2024-08-22 23:58:34	Jessie Turv	05434	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.

2024-08-22 23:29:26	Claire Lichti	N1H1P7	This is a pre written letter but I, Claire Lichti, fully agree with its contents and want to do what I can to demand the future of all human life on our planet. We only have one planet and we must protect it. \ Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Nature and trees have always brought me joy and comfort and it hurts to see the land that provides us with life being mistreated in this way. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future. Thank you for your consideration. Please, think of the air you want your grandchildren or your friend's grandchildren to breathe. Think of our burning forests and boiling oceans. Make the choice to be on the right side of history.
2024-08-22 23:29:20	Shauna Rowe	98201	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. 2024-08-22 22:57:13	Fitz Finger	38501	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-22 22:56:57	Michaela Marcum	37204	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 22:56:42	diane de rooy	98126	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. 2024-08-22 21:44:41	Autumn Marchand	95212	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.

2024-08-22 21:30:03	Daniel Hill	13068	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

We as a society have to think how our actions will affect the next seven generations. If we cut the old trees now the next generation won't get to see them and that's a crime against our children and our descendants now is the time to protect them so they can protect us from climate change. I'm a snowboarder I need the snow and if global warming keeps happening I won't have snow to ride on nor will my descendants. So please government protect the old growth forest money means nothing If there's no one left to spend it, we can't replace the old growth forest They hey are sacred.

I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 20:19:00	Lilliana Kulp	94536	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-22 19:23:16	Brian Bowles	95490	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.

2024-08-22 19:21:37	Ty Woodke	48468	Ayo! Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

Consult tribal and indigenous ways of fire management, the forest service needs their voices and you should create a space for them at the table. The forest service should serve the forest and we have enough knowledge and ability to do this for all future generations to enjoy the beauty and biodiversity of the old growth forests. We/you need to do better. I wish for no public forest land to be managed by the government alone, it has to include our voices and hearts too. I wish that public forest land would be left alone to be managed only for true long term low burning to keep it healthy as the tribes have done for generations. No commercial logging..period. Thank you. This is our land, not just the forest service agenda or serving commercial or political purposes.

Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 18:07:58	Erin Platner		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. 2024-08-22 18:01:44	Georgia White	60098	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-22 17:57:37	Georgia Anne Wilson	22206	Mature and old-growth trees and forests are powerhouses of ecosystem services. They provide shade, absorb water, increase moisture levels, improve air quality, reduce noise pollution, stabilize and preserve soil, protect wildlife habitats, mitigate the effects of climate change and provide documented physical and mental health benefits. A more pragmatic and visionary approach to milling is to plant acreage specifically for that purpose as many places in the world are already doing. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 16:56:36	Morgan Evans	17552	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 16:56:30	Jules Coleman	43203	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. 2024-08-22 16:56:10	Clare Nicoloff	22101	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-22 16:54:47	Scarlette Hofferber		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 15:47:19	Heidi Selig	02476	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldests trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-22 13:47:57	Jessica Ripke	89436	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-22 11:59:09	Kathy Lupardus	79707	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. On a personal note, these old growth trees are irreplaceable. To walk among old growth trees is an honor and they should merit protecting. Most of the county has never had the opportunity to do so. Please don't take this away from future generations. It is a part of our heritage and I would want to see it a part of our legacy. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1. End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 11:57:19	Lauren Newcomb	21090	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. 2024-08-22 11:50:50	Madison Huttinger	37138	I have a lot of love for the forests in America, and I've always dreamt I'd be able to bring my own children to see and appreciate the beauty and function old-growth forests provide to the land around them. I don't want to create a world where you can only see beauty like this in video games. I don't want something so wonderful and unique to earth to suddenly become unfathomable due to corporate greed. People deserve better. The earth deserves better. Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. 2024-08-22 11:07:09	Murray McCulloch	98244	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 10:02:46	Tyler Ellis	36542	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future. We should also be planting more trees to offset the laying waste of even our younger trees. Saving of and expansion of forests is one of the greenest methods we have of combating global warming. We have a vast amount of land development and new building taking place in the northeast. First they cut down the trees, then strip the soil for mega millions of dollars and then construct buildings full of chemicals which leech into our air and ground water. \nSo, please, save the trees we have and plant many more! Thank you.

