Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

That we are not trying to wipeout all life on the planet.

A big impact to wildlife. We all like oxygen that these forest provide.

Thank you,

Kurt Martin

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are the lifeblood of the planet, physically, mentally and spiritually. They clean our air, prevent erosion, provide food & habitats for wildlife, shade our world, create tranquil settings for meditation.

It would be devastating for humans, animals, and the environment. Climate change would escalate to the point of no return.

Thank you,

Susan Llewellyn

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old Growth Forests cannot be replaced. Not in several lifetimes.

The carbon they capture is only one of the many benefits to our earth. Please protect old growth all forestry!

Thank you,

Shirley Pharis
Little Rock, AR

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

forests are ecosystems for wildlife and birds and they capture carbon from warming the climate. We need our forests!

It helps my PTSD, it calms me and connects me to something greater

It would absolutely sicken me, we would be witnesses to destruction!

Thank you,

Audrey Lopez
Phoenix, AZ

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I think honoring and protecting the trees themselves and also all who live in the forest is worthwhile. We need to find balance. At present, most decisions are made based on corporate profits and little else. We can do better.

They are places of life, beauty and wonder. They heal all who spend time there, not just mentally, but physically as well. They provide shelter and habitat for an amazing array of life. And the forests, the trees themselves, are invaluable lives as well.

If we can't find respect for other forms of life and understand that balance and coexisting with others is a necessity, we will all perish. Corporate profits can't be the deciding factor driving every decision in America.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests are integral to the overall health of the ecosystem. Without them, we lose a vast majority of the ecological web of plants, animals, microorganisms, fungi etc. We must put an end to materialism at any cost and recognize that, by destroy

Life and health.

It is likely that the ecological balance would be irrevocably damaged, and we would feel the loss of these forests keenly throughout the food web.

Thank you,

Morgan Ellsworth

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth is critical in providing biodiversity. Once these trees are gone they are gone forever. Old growth trees over profit forever!

They mean peace, quiet, an escape from the pressures and conflict of society. They mean homes for wildlife, filters for our air, and a critical portion of our home.

We would lose an irreplaceable part of our world. You can plant a new tree, but you can never replace the cohesiveness of what you have destroyed, and all for a short term profit.

Thank you,

Roger Athey
Scottsdale, AZ

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Protect our environment!!

Forests mean the future of humanity.

If all our old growth forests died, so to would we. Very quickly soon after.

Thank you,

Isaac Kim

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are the lungs of the planet and visual therapy for weary souls.

Old growth forests help us breathe and give us beauty and escape from all of the ugliness of man and civilization. Our lungs and hearts need them.

Thank you,

Elizabeth Darovic
Monterey, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Temperature relief, habitat, mental reprieve, carbon sequestration

My community would be destroyed. We are defined by the redwoods around us.

Thank you,

Monica Ventrice
Loma Mar, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are part of the lungs of the earth, when we walk in them, sit in them we breathe with the earth experiencing calmness and peace.

Without these old trees we are hastening the impacts of CO2 on the earth.

Thank you,

Charlene Hinckley
Fremont, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forest are major sequesters of carbon to fight climate change and important habitat for wildlife. Old growth forests, compared to covering the northwest, are now rare and unique because of clear cutting in the past. We must save what remains..

Thank you,

Jan Randall
Sebastopol, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Mature trees mean that a good amount of Carbon is being sequestered in those trees and taken out of the atmosphere. We need every precious mature and old growth tree on the planet. They will be a factor among many that keep species surviving.

We'll all die off. The heat waves, hurricanes, tornadoes and floods are already decimating our population. We need all the help we can get and mature trees give us some measure of help.

Thank you,

Eileen Mitro
Ukiah, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The forest is a place of sanctuary and peace, where the giant trees evoke a feeling of awe at the grandeur of the natural world.

