Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old-Growth Forests Make Good Sense

Their inherent/intrinsic value is enough for me, but as I travel to other countries and experience the clean air and water they have, it becomes even clearer to me the need to preserve these natural places.

Peace, air pollution, quality of life...so many ways we'd all be impacted.

Thank you,

Linda Broadfoot

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth trees can't be regrown in our lifetime, or our children's lifetimes, or grandchildren's lifetimes. Please preserve this unique heritage for us and those who come after us.

In Iceland, they have so few forests, they call a small stand of trees a "forest." We are so fortunate to have trees in North America, and should preserve them.

Trees are inspiring and are home to many creatures. It would be sad and harmful to our world if we lost them.

Thank you,

Laurie Borman

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The rich habitat of old-growth forests sustains a wide variety of plant and animal species while at the same time moderates temperatures by absorbing sunlight. We need the life systems of the forest now more than ever.

I live in a forest. I could not ask for a more wondrous place to live.

My heart would break if all the forests disappeared. And of course we probably would not survive such an extreme ecological disaster. Human beings really have no idea how much we need to live WITH all the species of our planet.

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The story is, by 1930, the enormous ivory billed woodpecker was hovering on the brink of extinction due to habitat destruction as North American lumber was removed for housing. But there was a safe zone in swampy Mississippi, on an unlogged area where a fe

Diversity, seed bank, habitat, air, beauty, promise for the future.

Losing our old growth forests changes local temps, humidity and weather. Critters lose habitat, we lose shade and soil. We lose the diversity in the seed bank, the genetic remnants and one-offs that will be the things to survive in the changing climate.

Thank you,

Judy Owens
Bloomington, IN

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This should be common sense. Others will write more eloquently than me. Please don't cut down our most majestic and historic trees that are most often found in old growth forests.

Peace, Protection, Recreation, and Relaxation

If our old-growth forests disappear, it would mean we lose touch with the rich history that is embodied in a tree that has a life span longer than our own. It would be a sign that our society cares more about short-term profit than long-term economic gain

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Trees have incredible value for all of us - health, economic, aesthetic, spiritual. Human beings have a right to healthy forests.

Forests means so much to me. They are beautiful, they keep our planet and climate in balance, they are magical and spiritual. I want these special places to be here for my kids, and their kids, and all future generations.

Imagine a world without forests or old-growth forests. We have a right as citizens and as human beings to protect these - they are not disposable!

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

It takes many years for a tree to mature and only a few short minutes to destroy it. Please protect our forests.

Thank you,

Angela Menard
Emporia, KS

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old Trees and forests have a right to live! Their existence is more important than humans' need for money. (And we need the oxygen they create too).

Happiness. Being in or near a forest makes me feel content, peaceful, healthy, and wise - I feel like this is the place where I and we belong.

What a horrible, sad, and even depressing thought! We must protect them. Forests, and the wildlife in forests, have a right to live out their lives in peace.

Thank you,

Sandra Rippetoe
Harrodsburg, KY

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Our forests are not for profit. They were here long before us and god willing will be here long after us. Old growth forests are pivotal to surviving the climate shifts humans have caused. We need them more than ever. Please do a better job of protecting them.

The future and our survival

It would drastically reduce the chance that humans will make it through the climate shifts we've caused. It would mean dirty air for us to breathe, more storms that destroy our homes, loss of biodiversity that leads to food shortages and lack of needed medicine.

Thank you,

Hillary Day
Louisville, KY

Trees supply half of the oxygen we breathe unless, of course, you'd be willing to go without oxygen for four or five minutes. I also prefer my oxygen to be clean. Of course trees take care of that too. Lumber companies need to be growing their own trees

Intact soil, clean air, oxygen to breathe, reduced CO₂, supports wildlife diversity through habitat protection, lower temperatures.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

One of the most amazing things about living in our country is its wildness

I do not live in a wild space, and I miss being in it every day I don't wake up there.

In Louisiana, there are only a handful of old growth cypress in the state. In the 1930s, privately held forests were completely denuded, and we lost so much diversity

As humans continue to live in a digital world, we must get outside to preserve our contact with who we are. We are a part of this Earth. We must have wild spaces to allow wildlife to thrive, so our children can inherit a better planet than the one we leave

Thank you,

Elizabeth T Ledet
Metairie, LA

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Climate scientists have clear evidence that we must stop deforestation to reverse climate change. We must save mature and old-growth forests to save our children's future!

Forests are crucial to me personally for the mental health recharge when I hike there. Forests are also essential for clean air and water, carbon draw down, biodiversity habitat, and more!

Deforestation makes the land and water unfit for human survival. You are killing our future by cutting the forests!

Thank you,

Melissa Brown
Newton, MA

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Considering the severity of the climate crisis, it's astonishing - and dismaying - that old growth forests could even be considered for logging. After all, old growth forests provide numerous life-supporting benefits: they serve as excellent carbon sinks;

Everything. Life, joy, habitat.

