McAfee, Michelle	2024-01-19	
Mesa, Annie	2024-01-19	
Wall, Ken J	2024-01-19	
Beca, Bruno	2024-01-19	
putzeys, rosette	2024-01-19	
Null, Ciry	2024-01-19	The more we learn about the complexity of forest ecology the more alarming it is that we're still destroying ancient trees and intact ecosystems. Most of the old growth forests are gone. Why must we destroy the last remnants of these magnificent and irreplaceable landscapes simply for profit? They provide critical habitat for numerous species, they give us invaluable information about how forests live and thrive, they sequester carbon, a critical gift to humankind, and indeed, they are sacred places. For these ancient forests, it is time to be the stewards of Creation that we are called to be.
DeLorenzo, Teresa M	2024-01-19	Stop unsustainable, climate-busting old growth logging! We need to expand the protections for old growth forests.
Way, Patricia L	2024-01-19	STOP ALL OLD GROWTH LOGGING PLEASE! We need the old growth for a healthy ecosystem.
Gibbs, Colleen	2024-01-19	
D'amore, Oceanah	2024-01-19	The decimation of vital old growth forests and trees must stop. Please work to preserve the little forest that remains, and foster the many benefits these trees provide to us all. Thank you.
Rudolph, Erich	2024-01-19	
Null, Hugh	2024-01-19	
Markham, Guy	2024-01-19	

Kuppler, Bonnie L	2024-01-19	
Anthes, Russell	2024-01-19	When the trees are gone...so are we.
DeMello, Iris	2024-01-19	
Hill, Roberta	2024-01-19	We should immediately stop ALL logging of 'mature' and old growth trees and forests! Are we so stupid that we would continue with this TRAGIC and unenlightened practice? I recent saw a pair of diagrams showing where the forests were before all the logging in America and the remaining forests today — I WEPT. Really.
romanaggi, sam	2024-01-19	
Karlovich, Kathleen M	2024-01-19	
Seldon, Wendy	2024-01-19	The science is clear that taking these steps will be essential to protecting our forests, our atmosphere, our watersheds and ultimately our own health. Do this for our children.
Feder, Melanie J	2024-01-19	
Hunter, Ann	2024-01-19	Dear Forest Service Officials Please build lumber harvests on tree farms. Old growth forests are precious ecosystems that can't be replicated. We need them for the health of the planet. Sincerely, Ann Hunter
Schelz, Charles D	2024-01-19	
Stine, Anne	2024-01-19	please attend to this request. Thank you, Anne Stine
Furman, Kelsey	2024-01-19	
snesrud, ian	2024-01-19	
Cooke, Harriet	2024-01-19	Our climate and environmental issues can only be tackled by restoring the lungs of our planet, our forests. Science teaches us that forests have far greater gifts than just timber. We need to restore sufficient old growth stands and harvest sustainably. Additionally, we need forests for mental health! National and state parks are inundated with people for a good reason.
Angell, JL	2024-01-19	
Rieger, Tanja	2024-01-19	
Sévilla, Caroline Je	2024-01-19

Johnson, Kim	2024-01-19	
Moreaux, Brian	2024-01-19	
Houseknecht, Howard A	2024-01-19	It's about time to now act to protect the remaining old- growth forests of this country and mature stands that will one day be old-growth forests!Now is the time to step up and take responsibility for the health of our home--planet earth!
scott, vivian	2024-01-19	
Minock, Daniele	2024-01-19	
Poscharscky, Debra	2024-01-19	

