CM

I did receive it and we have shared our resources freely. Thanks for the reminder though. We need to update the DR2 resources by including our autism/ADHD paper and tutorial.

I wonder if you might be willing to "infiltrate" the local autism groups. By the way, this week this month is autism awareness month.

So far, we have gotten tremendous publicity for the autism paper, and I expect more will be coming shortly. We both know that autism is only part of the spectrum of conditions people develop as a consequence of TILT, but I continue to think it is "the way in," given the rapidly rising rates. You might offer to present our paper to the North Carolina autism group. I'd be happy to be online and help field any questions. Just an idea.

I think "joining in" may be a good way to locate philanthropists in the Triangle or elsewhere who are interested in prevention (not just treatment) and who have funding for disseminating the QEESI and our tools (environmental house calls) nationally and internationally and supporting epi and mast cell research.

Hi Claudia, I found this in my drafts file and am horrified to think you may not have received it. If so mea culpa. I think they are still doing webinars.
Elizabeth

Dear Claudia Miller –

Your questionnaire [QEESI](#) was brought to the attention of the [NIH Disaster Research Response](#) (DR2) Program at the National Institute of Environmental Health Sciences. It's very impressive work! We would like to know if you are willing to give us permission to use and upload your toolkit so that we can share and make this available to other researchers through our DR2 Resources Portal.

- Sharing your resources and tools with the NIH DR2 Program enhances the visibility for others to identify and access your resources. The authorship and creators of the research tools are maintained as well as links to identified points-of-contact, as indicated. Additionally, publication of resources to the NIH DR2 website provides an opportunity for contributors to cite to the availability of their resources in the NIH DR2 collection as well as advertise and link to DR2 for their stakeholders, partners, and intended audiences.

We established the [DR2 Resources Portal](#) in an effort to facilitate data harmonization and integration among researchers. Our hope is that through contributions like yours, the broader research community may use similar data collection methods to create larger datasets, across a variety cohorts, to provide a deeper understanding of all of the uncertainties associated with disasters. We encourage you to consider [providing resources](#) (research protocols, codebooks, training materials, field guides, procedures, etc.) from your work to our repository, but we are also more than happy to curate your toolkit for posting on our website,

providing all the appropriate citations. The work you are doing is outstanding, and we appreciate your efforts of conducting important research in order to learn more about the health impact of disasters.

Please let me know if you have any questions and thank you for your consideration of this request.

Best,

Aubrey Miller, MD, MPH