I would be very depressed. I'd be much less interested in hiking with friends and family.

Thank you,

Stuart Heebner
Dorchester, MA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Dear Forestry Service,

Please change your philosophy that clear cutting mature forests is good for the forest, for the planet, and for the people of America for whom our public lands are a national treasure, unique in the world. It is heartbreaking to see

Forests provide solace and connection to nature and the larger universe. Their contribution to our well being should be treasured. Please leave the forests alone! They can teach us a lot about resilience!

It would break my heart, and leave me sad that we have taken this treasure from future generations to appreciate and learn from.

Thank you,

Marilyn Ray Smith
Brookline, MA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests have given us life for millennia, we must now do all we can to give back to them. For their own sake. And for continuing life on earth.

They are our ancestors, they foster more forms of life than imaginable. And yes, they are THE best way this planet has for storing carbon!

Every healthy tree, left to fulfill its natural lifecycle, gives life to other plants and animals, including us. Killing them would be killing our future grandchildren.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Mature and Old Growth Forests protect our climate and essential biodiversity, including in the soil. Intact forests provide wildlife habitat, vital environmental services for humans by mitigating air pollution and increasing resilience in addition to cle

Forests are a refuge and a home for life on earth. They are a community that supports a healthy planet, regulate the weather and climate, support water and soil cycles, and make life possible for all of us.

Old Growth forests are remnants of intact earth systems. We need to grow them. Losing them sets us back decades, perhaps irretrievably, if earth's systems shift too much, and too many pieces of the intact ecosystem are lost. This will make the earth a

Thank you,

Susan Thomas

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Natural spaces are a source of pride for many communities and for visitors. Protecting old growth and mature forests should be a source of national pride, another great American heritage to show off.

Forests are spaces of wellbeing and of connecting to the world around me.

If old growth disappeared I think I would lose that sense of pride and wonder in the natural beauty of this country.

Thank you,

Abigail Miller
Boston, MA

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please with all the invasives that are everywhere it is most urgent to protect our old growth forests!

Thank you,

Ute Williamson
Lancaster, MA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Protecting these trees is the same as protecting your family. No one aspires to cut down their family. We need to be responsible, dependable and accountable for these living legends. These trees may yet show us how to live with respect and character.

They mean biodiversity of time. They are examples of old life which is beyond extraordinarily rare in the universe.

Again, to the Forest service ,

Old growth forests are far more valuable to our country as lessons of respect for future generations than indiscriminate wasted building materials easily obtained elsewhere!

Thank you,

Peter Quinn
Plymouth, MA

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This is essential; please support us—thank you!

Thank you,

Abigail Heim
Rowley, MA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Development is destroying natural animal habitats and carbon sinks. The window to act before devastating impact is rapidly closing.

Forests provide shelter for animals, plants, insects, and recreation for responsible people.

The disappearance of old-growth forests will rapidly contribute to climate change, making the planet increasingly more inhospitable for life.

Thank you,

Michael Langton
Newburg, MD

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are our last line of defense against climate change we should be increasing their size not allowing them to be destroyed!

Forests are a place of safety and resources that need to be protected.

Climate change would run rampant and humanity will likely go extinct if all forests known as old-growth were clear cut.

Thank you,

John Holland
College Park, MD

The United States Department of Agriculture (USDA), Forest Service

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Given how many acres of trees we are losing to increasingly frequent and severe forest fires, I'm amazed that we're allowing ANY logging of mature and old-growth trees in federal forests. This as a national treasure in the fight to address the climate emergency.

To me, forests represent a beautiful, restorative place and a buffer against the climate emergency.

If old-growth forests were to disappear, I would be forever sad at heart.

Thank you,

Nancy Koran
Bethesda, MD

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Our trees, and especially old growth trees are protecting our planet. We should not be destroying them.

Forests mean clean air for all creatures. They mean habitats for wildlife which helps to restore our balance of nature.

Our air would become unbreatheable, our balance of nature would be destroyed, and drastic climate change would be killing our planet.

Thank you,

Barbara Winner

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are a place for all of us to connect to nature, to learn about the world we live in, or just to take a walk in the shade. We should do all we can to preserve old-growth forests to ensure everyone can continue to visit them in the years and decades

Thank you,

Aidan Trager

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The value of old-growth forests is higher than any monetary price. The earth's ecosystem relies on old-growth forest. Humans need to live with nature instead of monetizing it. Our survival on this planet depends on working with nature, not against it

Forests are sacred places on Earth. They represent nature in harmony..

It would be a blow to our family and our values

Thank you,

R Nelson
Newcastle, ME

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The value of intact old-growth forests is far greater than their value as building materials or farmland. Or any other use.