Hirning, Rael	2024-01-19	These trees are super important! Please make the correct decisions for everyone's kids sake.
Gunder, Gary	2024-01-19	
Dianich, A Michael	2024-01-19	
peterson, beth	2024-01-19	
Spotts, Richard Allen	2024-01-19	
Thompson, Donna M	2024-01-19	Protection of old growth trees in our forests is something I would like to have seen long ago. Now is better then later! Please no longer allow the cutting down of old growth trees.
Cole, Linc P	2024-01-19	
Price, Amy	2024-01-19	Not only is it the right thing to do for ecosystem health, an end to the harvest of mature and old growth forests is urgently needed to help stop climate change and is well overdue. I urge our federal land managers to please make conservation of our older forest the highest of priorities before it's too late.
Spevak, Edward	2024-01-19	
Knapp, Harry	2024-01-19	The federal government should encourage and subsidize recycling paper instead of deforestation.
Calvi, Judi	2024-01-19	
Philhower, Margaret	2024-01-19	
Baker-Schloth, Susan	2024-01-19	It can be a great victory for the planet to sign this agreement to SAVE these last great trees!
Vardanyan, Artur	2024-01-19	
Benesovsky, Mary	2024-01-19	
Beaton, Nancy A	2024-01-19	PLEASE leave our old growth forests alone! Save them for generations to come.
Clough, Cyndi	2024-01-19	
Aitken, Selene	2024-01-19	Thank you for protecting our precious trees. Thank you for your work in Service to the Forest.
Cavecche, Jan	2024-01-19	Please protect old-growth forests!
Jones, Laura Anne	2024-01-19	I firmly believe old forest trees are a life line we can not afford to destroy. I believe nature has a way of taking care of itself. I believe man's interference, no matter how well intended, makes the natural ecology outcome worse. It is hard to fathom this planet may not be around in the future, but more and more I see this as a reality. It is our job to do whatever we can to leave no trace behind. Returning this earth to its natural state should be the goal of all who are lucky enough to live here. In Gratitude, Laura
Freeman, Kristin Anne	2024-01-19

Dunn, John	2024-01-19	
Poulos, Charlotte H	2024-01-19	
Broughton, Beatrice E	2024-01-19	
Truong, Justin	2024-01-19	
Chesney, Linda	2024-01-19	I want to see old growth logging stopped so that old growth and all species that depend on old growth ecosystems will still be around for my grandchildren to experience.
Barker, Monique	2024-01-19	
Coleman, Darren R.	2024-01-19	With a career in the wood products industry, a life spent out on public lands, a retirement with saving old growth would be nice.
Outman, Tim	2024-01-19	We have depleted our old growth forests too much. Save the remaining as a legacy of what once was. Thank you!
Schugam, Jennifer M.	2024-01-19	Please help invest in nature & preserve what is left of the natural world. The Cree prophecy states: 'Only after the last tree has been cut down. Only after the last river has been poisoned. Only after the last fish has been caught. Only then will you find that money cannot be eaten.'

Tidwell, Stephanie	2024-01-19	
Edwards, Catherine	2024-01-19	
Brennan, John Polomo	2024-01-19	
Poresky, Paul	2024-01-19	
Maclvor, Autumn	2024-01-19	I'm a builder/ General Contractor with 25 years of experience. I fought forest fires every summer from 1999-2005 and spent 6.5 years with the volunteer Rural Applegate Fire Department. I live on 64 acres of south facing forested land. I can say with a certainty in my industry, we don't need old growth trees, the whole industry is and will continue you use engineered wood products(which are made from small diameter trees). Engineered products are stronger and more stable, have more value as a product and creates more jobs in mills, and manufacturing. Large/old growth trees are no longer needed and hold more value holding carbon in the ground, and bring more tourism and economic benefits in recreation. I can go on with all the values that leaving them standing brings, but I will leave it at this, cutting them down is like mugging a burn victim as they leave the hospital. Thanks for your time. Å
Eldridge, Anne L	2024-01-19	As we know there are a lot of changes that need to be made. The US Forest Service has a lot to make up for. I hope this becomes a strong measure for our country and ourselves.
Wilson, Susan M	2024-01-19

Perry, Mary Ann	2024-01-19	Thank you for doing the right thing for people and the planet.
McDonald, Ralph	2024-01-19	As a frequent visitor to Munger Creek and adjacents areas (including Rogue river) and as a retired Eugene sustainability commissioner I urge you to protest these forests from logging. Thank You, Ralph McDonald
Carnes, Kathryn M	2024-01-19	Once old growth forests are gone they will be gone forever! All the replanting and so called forest management will never produce old growth trees in anyone's lifetime! Some things cannot be replaced!