2024-08-22 4:14:16	alexander hingston	TR11 3AU	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-22 1:11:28	Ecco Crockett	92115	Every time I see in the news that another ancient forest is being felled, it breaks my heart. I refuse to believe that the people who propose these projects represent the majority of humans, so I will not lose hope in us, but I will absolutely lose trust in the rich and hardcore capitalists. I truly believe that what few old forests we have are the last remainders of magic we have held in our world, and nothing but catastrophe can come about if they are felled. And thats not just superstition. Beyond the mental impact upon uncountable people, felling forests is the last thing we want to do if we want to keep living on earth. \nMature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-22 0:56:35	Sarah Gurule	93304	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. 2024-08-22 0:17:33	Garrett Key	97386	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-21 22:37:16	emma bell	54022	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-21 22:34:39	Brian Lerner	46220	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. "In addition to these fantastic points, I wish to share my personal experience with the topic. Growing up in Appalachia, I was practically raised by her verdant old growth forests. When I lived there, it was impossible to see for more than a quarter mile without having a forest block your view. It is with great sorrow that I must convey that these forests that I grew up in are gone, removed by clear-cutting for the sake of building materials and to free up the land for more property. Now, whenever I return to my home of southern Virginia, I'm struck with a deep sorrow as the trees I grew up with are no longer there to greet me. I am now an undergrad student of Environmental System Science and Environment and Natural resources at the University of Wyoming, hoping to someday pursue a career in forest management through conservation, so that my future children and their future children may enjoy the same heartfelt connection to our Mother Earth as I did. Thank you for your consideration.

2024-08-21 19:30:51	Elizabeth MacCaffey	73071	Hello,\nYes, the USFS should protect mature and old growth trees in our National Forests from commercial logging forever. Have you seen how few old trees there are in the UK? That's because they cut down the vast majority of their trees for commercial use. Now they have to rely on peat bogs to sequester carbon. Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-21 19:25:10	Peter Bowers	37923	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.
2024-08-21 19:23:02	Guinevere Matheis	03867	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. 2024-08-21 18:24:25	Garret Basiel	06422	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldests trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-21 18:23:09	Gwendolyn Wolney	14428	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.

2024-08-21 15:35:40	Oscar Pons	07311	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-21 15:34:31	Umang Tyagi	30518	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. 2024-08-21 14:30:04	Dave Johnson	90064	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-21 14:29:28	Luke Shafer		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. 2024-08-21 13:15:52	Maria Dahl	55082	As an incoming senior in high school, a participant in a new club that plants trees and promotes outdoor learning classrooms, and an advocate for environmental sustainability in daily practices, I hope to contribute as much as I can to keep our Earth healthy and combat environmental issues that we face. I hope that the government that protects me and our land has the same goals; to give back to what was once taken decades ago. This starts with the trees, especially those of old growth. \ Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. A few years ago I had the blessing of experiencing the great trees of Sequoia National Park. I would hope that any other tree has as much cherished beauty and protection as the sequoias do. To think that our country and world could be far from what it is now for the generations to come is devastating. I hope one day the children 50 years, 100 years, and further forward get to experience the great Sequoias like I did; not just videos or documentaries. But physically breathing in the fresh air they provide. Your draft proposal fails to protect these trees and forests. The proposal includes many opportunities to send these trees to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. It contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I support a policy for our national forests that will: 1.End the logging of old-growth trees and in old-growth stands where fire is infrequent. 2.End the commercial exchange of old-growth trees. No old-growth trees should be sent to mills. 3.Establish protections for mature forests and trees to increase the amount of old growth for the future.

2024-08-21 13:08:35	Maya Hammond	43214	This policy does not protect enough old growth forests. The humanitarian short term gain from cutting down these trees does not justify the cost of what would be lost. The majority of our land is already subject to intense harvesting. We cannot afford to take more protected space away. \ There is not enough protected forest in America. All that is protected must stay that way. With the growing climate crisis we need to be protecting more forests not opening them up for logging.
2024-08-21 13:08:30	Najeyah Altamimi	22201	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldests trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-21 9:56:24	Charlee Johnsen	08817	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-21 7:51:52	Tosia Przesmycka	03290	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. 2024-08-21 4:15:50	Annabelle Acutt	Po33 4bp	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