Thank you,

Amy Durocher
Winthrop, ME

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The wilderness they represent is not only iconically American but a huge, healthy carbon sink, which my grandchildren need and we should leave them.

Thank you,

Pamela Blake

Forests are a refuge for what little is left of our inherited biodiversity, and their continued decimation is dangerously short-sighted.

Old-growth forests are significantly better at preserving biodiversity and sustaining the ecosystem services (cleaning air and water, etc) than immature forests, especially the kind of monocultural forests that were replanted after clear cutting.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

As a professional ecologist, I know the importance of fully functioning "old growth" ecosystems to biodiversity, climate resilience, and drinking water.

Thank you,

Kris Olsson
Ann Arbor, MI

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Considering what they do to sustain us, their natural beauty included, we need to be aware and care for every living things sake.

Beauty, I peacefulness, quiet

It would make the landscape sterile.

Thank you,

David White
Twin Lake, MI

The United States Department of Agriculture (USDA), Forest Service

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

First-the trees die or are removed! Then, all life on earth follows!

Beauty, peace, joy of life, Oxygen!

Sadness, First, then fear as life as we know it begins to disappear! We need the trees!They are of paramount importance to life on this home we call EARTH! They clean the air!

Thank you,

Patricia Greenwald
Farmington, MI

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests provide for biodiversity of plants and animals, yet old growth represents just a tiny fraction of our national forests. The forest management plans for each national forest must include the goal of increasing old growth for future generations.

Old growth is important to me. Our property has been placed under a conservation easement and we have a forest management plan which designates 80 acres to be managed for old growth. While we will never live long enough to see it happen, it gives me comfort.

I appreciate the diversity of birds, plants and animals that depend on old growth. I am concerned about the impact climate change is having and will continue to have on our forests, including old growth.

Thank you,

Nancy Warren
Ewen, MI

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth trees are marvels, seed banks, protectors of genetic diversity, and ancient symbionts. They're home to forest denizens, fonts of diversity, and sources of imagination and awe. Protect them. All of them. Without exception.

I spend a lot of time outdoors being healed by the slow calm of forests. I respect the fact that nonhumans have the right to experience peace and sanctuary in their forest homes.

Thank you,

Jen Demoss
Petoskey, MI

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Once an old growth forest is gone, it can never be duplicated. Planting more trees only creates an artificial forest

Forests are not just to collect timber, they are to explore and allow our hearts and souls to expand and our minds to create new thought

They are a quiet place to explore, experience and quiet one's busy mind. A place to observe nature and become grounded while in the midst of a busy life

I would be horrified that we as humans were so stupid and greedy to do such a thing. I'd be incredibly sad that I couldn't share that beauty with my Grandchildren but instead only bring them into a man-made planted forest that had lost its soul.

Thank you,

Nancy Gilliland
Lathrup Village, MI

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Saving our old-growth trees is vitally important to our world! Please, do all you can to save these treasures!

Thank you,

Jennifer Baron
Stevensville, MI

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There are science based reasons for us to protect forests. There are personal reasons for individuals to work together to protect forests and they include the undeniable truth that walking in a forest is a health inducing effect for stressed out people.

Forests are healthy for me, and they would be for you if you get out of your concrete cities to relax.

If the forests die it is a clear indicator of how misplaced our values were. If they die off our lives will be coarser, shortened, and ugly. I don't want to live to see that!

Thank you,

David Dunn

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Our children and grand children depend on us making the critical decisions to protect the environment for the future. Please consider the importance of saving old-growth and mature forests to protecting the environment for the future.

Forests mean life itself and without them we can think the human race will find the natural environment hostile to continued life on earth.

If old-growth forests disappear, we can expect the natural environment to be hostile to human life for my children and grand children.

Thank you,

Joel Huser

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Once we lose old growth forests, we will never get them back again. My grandchildren and great-grandchildren can never enjoy their beauty and majesty.

Thank you,

Brian Singer-Towns

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Our old growth forests are the most important source of life available on this planet. To destroy them would be destroying US. Our lives are dependent on these trees as natural oxygen tanks, and to attack them in ANY way would be akin to chopping off one

Forests are not just beautiful attractions that help our scenery. They are vital parts of our ecosystems, an ecosystem that WE are a part of.

Up in Northern Minnesota, the trees are taller than most houses, creating shade to a hot summer and bracketing communities with beautiful greenery. They're more than just forests, they're homes, and their destruction would spell an end to these communitie

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Trees are a lifeline for me and for all of us. Let's protect them, so they can protect us.

Protection, connection to the earth, beauty, groundedness.

Thank you,

Sharon Rigby Osborn
Duluth, MN

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We love hiking in the old-growth forests that remain to us.

Old-growth forests not only pull down much more CO₂ than younger ones, but they also provide habitat for important animals and plants.