		Old growth logging is the worst thing we can do to ourselves with respect to the climate, both globally and locally, as it causes desertification downwind and downstream, resulting in wildfires like the Carr and Camp and many others to be much worse as the forest they burned through lacked the billions of gallons per day of evapotranspired water from missing coastal old growth that once stored and released winter rains through the dry western summer. Old growth trees also host the highest biodiversity in their soil of any habitat and the highest biomass (and therefore carbon sequestration). Old growth prevents flooding, extreme wildfires, and produces clean air and drinking water. Logging old growth is a betrayal of the American people and our descendants, and I will fight to end the profits and careers of anyone allowing or engaging in it.

Hoelscher, Scott John	2024-01-19	
Modjeski, Jan	2024-01-19	
		Stopped destroying the old growth forest of America. We need these for us and with climate change they are never going to grow back like they were before. In southern Oregon Josephine county, a conservation group wanted to buy to stand of old growth trees that they are trying to cut down and the commissioners would not allow the sale to go to the conservation group but rather they want it cut by the timber group, so somebody needs to do something so these greedy people don't kill our earth even faster than they already are.

Holt, Steven	2024-01-19	From an ecological standpoint nothing is more sad than a roughly 200 year old country cutting the last few irreplaceable 400 plus year old forests.
Siebens, Heidi	2024-01-19	
Einolander, Shanti	2024-01-19	Please do everything you can to help protect our ancient forests. It has been proven scientifically that the forests are in truth connected as One Living Being. They need to be given the rights of personhood on a federal level. Please check out the decades of research and field testing by Dr Suzanne Simard at the university of British Columbia. Thank you for all you do!
Sirianni, Jasmine	2024-01-19	
Brewer, Anna	2024-01-19	
Howard, Paul T	2024-01-19	As a bow-hunter, backpacker, wildlife & wildland photographer, I would like to see an end to logging of 'Old Growth' everywhere. I'm 61 years old and in my lifetime the trend of loss of Old Growth is very noticeable and the effects it's having on watersheds, fish, terrestrial and avian wildlife has been a steady loss and we to stop degrading the planet's ecosystems. I served 8 years between the USAF and the USN and one of the things I value most about living in the USA is having intact places to be outdoors in. Tree farm monoculture land is not a long term ecosystem by any means and they are much more prone to fire and disease. Please stop the logging of Old Growth areas everywhere and stop the further loss of what we still have. Thanks.
Wise, India	2024-01-19	Yes! Please do everything within your power to protect old growth forests, the trees and the climates they create. All of our lives and the health of our planet depends on it! Thank you! ~India Wise ~

Weih, Jeffrey	2024-01-19	
Winter, Margery	2024-01-19	
Mount, Jean	2024-01-19	I understand that replanting after clear cuts does not result in a forest but a tree farm--- and that's if trees are planted and grow. We totally lose the importance of a biodiverse forest and old growth trees. Unfortunately, i know first hand the harmful impacts of clear cuts as two mountain are now sitting bare behind our home. A good plan i needed to retain mature mature forests.
Gavin, Jeannette p	2024-01-19	elder trees provide greater habitat above and below the earth. leave the old growth...humans should be more aware of their actions.