Please protect this precious part of our planet - the health of the soil, the rich biodiversity, and the inspiration it gives to many people is well worth it.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-21 0:51:25	Saran Jolly		Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. 2024-08-20 23:00:35	Marissa Mangold	32763	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 21:42:30	Andrea Leeds		Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldests trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1. The Forest Service must end the logging of old-growth trees across our national forests. 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond. You cannot eat money. We cannot continue to recklessly consume this planet. Itâ□s our home.
2024-08-20 20:17:07	Dan Delgado	55044	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 19:22:09	Riley Chan	V5X 3B7	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 18:32:08	Lindsey Anderson	95446	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond. \nThank you, \nLindsey Anderson

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 18:02:32	Dennis Morehead	80526	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldests trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 17:17:45	Kimberly Kreitner	80501	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 16:27:40	Margarita Llosas		Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 15:40:27	Ellie Horsnell	55811	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 14:58:24	Brenden Scaglione	67002	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. 2024-08-20 14:36:42	Shiloh Svancara	83201	Personally I don't know much about trees, but I know that it is one of the main sources of oxygen. They help regulate temperatures in the climate, and without them it will get hotter faster with global warming. If you haven't noticed, more crowded areas with barley any trees are the hottest. There is no reason to cut down trees for paper or more things to put in the world. We have enough trash, and if you want to make a change, why don't you help recycle and clean up trash around you. Reuse papers or cardboard. This ain't much but that's what I think about this.

No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 14:17:03	leone adami	62010	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 13:30:39	Rachel Kuras	98103	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 12:54:05	Jonathan Davis	29169	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 12:19:47	Basil Brennan	92887	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. 2024-08-20 11:53:47	Jaimie Bussiere	98283	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 11:15:01	Henry Anderson Stern	97211	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 10:33:39	Jordyn Walker	31701	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 8:59:59	Sarah Decker	48017	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 8:14:45	Peytom Bedford	46809	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 7:22:39	Ryan Parker	Hu51pb	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. 2024-08-20 5:46:48	Brennan Withers	94015	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-20 2:00:14	Seth Barash	20850	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.\nListen, I've been going camping for 11 years and the woods are my safe space. Whenever my anxiety gets the better of me I take a walk in the natural lands in my town and feel so much better. Please save the old growth forests.
2024-08-20 0:12:47	Alyssa Kloser	68118	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 23:21:01	Tammy King	01440-1505	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. 2024-08-19 22:16:31	Kimberly Atwood	49418	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 21:28:52	Kelsey Fuerst	32909	Protecting old-growth forests is crucial for several environmental, economic, and cultural reasons. 1. Biodiversity Conservation: Old-growth forests are home to a diverse array of species, including many that are rare, endangered, or specialized. The complex ecosystems in these forests provide habitat for a wide variety of plants, animals, fungi, and microorganisms that rely on the unique conditions found only in old-growth environments. 2. Carbon Sequestration: Old-growth forests play a significant role in mitigating climate change by acting as carbon sinks. They store large amounts of carbon in their trees, soil, and biomass, helping to offset carbon emissions. Protecting these forests prevents the release of stored carbon into the atmosphere through deforestation or degradation. 3. Water Regulation: These forests contribute to maintaining clean water supplies by regulating stream flows, reducing erosion, and filtering pollutants. The preservation of old-growth forests ensures the protection of watersheds that provide drinking water and support aquatic life. 4. Climate Stability: Old-growth forests help stabilize local and global climates. They influence local weather patterns, contribute to cooling effects through transpiration, and play a role in maintaining precipitation levels. 5. Cultural and Spiritual Value: Many indigenous peoples and local communities have deep cultural and spiritual connections to old-growth forests. These areas often hold significant cultural heritage, serving as sacred sites and sources of traditional knowledge and resources. 6. Scientific Research: Old-growth forests offer invaluable opportunities for scientific research. They provide a baseline for understanding natural processes, including forest dynamics, species interactions, and the long-term impacts of climate change.
2024-08-19 21:28:35	Savannah Quinn	30507	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 20:23:02	Elodie Brunelle	JOL2K0	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 18:41:33	Shelby Page	98284	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 17:55:37	Chloé Spitaels	Mulle 9700 Bel	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-19 17:10:57	Deborah Singer	98011	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill.
