Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Besides their great beauty, we need our forests to clean the air and help us breathe

They are a place relax, to picnic, to mend my heart.

Thank you,

Constance Garcia-Barrio
Philadelphia, PA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Did anyone not say when you see a 500 year old tree how majestic it all is.

The beauty of a forest and the animals and insects and plants are a natural wonder . Man should be able to join that wonder but instead we destroy the natural world and now we see the harm but still we are not smart enough to preserve it. It is the nature

For me it is the nature it provides. Just last night I read a clipping how manure from animals should be cleaned up it was so unreal to me as over the years I should probably be living on a hill as there have been so many animals that have lived here .

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

More trees, more carbon sequestration. What part of their fancy educations are they lacking, to understand that this is a necessity for the survival of our planet?

They are an escape from, what can be, a miserable world.

Not certain communally but personally, the environmental impact would be devastating.

Thank you,

Carol Book

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please save the national treasures

It's peaceful to walk amongst the trees. But it's also habitat for many plants, animals and insects.

All beings have a purpose. Destroying the forests cause harm to every living creature. It takes habitat away from some creatures which causes chain reaction in harm to others that depend on those creatures/ habitat. And that ripples out to cause proble

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Protecting older trees makes sense for the whole ecosystem . Clear cutting never makes sense and is completely wrong and causes bad downstream effects .

Everything . Forest bathing started in Japan to bring joy and focus back to workers lives I just learned . Wildlife need the protection of the land and humans need to see trees and be part of nature to thrive from young age to old . This is a no brainer

Pollution , depression , anxiety would occur if no forests are preserved . And we would see more suffering of wildlife too who are the innocent in the matter of destruction of woods .

Thank you,

Valarie Vukelic
Gibsonia, PA

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This seems like something we shouldn't even have to ask for. It should already be in place that we save what's left of mature growth trees.

Thank you,

Randi Coen

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Trees help the environment; they clean the air. They are nature's air conditioners, to provide coolness in the heat. Trees help to prevent erosion. So, yeah, why are you chopping trees down?! For the dollar bills yall. I say, piss on you all.

I love looking at trees; gazing at a tree's bark pattern and feeling it is so relaxing. I talk to the trees, especially when I decorate them at Christmas... I tell them how pretty they will look. Why must we destroy the homes of animals?

I went to college in Tioga County, PA. In the late 1800s, logging companies destroyed the area. PA had a "dessert" per Joseph Rothrock, a botanist at University of PA. He said that we need to "combat humanity's 'tree destroying instinct.'" This was writt

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in feder

We're doing our part by protecting our 17 acres, including some old growth trees at the edge of state game lands. These areas are so important!

Green, cooler shaded areas serving as habitat for other species as well as eye candy for humans. These areas help biodiversity and moderation of climate change.

Thank you,

Luann Stubbs
Mt Pleasant Mills, PA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Let's decrease flooding in many areas by protecting mature trees from being wiped out by clear cutting.

They clean the air, provide anti-flooding protection to many areas and provide habitat for many animals that are being pushed out of their homes by over development.

It would cause major flooding in my state and increase air pollution.

Thank you,

Diane Andrade
Cranston, RI

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I support the efforts of the U.S. Forest Service to amend every national forest plan in the country to protect old growth. The proposed amendment must protect all existing old-growth. In addition, it must allow mature forests to develop into old growth

Thank you,

Stephen Idem
Monterey, TN

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Trees are so important and wonderful to keep and protect.

Thank you,

Emily Gjertson
Brighton, TN

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

They are the lungs of this planet. Without them no other living things can survive.

Devastating loss for our grandchildren! Irreversible climate disasters especially forest fires will make it unlivable.

Thank you,

Beatrice and Stanislaus Ting

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

America's forest giants belong to her people... Not for the lumber they contain, but for the shade they give and the history they've seen. They are not for sale.

I was raised in East Texas... I have watched the canopy grow thinner and thinner as people harvested "trash trees" like native pines, and cleared land for ugly development and quick profit — Destroying the native ecosystem and watershed in the process.