Gist, Mildred	2024-01-19	The Oregon Coastal Range is being cut down as I write this. You see I live near these forests and I see the trucks every day bearing these giants on their ugly backs. These old trees DESERVE to be protected NOW. We must move SWIFTLY to preserve what is left because the loggers love killing these old trees. I have known these men most of my life and I am TELLING YOU THEY LOVE TO KILL OLD TREES and MUST BE FORCED TO STOP. These terrible men care nothing for the environment; they are proving that every day. There is NOTHING SUSTAINABLE OR MANAGEMENT FOCUSED ABOUT DESTROYING FORESTS THAT HAVE LIVED FOR OVER 200 YEARS. May Father God help us and the trees. And, yes I pray that the sins of men who wantonly slay nature and those who do nothing shall be upon their souls.

Miller, Sequoia	2024-01-19	Dear Forest Service, With less than 4% of old growth forests remaining in the USA, their value is beyond measure, it can not be emphasized more that leaving them standing an in tact is of far greater importance than cutting them down for profit. Period. You cannot argue that old growth in tact forest is better cut down for profit than left for all the environmental reasons that we need such as carbon sinking trees. Thank you for listening to the public on how we would like to see these forest managed. Sequoia

		Now is the time to shift our unintentional destructive course to a healthy and bright sustainable future. Fragmentation will not do. In facing modern realities clear cutting, bifurcating lands and waters as a strategy for success has failed us and the wildlife. A critical element to this 'protection' is connectivity, the interwoven mosaic of habitats that naturally builds/grows in these ranges must have an undisturbed, unsevered path and free flowing access for the potential abundance of wildlife to disperse and provide those essential ecological services to attain life giving forces from these absolutely remarkable Old growth to late successional forests (& other successive habitats/plant communities). Ecosystems are built and supported by greater ecosystems, not to be forgotten, these intrinsic ties are to remain unbroken and be reclaimed by nature to again, channelize unity of all of the progressive possibilities, esp. for those truly longing for a greater success of thriving in full spherical harmony. We can do this!

Zauskey, Vince	2024-01-19	Logging in our country, particularly of Old Growth/Mature Trees, has been a decades-long battle that seems to continually not be resolved. The importance of leaving Old Growth trees and the forests/ecosystems/bio-diversity they support is of paramount importance because of our rapidly changing climate--and that includes catastrophic fires in recent years--resulting in the decline of critical habitats supporting birds, animals, clean water: entire ecosystems. I strongly believe we cannot wait any longer to protect the last remaining Old Growth trees that are not only important for their carbon content but also important for our human health and understanding of a much larger picture. Future generations, as well as current generations, should have the opportunity to study, visit and stand-in-awe of large trees and Old Growth Forests wherever they are found in the United States.
Potter, Dave G	2024-01-19	It is wrong to keep lumbering our small per cent of forest in old growth. Please stop doing this. Write 'cease old growth cutting' regulations in the new forest plan. There is great ecological values in leaving this 'old timers' trees standing in the forest. Too much of our, all American's, national forest acreage has been treated by Dept. of Agriculture as tree farms. Doing this leaves stump farms, slash piles and maybe eventually single species tree stands in regrowth. This bad new for many plant and animal wild species. And the stump farms are very bad news for water sheds that thousands of us need for water supply.

Dwyer, Diane	2024-01-19	The president called for an inventory of old growth and mature trees, to be followed by addressing threats to these forests. I strongly urge you to enact a durable policy that will protect these forests from logging. America must invest in protecting mature and old-growth forests.

Kelz, Lisa	2024-01-19	As you well know there is barely 1/2 % of old growth left in our entire country! These forests are irreplaceable, certainly in our time and maybe forever. The positive gifts these intact old growth forests provide the planet, in so many ways, far outweighs any benefit cutting them down could possibly provide. These forests are treasures that must not be ruined by shortsighted greed. You have the chance to do the right thing for our planet and all the future generations to come. Imagine a great grand child looking up at you saying... "you mean you had the chance to to save them.... And you didn't..." please listen, the world is in dire states.... So few deep green places left alone and they are needed!!! Thank you.
Dobush, Soyka	2024-01-19	I live in a high fire responsive ecosystem and our land has two borders with the Shasta Trinity National Forest. I wish to emphasize the need for managing forests to recreate old growth forest habitats as old trees are the most resilient ecosystem in fire country. There are plenty of unmanaged post harvest USFS and BLM lands that can be selectively harvested to allow for trees to age in a thriving environment. Please leave the old growth trees alive and strive to manage the unhealthy, densely overpopulated stands that were cut and clear cut over the past century (left unmanaged by the federal land stewards). I am an ex- USFS fisheries and wildlife biologist.