We need to keep the CO₂ in old-growth forests out of the atmosphere, so global warming and its climate change consequences are curtailed. And we need old-growth habitat to conserve biodiversity.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please protect the old growth forests! We have very few recourses left in Missouri, but the Federally protected Ozark National Forest is one of them. Don't let greed take it away!

Although I live in the northern part of Missouri, if we lose the old-growth forests, we will lose so much in our state. We will lose the benefits such trees provide to the climate (which is warming too fast); we will lose fire-resistance in our ever-expa

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

They help process the excess CO₂ in the air, and they also take my breath away by their grandeur.

There would be a little less awe in the world with their disappearance. I feel I would be less connected to my earth and all its wonders.

Thank you,

Victor Poland
Parkville, MO

Habitat maintenance is so important for wildlife! Let the trees stand! Let the forests be wild places, not barren fields! Old growth forests should not be used for logging purposes. We don't have to make a profit off of nature in the old growth forests.

Forests mean a place to experience nature. Forests mean a place to renew and nurture our spiritual and mental strength. Forests mean a place that is wild.

If all our old-growth forests were gone, there would be no wild places to commune with nature. It can be invigorating mentally to walk in these places, but if they were gone, then animals are deprived of habitat, plants are shocked into environments that

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I spend a lot of time on Forest Service land, not only in my home state of Missouri, but also in western states like Montana and Washington state.

Thank you,

John Hickey
Saint Louis, MO

The United States Department of Agriculture (USDA), Forest Service

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Protecting our trees, ourselves, and our planet is of supreme importance. Please do not let anything happen to our mature and old growth trees!

Thank you,

Nan Hart
Springfield, MO

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Stop allowing corporations to cut down old growth forests. Some of these trees are over 100 years old!!!! Also, with the climate change crisis, we need these trees!

Forests are incredible ecosystems and cannot be replaced. Not only are the trees invaluable but they also provide habit to countless birds, insects and other wildlife.

Old growth forests cannot be replaced. Stop cutting them down immediately.

Thank you,

Stephanie Todd

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Save what little is left of our old growth forests. Way to much as been cut down already.

Old growth forests are part of our history. I want my children and grandchildren to be able to see what once covered much of our lands. Enough has been cut down already.

Thank you,

Scott Hanson
Heron, MT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Save the redwoods wherever they grow. Reroute US 101 around them in CA

Thank you,

Susan Hamblin
Deer Lodge, MT

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The forests are our earthly lungs, please save old growth from the chopping block.

It is amazing to see old growth forests and imagine life when these trees got their start. A walk amongst the trees gives me a feeling of well being and peace.

A world without forests destroys the wildlife within and dulls the human experience. I live in a largely forested region of the west and would be devastated to see these rocky mountains without trees, without wildlife without shade.

Thank you,

Tami Malchow
Thompson Falls, MT

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

These areas provide security habitat for wildlife, feed our coldwater streams, and help with carbon storage. They're too important for people and fish and wildlife to log off. Please conserve them.

Peace, security habitat, fair chase hunting and fishing opportunities.

We would lose a lot of wildlife, and fisheries habitat.

Thank you,

Nick Gevock
Butte, MT

Unquestionably, mature forest are priceless in sequestering carbon, and should be preserved.

Places of solitude, shade for ski trails, habitat for numerous plants and animals, and essential to the integrity of the ecosystems they inhabit.

By contributing to ongoing climate change, they would eliminate snow upon which I depend for nordic skiing, and for household use.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

All the science tells us we MUST KEEP our old growth forests to help curb the climate crisis. IT IS AS SIMPLE AS THAT.

They mean helping to curb the climate crisis AND give meaning to all of us humans as we stand in awe of them.

Thank you,

Ron Bryant
Norwood, NC

I just spent the weekend hiking in Pisgah and Dupont National Forests

I understand the history of national forests as long-term sources of forest products to serve the national economy. We still have substantial tracts of national forest, but dwindling stands of old growth forest. Once gone, they are irreplaceable.

The old-growth forests belong to all of us, and not just to timber interests. I want my grandsons to enjoy access to these forests and not have to read about them in history books.

It is so important to protect our valuable ecosystems for our own wellbeing!

Air. Literally and figuratively. With increasing urbanization it is important we have places to breathe. And places that offset carbon. Places that conserve native habitat as well.

That would be intrinsically extremely depressing. Also likely more of the horrors of climate change-- fire, extreme weather events, heat waves, disease, even wars are side effects in many cases with people competing for scarcer resources.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

It takes a human lifetime for even one tree in a forest to become 'mature'. That fact, in and of itself, speaks to the power and worth of each specimen that makes a forest.

The vast majority of these stands of trees took centuries to grow to their current size. In the face of climate change, we need our forests more than ever. Conservation should be both the short-term and long-term goal.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

It's a no-brainer to preserve old-growth forests.

Thank you,

Jim Atkins
Winston Salem, NC

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old forests are a national treasure.