My childhood is full of secret places, surrounded by green and living things. The older the forest, the more magical.

These places, these trees, are disappearing. They are necessary for quality of life, and for beauty of spirit. Where I was raised, you c

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Ancient trees are disappearing rapidly across the earth. This must stop. Federal lands belong to the people, and people need the trees alive and well for our own future. Stop all cutting of old-growth and mature forests!

Trees clean and cool the air. They keep the soil healthy, and in place. They provide habitat for thousands of other creatures. Sitting amongst them rejuvenates the spirit, engages the imagination and calms the heart.

If all old-growth forests on earth disappeared, it would do huge damage to the earth's ecosystems. It would GREATLY increase the negative effects of climate change. It would cause the extinction of millions of species. Any human community would be badly a

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Destroying old growth forests makes no sense. They do so much for our and nature's well-being.

Going into an old and well-kept forest is like having a religious experience. To me, the trees are almost like living beings. I have heard that trees communicate with each other. They are homes for nature.

Getting rid of them would be taking homes from the animals and birds. It is a filter for the air we breathe. Why should we cut them down just to satisfy the greed of some companies?

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

It's a no-brainer; protect the hood that is already in place,so they can votinue to do the good they were created to do.

to do

to do.

Majestic goodness,beauty, harmony, strength, solitude,

Continuity.

Nature blesses is. There would be a great void.

Thank you,

Ann Sever
Houston, TX

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

People from all over the world come to see our beautiful national parks. The huge old trees are so important to the biodiversity of our forests. Please protect them from clear cutting and logging.

Thank you,

Jennifer Jones
El Paso, TX

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please, please save the trees. A forest is the most calming beautiful place for many people. For hiking and camping it cannot be beat! Please save the trees, they do keep us alive.

Thank you,

Linda Little
Cypress, TX

STOP cutting all trees!!!! Our forests are suffering not only because of damn greedy parasites are cutting them but because of damn climate change caused by filthy dirty disgusting fossil fuels.

All forests clean the contaminated air and supply us all with clean air. I have seen pine trees in the backyard and I notice every time that it gets super windy I see the dust that the trees have collected.

I wouldn't even want to think of it. The greedy parasitic monsters cutting down old-growth should stop this madness. They should punish them because of the fact that they are contributing to climate change.

Stop old-growth trees from going to the mill. There is broad agreement that what we have left is too precious to cut.

We need them for our wellbeing and that of our planet. Forests absorb and store carbon -- in soils, organic matter, and living and dead trees -- better than any other ecosystem. Generally, older trees absorb more carbon each year than their younger counterparts.

The planet will get hotter and less likely to sustain life as we know it.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There is so much we need to do to protect our world & our lives. Protecting our trees, our forest, our environment is essential for this to happen. Nature is a balance. Upsetting that nature can create & does create a powerful response.

The first thing I looked for when moving into an area, were how many trees were there. Trees are so important for the survival of the human race. Please do what you can to protect our forest.

It takes years, even centuries for a tree to become "old-growth", with its tall majestic branches & limbs providing us shelter from the harsh rays of the sun, helping to cool our planet down. Please listen to the wind speak.

Thank you,

Lybo Buchanan
Dallas, TX

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We need the old forests. They provide so much and take a very long time to grow. Not everything in nature needs to be destroyed.

Thank you,

Robin Rogers
Gober, TX

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

It is extremely important to preserve these areas for future generations and for the beauty and health of our planet.

So much! Clean air, humility, beauty, species protections and homes, a place to retreat.

If all old growth forests disappeared, the effect on our planet and our lives would be devastating. Not only would we lose an excellent means of capturing carbon, we would lose the beauty of these tranquil, majestic places, the animals that inhabit them

Thank you,

Patty Becnel
Ogden, UT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Just like in people, we protect our elderly. We need to do the same for trees! Protect these mature trees that serve as shade for the young, housing for the wildlife and valuable seeds/roots to keep producing more trees.

They are my happy place! the awesome smell and sole eco systems that lay around every bend is a quiet retreat from the loud bright city.