Lundeen, Brian	2024-01-19	
Simonson, Annette	2024-01-19	We already have plenty of forest lands designated for and devoted to timber production. We really shot ourselves in the foot during the rampant unsustainable levels of timber harvest in the past decades, shipping every third old growth log overseas. Gross overharvest, supplying an international market out of our beautiful PNW forests and short-term profit most certainly forfeited our future sustainable supply and local jobs. Now we are in a bind. Late Successional Reserves- LSRs-where much of the remaining fragments of native forests and older trees remain, must be conserved. Decades of scientific research and data have shown the multitude of other, long-term values of why we shouldn't be harvesting in old growth forests and LSRs. It is not only about species diversity, habitat, and watersheds. It is way beyond that-in terms of carbon-sink or climate change; we must look ahead.

Plambeck, Lorry	2024-01-21	Please stop Old Growth logging before it is too late. It is essential to help reduce the effects of global warming and as our heritage to our children who are experiencing extreme nature deposits in their lives. Thank you.
		Our remaining old-growth forests are national treasures, whose biological value vastly outweighs the value of any timber that will be extracted from it and dumped onto markets for pulp and lumber whose gross waste into landfills is disproof of any acute need for supplemental inputs from federal land. This exchange of a high-value biological treasure for a low-value commodity of wood pulp and lumber is the exact antithesis of serving the public interest with a basis in rationality, science, and moral common sense. Sadly, through some combination of administrative inertia and professional myopia, the Forest Service management teams continue to view themselves as on-call service providers to the highly subsidized local timber racket, and beholden to politicians who direct this mercantilist arrangement, rather than as public servants to all Americans. I urge you to promulgate a permanent and universal moratorium on logging old-growth forests. You are responsible for completing the Forest Service's long-tarried transition to responsible ecological management that includes genuine fire risk reduction through selective cutting of secondary stands, uncorrupted by countervailing industry motivations to grab the biggest trees.

Kelly, Maria	2024-01-21	
Herndon, Dan	2024-01-21	
Schümmer, Sue	2024-01-21	
Gilbert, Janet	2024-01-21	It is important to manage forests through a nature based solution which is not removing old growth and mature growth trees. Please manage forests as ecosystems and not lumber. We need these trees to aid us in the Climate Crisis we humans have created. Please don't harvest old growth and mature growth trees. Thank you for the opportunity to address this most serious situation. Everything we do needs to lesson the impacts of Climate Change/Crisis.