Forests are homes to a multitude of animal life which helps sustain our eco-system, our environment.

Removal of old-growth forests would destroy the desirability of our communities, the air quality our lives. The danger of extensive erosion and damage to our water systems can destroy the quality of our water and threaten the stability of our homes.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The USFS has, for too many generations, given away OUR National Forest lands to forest killers, rich "ranchers", mining companies, et al, and allowed wholesale destruction. The time is now to rectify this shameful history, and to to start rehabilitating O

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

All trees are not created equal.

It is proven that not all trees are as effective for storing carbon emissions as old growth trees as old growth forests, mangroves and their surrounding ecosystems.

So there is no good reason to be destroying any part o

Same as water...life!

Rise in temperatures. loss of habitat that we depend on to sustain life. We do not own the earth! So we must put equal good back into it.

Thank you,

Paul Serrano
Lincoln, NE

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please protect mature and old-growth forests!!!

They store a lot of carbon, helping our planet survive in more ways than one...

They naturally filter our water. They provide home, shelter, food, and habitat for many species... some of whom are endangered

Forests mean habitat home, clean water, clean air to breathe, biodiversity of species, natural beauty and sheltering protection.

If our old-growth forests disappear, it would be a great loss. We would not have the "one-ness" with our natural world, and our natural world would fail to be able to continue to provide the good clean water, cleaner air, biodiversity of species and hab

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please protect old-growth forests. They are essential to help prevent climate change with CO2 capture and their biodiversity is immensely important to protect. They can prevent erosion and they filter and control the flow of water.

Old growth forests are a beautiful site. To be in their presence instills a sense of awe and peace.

Climate change would be accelerated. Personally, I would feel a great sense of loss and sadness for the animals and plants. All existence is connected. If we destroy all of the old-growth forests, we destroy our future and ourselves.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

please protect our old growth

clean air, a future

we would no longer be safe

Thank you,

Nancy Burger
Salem, NH

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please save our old-growth forests

Thank you,

Catherine Greenleaf
Lyme, NH

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Precious old-growth ecosystems, now maturing, must be allowed to continue aging, providing habitat for all of Earth's life forms. We must stop the extinction, which ultimately includes us. It's now or never.

Thank you,

Charles Houston
Nashua, NH

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Preservation is key to protecting the future of our planet.

Thank you,

Sarah Joslin
Alstead, NH

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

As a forester, I recognize the importance of old growth forests as part of our global ecosystem. I applaud the Forest Service for incorporating them more significantly into policy decision-making,

Forests provide habitat and improve bio-diversity in ecosystems. They provide protection for living and non-living resources. They provide space for recreation, meditation and health and spiritual restoration.

Old growth forest ecosystems are part of the global system that keeps things in balance. Without them, natural systems like weather and species migrations can be thrown out of balance. The Earth would be a less lovely place without old growth forests.

Thank you,

Nancy Pi-Sunyer
Montclair, NJ

Please stop the unnecessary logging by the undesirables! The Agriculture Dept are erroneous in their way of thinking...bunch of stupid Liberals.

I rather see protected forests than see unnecessary housing developments for all the unnecessary unemployed immigrants that Biden is allowing to storm our country. Ellis Island is defunct and so should the current immigration system be.

If we let the Liberals and Democrats win...our country will become a cesspool of idiocracy, retarded foreigners, and warehousing and housing developments on every scrap of land!

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in feder

Your help is urgently needed to protect mature and old growth trees.

These trees absorb more carbon than younger trees. Also forests provide a home for wildlife and a source of reliable water for man. Please consider the following:

Thank you,

Mary Ellen Richards
Caldwell, NJ

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth is rare in the Sangre De Christos. When I encounter an old Aspen or Ponderosa, I bow in respect and gratitude. They carry history and wisdom. With so much dying in our forests, the old growth helps anchor and produce new growth.

Thank you,

Sarah Stout
Santa Fe, NM

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Everything. I spent my childhood camping in forests near my home. It saddens me to think they won't be protected for future generations of Americans.

Thank you,

Alan Matthiensen
Albuquerque, NM

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

A lot - I live near two National Forests and I see the nonsense that happens in there. They need protection.

It would be barren and ugly. I would probably move away.

Thank you,

Liz Johnson
Tijeras, NM

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please protect our forests. These areas are important heritage areas and unique habits. Once they are changed, they will never recover their important relationships with the broader ecosystems.

Forest environments are already rapidly declining. We need to do more to preserve these areas.

It also impacts the health of our biosphere.

Thank you,

Jeanne Brako
Santa Fe, NM

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

100% Truth- Do it for the greater good for ALL

They are the essence of our world. We stuck our noses into a sophisticated system that needed no help from us and look what happened. Don't be responsible for killing her.

