

Additional Comments on Forest Service Cooke City Fuel Reduction Project

I and my wife would like to add additional comments to those submitted by me on 7/25/24.

On 8/4/24 and during August of 2010, mudslides happened between my property at Bannock Trail and Barrett's at Bannock Trail. Debris was carried down the mountain side all the way to the Bannock Trail during rainstorms, indicating that the mountain side is unstable. We believe that cutting of temporary roads and conducting mechanical fuels reduction on the mountainside behind my property will make the mountainside more unstable.

Therefore we support the no action alternate to your proposal and are opposed to any mechanical fuels reduction or logging on the Forest Service property behind my cabin.