Honkomp, Mike A	2024-01-21	ITS UNFORTUNATE THAT PRESIDENT BIDEN'S ANNOUNCEMENT OF A PROPOSED NATIONAL FOREST PLAN AMENDMENT FOR THE IMPLEMENTATION OF EO 14072 EXCLUDED MATURE TREES FROM THE PROTECTIONS THAT WERE CLEARLY INCLUDED IN THE EXECUTIVE ORDER. I WOULD THINK IT OBVIOUS THAT THE VOLUME OF MATURE TREES EXCEEDS THAT OF OLD-GROWTH TREES, MAKING MATURE TREES AS VALUABLE AS OLD GROWTH TREES. BUT THE USFS EIS CAN, IF DRAFTED RESPONSIBLY, PREVENT THE TIMBER INDUSTRY DECIMATION OF US FORESTS THAT ARE A GREAT ASSET IN COMBATING CLIMATE CHANGE.
Nash, Robert	2024-01-21	
Tschann, Denise M	2024-01-21	Our natural resources; like clear running streams and drinkable water, and especially our old growth forests, are by far more valuable to the citizens and the climate than the dollars a few select corporations and their corporate leaders would siphon off with their for profit and regional destructive logging techniques. Second growth tree plantations should be harvested, but with better planning than the clear cuts of the past. Selective cuts and sustainable harvesting are successful and can be well managed for long term profit
PACE, LINDA A	2024-01-21	I recently saw a documentary about the post Civil War logging in Western North Carolina mountains which included the history of farmers who refused to sell their big trees and instead came up with other forest products that could generate income. We cannot afford to lose any trees to human taking in the Pacific Northwest--their are too few left for climate management now. There are many ways the forests can produce income other than as timber. There needs to be a moratorium on cutting mature and old-growth forests starting TODAY.
Toro, Ida	2024-01-21	Time to stop cutting down our forests. Yes "our" the people's forests. Climate change dictates the need to stop this process also the need for natural and wild places. Let's be better stewards!
Jilton Rogers, Sandra Jilton	2024-01-21	I currently live in Oregon, where old growth forests are revered and recognized for their contribution to fighting the climate and biodiversity crises. I also lived in Washinton state where I supported the same initiatives.
warmerdam, ineke	2024-01-21

Courtney, Gail	2024-01-24	
Mohler Mitman, June	2024-01-24	We are in the midst of a climate crisis and suffering massive losses in biodiversity. It is criminal to continue to log old growth forests. We have the responsibility to do our part to reverse global deforestation, by preserving old growth and protecting mature forest habitats, so that they can begin to recover and rebuild what we have lost. We need the ecosystem services and carbon sequestration that mature and old forests provide, more so every day, to continue to survive ourselves.
Bienick, Michelle	2024-01-24	stop cutting old growth now and forever!
Lynn, Yvonne M	2024-01-24	
Knight, Kathleen	2024-01-24	
Gray, Scott	2024-01-25	Enough is enough already!
Miller, Grant	2024-01-25	
Gardiner, Christine Perala	2024-01-25	The remaining large trees are our last hope of stabilizing the current climate chaos. Stop ALL industrial logging now. cpg
Camille, Emily M	2024-01-26	Thank you for seriously considering the voices and urgency of millions of humans fighting to save our environment. Because in reality, is there anything that matters more than that, without fresh air, clean water, and healthy forests... life on earth will perish.
Heidt, Barry J	2024-01-26	

Harris, Freya	2024-01-27	
Solowiej, Bartosz	2024-01-27	It's time to start planting sustainably so we have a structured stratified growth instead of crops that overgrow and burn.

Bizeau, Susan	2024-01-27	
Bresnan, Teresa	2024-01-27	We must keep our covenant!: "Genesis 1: God looked on the world & called it good not once, not twice, but seven times. Genesis 2: God commands all people to 'serve and protect' creation. Leviticus: God mandates that not only the people, but the land that sustains them, shall be respected..."
Skar, Rolf	2024-01-27	The debate over the management of late-successional forests and stand and old-growth trees has been going on in earnest for decades now. During that time, science has underscored the importance of conserving mature and old-growth characteristics across a wide range of landscapes. I urge the USFS to minimize or eliminate exceptions and loopholes for commercial logging across mature, late-successional and old-growth forest types for several reasons: 1. Introducing economic incentives can distort management decisions and impact other values 2. The vast majority of the US wood products industry -- and associated jobs -- simply no longer require access to mature and old-growth trees from federal lands 3. Other values such as watershed health, recreation, wildlife habitat and carbon sequestration - which are too often degraded by commercial logging - are only growing in terms of economic and social benefits.
Kim, Kailani	2024-01-27	
Alder, Marian	2024-01-28	Even though this email is a 'cookie cutter' approach, I want to add that any weakening of the proposed amendment will only demonstrate that 'dollars come first' when it comes to protecting the environment and reversing the very real threat of climate change. Thank you for paying attention!
Rubin, Ada E	2024-01-28	
Matinjussi, Valarie	2024-01-28	
Bengochea, Tora	2024-01-28	There are no jobs on a dead planet and we need every old growth and mature tree saved to save our lives!
Schumacher, Amy	2024-01-28	
Jones, Linda C	2024-01-28	