Listen

Seriously? It has nothing to do with me my family or my community it has to do with allowing Mother Earth to do what she knows best without our interference.

Thank you,

Laurenzi Annunziata

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I enjoy hiking and backpacking in forest wilderness areas, especially in the western US.

Forests with mature and old-growth trees are marvelous to behold. They provide a reservoir for new forest growth and help take up carbon dioxide to mitigate climate change.

If our old-growth forests were to grow smaller or disappear, there would be a grave impact on recreational opportunities for me, my family, and my community, in addition to undesirable environmental impacts such as increased global warming and loss of spe

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

In a world that is covered in concrete, buildings and all sorts of other things we construct it is good to save nature. Everyone knows Trees produce oxygen and we can't live without that. Also, the forest is the best place that I have found to reconnect

A home for so much wildlife, a peaceful place to find solitude. The lungs of our planet, and a good place to find some shade to escape the heat which seems to be getting hotter every year.

I would be bummed; those trees have been there for longer than we have been a country. They have stood the test of time and teach us about being resilient. Also, in a world where nature is quickly being destroyed and animals are going extinct at record nu

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

In Nevada, pinyons and junipers are some of our oldest growth forests. Protection of these forests means protection for the struggling greater sage-grouse whose numbers have steadily declined in recent years.

Protection of forests means responsible stewardship, working with Indigenous people in maintaining the old growth forests and their ecosystems.

The carbon sequestration potential of old growth forests is often overlooked. Our efforts on stewardship, management and protection must be reevaluated as we build policies to address the worst impacts of climate change.

Thank you,

Linda Stout

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Places safe for wildlife as well as people, plants that produce oxygen, and conserve water

Heat, drought, dreadfully boring bare places

Thank you,

Emily Oaks
Sterling, NY

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are habitat for so many birds and other animals. They are beautiful and can't be regrown in short period of time. It takes years to replace trees. Without them, the earth suffers.

I believe if our old-growth forests disappeared, the planet would not survive. Trees provide Beauty, shade on hot days, oxygen, homes for birds and other species.

Thank you,

Kathy Kristich
Buffalo, NY

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

As a landscape ecologist and conservation planner, I know first hand how the tiny amounts of old growth and mature 2nd growth forests remaining provide unparalleled structure, habitat, diversity and carbon storage for our fragile, warming planet.

I've devoted my life to: researching, conserving and educating the public as to the roles that healthy, intact forests play and the unparalleled ecosystem services they provide our world

I happen to know and have spent a lot of time within some of the few remaining old growth stands within the Eastern US, and it would be no less than a crime against nature for the agency responsible for protecting and preserving our precious public resource

Thank you,

John Mickelson
Albany, NY

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

At this time of ecological devastation, we must protect old growth forests from degradation. Old growth forests absorb incredible amounts of carbon, and are vital habitats for thriving ecosystems across the country.

Forests are places for quiet community with nature, for supporting countless species of wildlife, for gorgeous walks and hikes, and so much more. There are few things more restorative than the calming sounds of winds and birds in the trees.

I lived in Oregon for a decade and saw first hand how clear cutting decimated habitat and natural beauty. We have damaged the planet, our only home, far too much already to even conceive of mass destruction of our old-growth forests.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Many medicinal fungi live only in old growth forests and we can't afford to lose them, for example the agarikon in the Pacific Northwest, which can treat TB, bird flu, smallpox and many other serious diseases.

Forests are lovely places to wander as well as important for preserving the environment and supporting a complex ecosystem on which humans are dependent.

We need the help of old-growth forests to sequester carbon and support the fungi that are our best hope for saving the planet. One of my great pleasures is to visit the Thain Family Forest at the New York Botanical Garden, where important research also ta

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Mature forests, when well tended, can protect wildlife, provide medicine, and absorb carbon. Please protect them.

They are a source of beauty and survival.

If we lost our older forests, we'd experience a hotter world. Mature trees take a while to develop; we should preserve and nurture them.

Thank you,

Rochelle Spencer
New York, NY

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Mature forests cannot be replaced except over a very long time. They are home to innumerable species of flora and fauna as well as a grounding presence in the topography of the earth.

They are a source of inspiration and grounding, healing energy, as well as deep beauty.

I would be bereft about all the lives that have been lost - lives of so many species, as well as an integral component of our human consciousness - whether we recognize old-growth forests as such, or not.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Our country used to be covered with old growth forests until traders and settlers came. The remaining old growth forests must be protected for future generations.

Thank you,

Astrid Jarzembows
Garrison, NY

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

OUR NATIONAL FORESTS are a national treasure and should not be treated as logging cash places. Protect them with the full force of your democratic power for all of us.

A place of biological diversity and peace for all creatures, not just humans. Trees are being cut around the world to make space for the next billions of humans covering its remaining peaceful and healthy environments. Forests should be preserved at perpet

The wildness of the climate change is already making life in many countries unbearable for the billions already there. More upheavals and temperature record breaking will push throngues to move to more habitable places. We are one of those places...

