2024-08-19 17:02:04	Abby Wilson	78130	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 15:31:49	Paul Salernos	53151	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 14:23:58	Kimberly Nick	20874	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 13:13:07	Emily H		Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-19 11:29:17	Molly Ulrich	60901	Hello, I am writing to encourage strong protections for mature and old-growth forests on federal land via the National Old Growth Amendment. Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond. Thank you for your time reading this, and I hope you will consider the wellbeing of our forests systems and planet.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 10:28:52	Sarah Zendle	85281	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldests trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-19 9:47:01	Aliza Yair	98051	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 9:05:55	Zanae Banks	44111	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. 2024-08-19 8:17:06	Erin Hodges	49341	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-19 7:31:48	Geri Gajewski	04106	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 5:34:43	Simra Khan	221001	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 3:33:49	isabella reader	19808	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 2:09:01	Ariadna Norberg	98107	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 1:10:35	Madison Black	85742	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-19 0:23:51	Jaina Rosemeyer	99223	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 23:40:29	August Kauzlarich	76028	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 22:53:38	Caden Bracken-Sorte	92617	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 21:49:51	I O		Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 21:11:50	Kitt Starkie	11721	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 19:45:09	Deni Woodard	95632	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 19:06:10	Antonio Steeple	80252	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 18:14:26	Connor Argenzio	49546	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. 2024-08-18 18:09:22	Elissa Winsett	76123	The Comfort of the Woods by Amos Russel Wells Full Text I understand my comrades of the woods, And they know me completely. Not an oak But is my brother, strong, reserved, sincere. Along the happy, peaceful forest ways That wind so intimately through the trees I hold a calm communion with my friends, The pines and gentle birches. Day by day Insensibly the bond is closer drawn With beckonings of branches, waftures Of subtle fragrance, melodies of birds, Flickers of sunlight on the level leaves. A thousand sweet enchantments pure and good.
2024-08-18 18:09:11	Harshitha Talasila		Protect our trees and our environment. We need these trees and the forests they make up as we move forward and continue to face the impacts of climate change. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 17:40:48	Spencer Keithley		Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 17:06:46	Sarah Bullock	22193	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 17:00:45	Jasmine Mack	90041	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 16:34:10	Talia Jeffrey	97236	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 16:17:11	Laurie Beth Kesterson	45405	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 15:38:57	Elyssa Serrilli	01004	I Love the Trees. I mean, I really love the trees. Non one does what they do - clean the air, hold the soil, make habitat for thousands of species and millions of individuals , Reduce flooding and create describable beauty. And old trees do it better. \ Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 15:38:45	Anna Goncharova	98354	Mature and old-growth trees and forests filter drinking water for communities. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 15:19:32	Mark Savage	66503	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. 2024-08-18 14:59:37	Brianna Gutierrez	92507	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond. Thank you!

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 14:35:06	Stephanie Marino	19468	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 14:07:14	Nicholas Manela	99003	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 13:55:04	Erin Putney	68504	Save our future by saving or past! \ Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 13:53:42	Adam Hardcastle	46106	I spent much of my childhood hiking and camping in the woods of southern Indiana and Kentucky. Some of my favorite memories are surrounded with massive, old trees and dirt trails. Everyone should be allowed to experience the joys of hiking and camping, and destroying the oldest forests of our nation does a disservice to the people and the beauty of the country. Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. Mature trees are impossible to replace effectively. They are a dying resource and should be protected because we do not have the time or existing stock to replace the quality wildlife habitat they provide.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 13:39:44	Arden Seville	93004	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 13:15:07	Cindy Magee-Nieves	83338	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 12:27:45	Rachel Lewis	10576	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 12:00:51	Manuel Guerrero	91741	Mature and old-growth trees and forests play a crucial role in filtering drinking water for communities, providing habitats for wildlife, and mitigating climate change by absorbing and storing vast amounts of carbon each year. These trees and forests also enhance ecosystem resilience to wildfires and help regulate forest temperatures. However, these invaluable forests face significant threats from climate change and commercial logging. Cutting down our oldest trees robs Americans of the numerous benefits, beauty, and grandeur that these magnificent trees provide. These trees hold far greater value standing than they do as timber.The proposed National Old-Growth Amendment presents the Forest Service with an opportunity to protect our mature and old-growth forests, but the current draft falls short of fulfilling this promise.The policy proposals contain numerous provisions that would permit the Forest Service to log old-growth trees and send them to mills. All of the proposed alternatives allow agency staff the discretion to manage old growth in a way that could lead to its decline, under the guise of "proactive stewardship." Additionally, the proposals include ambiguous language that could justify continued commercial logging of old growth in the Tongass National Forest. None of the alternatives provide adequate protection for our oldest trees and forests.To earn my support, the final amendments must address these shortcomings by:Prohibiting the logging of old-growth trees across all national forests.Ending the commercial exchange of old-growth trees harvested from forestlands managed by the agency□□no old-growth trees should be sent to mills.Establishing strong protections for mature forests and trees to ensure an increase in old-growth forests for future generations
2024-08-18 11:58:05	Mary Ludwick		Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 11:39:51	Adeline Lagerberg	80120	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 10:47:34	Ema Sun	95113	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldests trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 10:04:32	Alyssa Haberman	32608	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. I just think it is super important for trees to be protected with the amount of them that are already being cut down. These trees provide a rich history and so many benefits to the environment. It's unethical and damaging to even think of cutting them down.

2024-08-18 8:55:09	Samantha Thomas	65742	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

2024-08-18 7:40:39	Lisa Schulze	53783	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 5:46:42	Raisa Saka	13730	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 3:31:00	Melie Duret-Belfort	74939	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 2:19:10	Abigail Deegan	75460	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-18 0:31:37	Saanvi Aima	10027	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond. Please keep our old forests here, they deserve to outlive us.
2024-08-17 23:21:12	Daniya Salkhanova	50000	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.

They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
2024-08-17 22:39:49	Vitoria Nazareth	4263200	Mature and old-growth trees and forests filter drinking water for communities, are homes for wildlife and protect our climate by absorbing and storing tons of carbon every year. These trees and forests also boost ecosystem resilience to fire and help regulate forest temperatures. Threats to our mature and old-growth forests include a changing climate and commercial logging. Cutting down our oldest trees deprives Americans of the benefits, beauty and majesty of our largest, oldest trees. These trees are worth more standing. With the proposed National Old-Growth Amendment, the Forest Service has an opportunity to protect our mature and old-growth trees; but the current draft proposal fails to do so. The policy proposals include numerous opportunities for the Forest Service to cut old-growth trees and send them to the mill. All of the proposed alternatives allow agency staff the discretion to manage old growth out of existence in pursuit of "proactive stewardship" goals. They also contain ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass National Forest. None of the Alternatives proposed would protect our oldest trees and forests. For me to support these amendments, I consider it necessary that the final amendments address these deficiencies: 1.The Forest Service must end the logging of old-growth trees across our national forests 2.The Forest Service must end the commercial exchange of old-growth trees logged on forestlands managed by the agency. No old-growth trees should be sent to mills. 3.The Forest Service must establish protections for mature forests and trees to increase the amount of old growth for our children and generations beyond.