		<p>It is very important that them amended NWFP has protection of the remaining old growth trees from any harvest. Also, importantly, mature trees need to be protected from harvest as well so that they can become old growth. The way in which these older trees not only store carbon, but cause the watersheds to hold water, and to keep the land cool is crucial to the environment and our health and survival. Wildfire management would be a lot less costly if the older forests are kept standing so that they can do their job to moisten and cool the planet. Our area in the west plays a critical role in temperature regulation and the continued water cycle on earth. I urge you to dive deep into the science, using many peer reviewed studies, to understand and protect these trees, based on the scientific realities of what more they are doing to sustain this planet than just carbon sequestering. Just because that has become the popular topic these days about trees, does not mean that that is all they do. Without healthy standing old forests to do what they were created for, we are creating a hotter, drier, more fire friendly environment globally. Not to mention that the emotions from heavy logging is far worse than any popular carbon credits can balance out. Leave the trees alive, for the sake of the lives of everything on the planet, from microbes in the soil and fungus, to us humans. Our sources of fresh safe water are diminishing quickly due to the extreme loss of the forests globally. And here in the PNW, we have the possibility of curbing our ultimate demise, as well as the responsibility to recognize that we can greatly help to slowly restore the ecosystem's balance by fully protecting ALL of the remaining old growth, and much of the nutrients forests. It is our nation's duty to see beyond the instant gratification of monetary value in harvesting these giants, and to see the great long term Economic values of leaving them alive. Read the EPA's papers on the economic values of an intact watershed for example. It has been proven over and over, by various reputable sources, that the value of trees alive far exceeds the possible monetary value. Healthy local communities, families with abundant safe drinking water, moist, nutrient rich, fire resistant naturally functioning in tact forests, healthy abundant pollinators, fish and wildlife for just a few examples. In no way, should the NWFP allow any monetary gain from cutting a mature or old growth tree. If one has to be cut for scientific reasons, then it should be left to create a healthy forest floor, or put into a nearby creek to restore lost or damaged habitat. It is time now, to amend our previously poor forest actions, return to the ways of the tribal cultures; learn how and why to protect the old trees, so that they can protect all of us. Thank you,</p>
Kasner, Willow	2024-01-29	Willow Kasner

Tobin, Sara	2024-01-29	We have cut too much old-growth and mature forest already. Once destroyed, the resilient ecosystem is gone. Please rewrite the inadequate draft proposals so that they will follow the President's intent and will provide truly effective protection for old-growth and mature forests.
Tinker, Caroline	2024-01-29	
Wilson, Jan	2024-01-29	Protecting our older and maturing forests is critically important to me. It's why I moved to the Pacific Northwest decades ago and why I remain here. We have no hope of mitigating, much less reversing, climate change, which is already having such a profound impact all across the world, or addressing species extinction crises, without protecting our remaining forested habitats. Please, please do not let these rules become a green-washing law to allow business as usual - industrial logging (in concert with other industrialization in the 20th century) has gotten us to the mess we're in, and we should be striving to end it, not continue it to allow more destruction, eventually leading to our own demise and intolerable quality of life for our children and grandchildren. Please, for the sake of humanity, strengthen these rules to actually protect our older forests from commercial logging, without loopholes, and allow younger forests to grow to their full potential to become the ancient forests that will sequester the carbon we're still emitting into the atmosphere today. Thank you for your careful attention to this important decision.

LeClair, Michael	2024-01-29	Please, do the right thing for future ecosystem beneficiaries.