Thank you,

Camille Doucet
Ithaca, NY

The United States Department of Agriculture (USDA), Forest Service

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The value of our land only measures up to what we do to maintain it. There's so much beautiful forest here that protects our water, stands against erosion, and serves as a carbon sink - all things that are only going to get more critical as the world warms.

My happiest memories have been made in natural parks, wilderness, and among old growth trees. There's a quiet among old trees that is precious to me, coming from the city.

My work is in green infrastructure, and in my personal life, I try to build a lifestyle around getting as much time outdoors as possible. A world where all old growth is gone would be a grimmer one. Our science would be impacted, and I just wouldn't be able to live there.

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This is absolutely unacceptable, we need to save wilderness, and all it contains, including old growth forests, and a support of limited use around, to help insulate!!

Beauty, life, freedom, and peacefulness

We would all be upset, we love to explore places like this and soak in the awesomeness, and quiet

Thank you,

Mary Weber
Scottsville, NY

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This is an absolute high priority. Our atmosphere depends on these!

Everything!

Our planet might die

Thank you,

Elizabeth Root
Trumansburg, NY

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We must respect our elders. Something that takes hundreds of years to grow should not be destroyed for quarterly profit.

Thank you,

Jim Derzon
Saranac Lake, NY

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We must take special steps to ensure the core of our natural heritage , the old growth forests, are identifies and lawfully protected in perpetuity.

Forests are our manifest connection to natural life

I cherish any contact I ever have had with those sacred places our old growth forest stands.

Thank you,

Arthur Klein
Tonawanda, NY

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We need all the mature trees in the country to fight climate change and provide wildlife habitat so they need your protection. We can't afford to use them for timber.

Forests are an intricate part of our ecosystems and provide environmental services like clean air and pure water.

We are already being impacted by climate change and if our old growth forests were lost, it would be much worse.

Thank you,

Carol Hinkelman
Rochester, NY

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I am the Lorax, I speak for the trees!

First, I would sob for a long time. But on a more general level, the entire country would lose sacred, priceless land. Imagine children growing up, not being able to dream of visiting the beautiful redwoods and spruces.

Thank you,

Annabelle Cushman
Lewis Center, OH

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

They mean life. We need them to store carbon and newly planted trees are often too weak to survive the increasingly severe storms we are now experiencing.

We need these old-growth forests also for our mental health as the benefits to human life have long been studied. These forests protect us and they shelter wild life and insects that are critical to our existence.

Thank you,

Karen Eliot
Columbus, OH

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests mean peace, and fresh, clean air. A safe habitat for diverse wildlife.

It would be devastating, emotionally and physically. The loss of clean air, and a place to go for serenity, would take a monumental toll on my family and I.

Thank you,

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests represent, to me, places untouched by humans and a reminder of where we came from and where we will eventually return.

Old growth forests vanishing would wreck the environment and bring about chaos for everyone due to climate change. Many families, including my own, would not be able to escape the aftermath of a natural disaster caused by our changing climate.

Thank you,

Noel Cosmos
Toledo, OH

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

They are probably the most important of Earth's ecosystems, with a strong effect on climate change and the water cycle, creating and preserving rich topsoil, generating pollinating insects that help our food crops.

I would miss their beauty and knowing they were sequestering CO₂, holding onto rainwater to help prevent flooding and draughts. Also their rich diversity of plants and animals.

Thank you,

William Cahalan
Cincinnati, OH

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

To me, forests represent the growth and life of both plants and animals. They represent the symbiotic biosynthesis that is Life, the uptake of carbon dioxide and the generation of oxygen that is necessary for nearly all species on Earth to survive.

Outside of the facts that our air would degrade considerably, biodiversity would substantially disappear, and the climate would change more rapidly, the world would lose the beauty and magic that are old-growth forests.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

As someone who has walked in awe in old-growth forests, I want all Americans to have that same opportunity. We need to preserve these gems in our nation.

Thank you,

Paul Feldman

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are the most efficient way to clean our air of carbon and replenish the oxygen. That is vital for climate change and for our health.

They are a place of peace and refreshment, good for our mental and physical health and well-being.

We'd be a lot hotter, my husband's asthma would be worse, our quality of life would be worse.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests do much more than provide timber. They absorb and filter water, serve as windbreaks and flood control, serve as important sources of food and medicinal plants, help to stabilize the soil and the weather, and crucially in this age of global warming

A sense of security, and opportunities for learning, challenge, and adventure. Places to be at home in nature, and places to know that I and my fellow humans did not make this world ourselves. Even if we fertilized the ground and planted the trees.

The world would be hotter, and we would lose important information, resources, and ecosystem services, such as clean drinking water; and we would be much, much poorer.