When old growth dies, wildlife in the area is negatively affected. Young trees loose the subtle shade to aid in their growth. It changes the entire micro ecosystems of the forest when they are removed. Not only do I love to marvel at the huge mature trees

Thank you,

Amber Lamph
American Fork, UT

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth is too important for diversity to be lost.

Everyone needs to understand that forest resources are limited. You can cut it all down but you will be in the same place as taking action to protect old growth now. Not that long ago Ireland stripped their lands of forests, realizing too late -- ooops!

Think of the loss of diversity!

Thank you,

Connie Ball
Kanab, UT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests offer unique ecosystem functions and are carbon sinks - we should be saving all that we can.

Thank you,

William Belknap
Leeds, UT

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

They are places of refuge, sources of quiet contemplation, and bring enhanced physical and mental health to me and many others who spend time in them.

This would adversely affect our quality of life, disrupt pollinators and the ecosystem at large, and accelerate climate change. Once these treasures disappear, they would be gone forever.

Thank you,

Daniel Heim

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Many studies show old-growth forests support important "ecological undertakings" that young trees and shrubs do not and can not because of their youth. Lumber value is only one aspect, of many, of the value of old-growth and younger forests.

I am a "tree-person", and have been for over 75 years, having spent much time in NH forest and rambled through suburban NJ forests and undergrowth.

My present, retirement community is surrounded by a narrow band of forests and shrubbery. Without them, it would be hotter, boring, and less eye-appealing to my way of thinking.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Mature forests provide stable habitat for many flora and fauna species. Cutting these forests often result in invasive species taking over and eliminating biodiversity.

A mature forest is a place where nature thrives. It provides a place for peace and serenity for those who wonder into it. It also helps reduce man-made carbon pollution.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We need as many trees as possible to stay the effects of too much CO2.

They mean shady calm

It would be awful. They are the largest. And, it would just look tacky to have to replace a 2,000 trees

Thank you,

Emily Pfister
Buena Vista, VA

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I have done a considerable amount of hiking in the old growth forests remaining in Idaho and Montana. They are magnificent and an inspiration that future generations should be allowed to experience.

Thank you,

Paul Council
East Calais, VT

The United States Department of Agriculture (USDA), Forest Service

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I would think we would want sustain our old growth forest as long as possible for they are habitat for many species of birds, animals and insects. They also help when it comes to climate change.

Thank you,

Catherine Cooke
Burlington, VT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Mature trees the older the better sequest carbon and allow the most biodiversity. We much protect old growth forestss so they can nurture the younger forests around them. No logging for Old growth they are still way too rare to be cut down.

Forests and trees provide protection, carbon sequestration, impact the climate positively, provide serenity and renewal for humans and protection for rare plants and animals.

It would be so sad to have only young forests, Our knowledge would be cut off, and the young forests would not do as well without seeds and soil from older parts of the forest growing out and taking over the younger forests.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Life! For everyone and everything.

Death.

Thank you,

Jeannie Keyes
Renton, WA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are life. While there are definitely economic incentives to keeping forests, forests also represent freedom and connection better than any replacement can provide.

If old-growth forests disappeared, everybody would lose. Between recreation, water purification, flood prevention, erosion control, and carbon sequestration, old-growth provides services that cannot be feasibly replaced.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

As an academic person for over 50 years, I strongly support protection of the old forests, as the way to prevent climate catastrophe and biodiversity rapid decline, and this way save our Planet.

One of the critical pillars of the natural capital - the foundation of life on the Earth.

It will be a big step towards acceleration not only destruction of the basic ecosystems - carrying capacity for life - but also human civilization.

Thank you,

Zbigniew Bochniarz
Bellevue, WA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

For current and future generations of all species, the U.S. Forest Service must focus on choosing lives over money and industry.

Our trees are essential to our lives, particularly as temperatures rise. I notice this whenever I am in space where pavement and clearcuts are more prominent than the space on my road, where Weyerhaeuser no longer cuts.

