David	Kalman	Berkeley	94603	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Armani	Allen	Berkeley	94720	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Autumn	Radcliff	Berkeley	94720	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.

Griffin	Santa	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Sareena	Garg	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. Shea	Tran	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging.

Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills.

Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow. |
| Priya | Bhakta | Berkeley | 94704 | As you consider new policies to protect forests, they must protect our oldest trees from logging.

Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Varun	Vaidya	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.

They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Toby	Heeder	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Aster	Bazyouros	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. Karla	Morales	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Abbygail	Nieves	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Leopold	Johnson	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.

Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Jonathan	Arango	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Dylan	Wu	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. Tina	Huang	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us. Logging old-growth trees should be incredibly rare and no old-growth trees should be sent to timber mills. Please enact durable protections for mature trees and forests as well as for old-growth. We have very little old-growth left and the only chance we have to restore what was lost is to protect our mature forests so that they can grow.
Jacob	Landman	Berkeley	94704	As you consider new policies to protect forests, they must protect our oldest trees from logging. Old-growth trees are the backbone of the ecosystem. They help filter the water in the creeks and streambeds. They absorb pollution from the air. They create shelter for wildlife. And they provide shade and a beautiful sight for us.