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old age forests and their communities are getting rare in the USA. We need to protect these treasures.

A community of organisms and minerals that work together.

It would be harder to breathe, both physically and spiritually.

Thank you,

Kathleen Bradley
Oberlin, OH

Old growth forests are the back bone of the American Forests. Once these forests are destroyed, it will take at least a century to replace them. With all the pollutants entering the air we breathe, we need all the trees possible to help clean the air,

Forests are places of respite, calm and beauty. They are habitat to millions of animals, home to thousands varieties of flowers, filters of water supplies, keepers and creators of fertile soil, makers of shade and so much more. We must keep greedy corp

If all the old growth forests disappeared it would be an apocalyptic moment. The world would be practically destroyed. We would lose innumerable animals and plants, clean water, shade, and immeasurable beauty.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Trees are critical to wellbeing of people and planet. There is a tour of life-size wicker elephants starting in the USA to teach us about normal coexistence with other, non-human aspects of our country. The USA indigenous people know how. Listen to them.

No trees, no treeline to climb above. The planet needs trees to breath, and all life to live.

Horror at the thought. Trees die, everyone else dies, too. Older forests, once gone, are irretrievably gone. Lives depend on the older, and oldest forests.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We are all affected in economics and health by climate change. Old-growth forests are one of the chief defenders against climate change and homes to many species. Save old-growth forests please. Save earth, save biodiversity.

Old-growth forests represent life for flora, fauna, and humans. They are teeming with life. If waterways wind through them, they help save aquatic species that are intolerant of heat. They help mitigate fossil-fuel-induced harm to everything alive. That t

The earth is on fire or flooding from burning fossil fuels. The absence of old-growth forests will kill more of us sooner. The government is supposed to protect the people. Preserve the old-growth forests to save and protect us and our descendants.

Thank you,

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There are only a few last remaining large stands of forests. Let the privately owned forests log their's and leave the tax payers forests alone. The forests protect our last remaining wildlife - species are becoming extinct every day due to habitat loss

Tourism is a big economic draw for more people than the logging industry. People from all over the world want to visit and see our beautiful forests and the wildlife it protects.

Thank you,

Ellen Pfander

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I live on the Coast. Old forests are special. They store the most water. Clearcuts and planted timber crops have ruined our area, stolen our clean, reliable water and our fish, bird and wildlife populations. The weather here has changed drastically since

Our remaining old forests are much too precious to be logged. We need them, and we need to let more mature forest stand and grow. Our survival depends on the services that old forests provide.

There is already very little left. We suffer and grieve. We miss having native plants, clean, cool streams, birds, fish and wildlife around.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

My mother was a member of the Sierra Club, (in the mid 1930's) as am I. I am sure this issue would be of importance to her as it is to me.

Thank you,

Michael Peterson
Eugene, OR

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth and mature forests offer a benefit to curb climate change that requires one thing of you - protect mature and old growth forests and deny the profiteering of our diminishing natural resource to offset carbon.

Forests are a natural resource and treasure teeming with biodiverse life critical in absorbing our growing carbon emissions problem.

Diminishing old growth forests are increasing the impact of climate change. Hotter temperatures, disturbed water sheds, more intense wildfires and increased impact on health such as wildfire smoke related dementia and lung disease.

Thank you,

Sierra Farris
Ashland, OR

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please, I urge you to take it's important and meaningful action now, before it's too late.

Thank you,

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please consider the species that live there and also the legacy of our own future generations. Once destroyed these trees are gone forever.

They mean natural beauty, a home to many species that could go extinct, healthy air.

I would be deeply saddened and fearful about the selfishness of immediate profit-motive which would lead us to a hot, unhealthy "Mad-Max" world.

Thank you,

Hillary Tiefer
Portland, OR

There is nothing like the experience of an old growth forest. People who have not simply don't understand the sacred character or value. Please set up the strongest protections while it is still possible to preserve and inspire future generations.

They are sacred spaces. Some forests yield and are managed to provide wood products that we need. But what remains of old growth forests is irreplaceable.

We would be devastated by the short-sighted nature of people whom we trust to set policy.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

These old growth forests are absolutely crucial in storing carbon and preventing the worsening of global warming.

Forests are the lungs of the earth. May we be it's brain and keep them in place, so the air we breathe can actually be clean.

Imagine the other 95% of the Redwoods existed? Imagine wildfires endanger or eradicate our Giant Sequoias? How we treat these forests says a lot about us as a species and will determine if we actually deserve to be here for much longer.

Trees are critical for protecting our climate and overall environment. Old growth trees must be preserved.

Forests are a refuge for all beings. They offer a place of restfulness and more- wild mushrooms, wild huckleberries, elk, and special areas to hike away from the bustle of the city.

The beauty of the area would disappear. Air quality would decrease and history of the trees would be lost. Trees are like a family. They support each other and mother earth.