When it comes to land clearing and increased roads and housing, it has been a down-hill slope for generations now, but it is not too late to stop the deterioration of air, soil, and water quality.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I have grown up in Washington State which is blessed with forests and tall trees. However, over my lifetime (I am 72), I am increasingly appalled at the huge clearcuts and especially the destruction of our few true Old Growth Forests. A 100 year old pl

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I write to you as a Christian who values our natural world as God's creation.

The forests support myriad species and are important to their survival. They are also a place of renewal and recreation for us. Also, they sequester a lot of carbon and we need every strategy to address the climate crisis.

Without forests, many species would dwindle or die out. Also, the climate crisis would accelerate. And we would lose that place of refuge for our own rejuvenation.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old-growth, mature forests MUST be protected...and 'not' for their timber....but for the fact that they pump out HUGE quantities of O₂ into the atmosphere in the fight against the climate change crisis!! So instead of 'not' protecting old growth forests,

I "love" them---not only for their climate change protection, but for their beauty and animal protection(!). We need even MORE forests---not by any means, 'less' forests(!).

If they were to 'disappear', then climate change would "win" and we'd be wiped out and off the planet!! We MUST keep old-growth forestsAND plant even more forests!!

Thank you,

David Scheer

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old Growth Forests are necessary for sequestering huge amounts of carbon, providing habitat and shelter, maintaining soil stability, managing erosion prevention, providing riparian health and countless other benefits to our well being.

Thank you,

Don Williams
Olympia, WA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests are one of the few places in the US where I can experience oneness with nature and feel my place in the universe. It is like a religious experience for me and nurtures me physically and mentally. There is so little natural wilderness

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests maintain a web of life that is needed for plants and animals, humans included. Mono culture forests are nit a substitute.

They cleanse the air and protect the soil and a the home to many plants and animals.

Forestry for profit is everywhere in the Pacific Northwest. We need to protect the remaining old growth forests. Otherwise many animals will loose their homes and humans will loose touch with the historical real world.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old-growth forests need your protection

I am lucky enough to live among old-growth trees. These magnificent living beings must be preserved for future generations to marvel at.

The landscape where I live would be denuded and invasive plant species would take over. This has happened in cleared areas. One preserved area (saved in the 1970s by the mighty efforts of determined conservationists) brings tourists and dollars.....

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Our forests are burning because we have not cared properly for them. They are the lungs of the planet. Without trees, especially our oldest trees, we are without any effective way to reverse climate change. Please husband our trees not sell them off.

Forests provide oxygen, quiet, and beauty. These we can't survive without.

The dry undergrowth fuels wild fires. Mature trees shade the forest floor, protecting from undergrowth and wild fires. Billions of trees are needlessly burned up due to mismanagement of forests.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please help protect our forests!

When life becomes too much the forest is there for me. I feel my worries slip away while walking through the woods. I spend time meditating while resting on tree stumps. I need the forest for my mental health. I feel most at peace in the forest.

I wouldn't be happy without forests. The big trees are so humbling. They are such a gorgeous sight.

Thank you,

Melissa Dewitt
Menasha, WI

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We need trees to live on Mother Earth!

Thank you,

Sirena Bertelsen
Eau Claire, WI

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This will help our forests recover after the Savage Run fires & protect other old growth forests critical to maintaining healthy eco systems! Excellent work! I did some medicine work with an old growth forest near new growth clear cuts at a place I spent

Thank you,

Amy Crowell

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We have a responsibility to protect our old growth forests. The reasons could fill page upon page. In addition to the esthetic beauty, these forests provide crucial habitat for animals of all kinds.

We are learning more about mycelium, roots struct

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

It is remarkably difficult to come across old-growth forest while exploring the mountains of southeast Wyoming; this is in part due to extensive logging for over a century, as well as devastating beetle kill and massive wildfires that have devastated our

Old-growth forest is critical for sustaining healthy ecosystems, facilitating outdoor recreation, and supporting our local economies.

Thank you,

Spencer Hurt

Dear U.S. Forest Service,

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the
climate crisis and biodiversity loss.

We can grow other trees for wood and paper. Leave the older trees alone!

Animal habitat and a place to recreate.

Thank you,

Michelle Stewart