The redwood trees around my community dominate the skyline and are unique among forests in America. They are part of who we are here, and our forests have already lost far too many of their old-growth giants. Losing the rest would mean the disappearance o

Thank you,

Hilary Eisma
Eureka, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests, and in particular old growth forests remind me that we are young, I am humbled by their majesty and age. They give me a deep sense of peace.

As humans we would lose a sense of place and time. It is important to linger and contemplate more than the moment. In old growth forests we see the incredible work of nature to heal us and our planet.

Thank you,

Jenny Wilder
Apple Valley, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

They are a place of peace and recreation, a walk in the woods is calming and helps me to keep personally balance, emotionally and physically.

Thank you,

Margaret Cofresi
Seaside, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are beautiful and awe inspiring - I feel closer to God when I am walking through the Redwoods in the Muir Woods. Those magnificent trees are 500-1,000 years old and well over 250 feet tall. What could be more inspiring...

This would be a travesty. What right has anyone got to destroy a life (and the tree is a living, breathing life) that is so beautiful and has lived so long. Forests have inspired poets, writers and artists, more so than most people. The impact would be

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Forests are important.

Thank you,

Marlene Carroll
Santa Barbara, CA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Healthy forests are critical for the survival of all life on our only planet.

Healthy forests provide clean air for all life. A walk through a healthy forest can be a spiritual and healing experience for anyone, even and especially for those suffering grief or depression.

Life on our planet would deteriorate without our forests. Fewer trees lead to fewer plants, global warming and pollution, and a decline in the quality of the air that all life needs to thrive and survive.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Humans can not replace old growth forests. Humans need to have these ancients in our midst so we can learn from them and experience awe that takes us beyond mundane human experience.

Forests are life for people and other animals. We need them more than anything that humans might build.

We would lose something irreplaceable and be poorer for it. Subsequent generations would not have the chance to feel awe of a living thing older, larger and more peaceful and giving that any human can be.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

If not now, then when? Natural resources are not infinite, and we need to begin tending to them responsibly, in a way that prioritizes long-term living rather than short-term profits.

Forests are a life-giving force in nature that we must protect to reverse some of the damage caused by climate change.

By not addressing this now, we risk reaching a tipping point from which we cannot recover, forever debilitating human life on this planet.

It has taken hundreds to thousands of years for these beings to grow, as carbon collectors, ecosystem protectors and strongholds, soil protectors from flooding holding ground water and nutrients. They are a last holding diverse habitat for many species .

They keep our planet temperate, a healing balm for the earth and for the souls for all that go walking amongst them. They are a huge key to keeping our planet in balance.

The path of destruction of our planet and its fragile balance will be irrevocable. The loss of ecosystems, species of birds and salmon, heating of our planet, flooding, fighting over clean water will all continue. My heart aches that my grandchildren mig

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I think it is vital work for the Forest Service to preserve old growth forests and to develop the next generation of old growth forests. These forests are one of our main ways of combatting climate change and preserving our world.

Forests are calm places where I can feel strength and caring.

We would lose contact with the wildlife there and all we can learn from them. We would lose the beauty of the trees.

Thank you,

Martha Moga
Foster City, CA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

It is absolutely imperative that we save old growth trees for the health of the earth's environment. We must save the trees. They play a unique and vital role in the continual exchange of Co2 to oxygen so that all life can survive.

The forests are absolutely necessary for a healthy atmosphere. They synthesize oxygen out of Co2.

The earth would no longer be the earth. This would be a loss that there would be no way to come back from. What these trees give to the land would be lost forever and that to me would mean death.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Let's stop logging old growth and protect our remaining forests

They mean beauty and a balanced ecosystem, a place for many species to thrive

It would speed up climate change, it would make my local area hotter without the trees for shade and to draw fog and help create rain, it would reduce biodiversity and give remaining species including threatened and endangered no place to live .

Thank you,

Anastasia Fiandaca
San Rafael, CA

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth and mature forests are a miracle and a source of awe and enjoyment that sustain our spirits and the health of our planet.

The way we preserve and care for our forests will determine the future of life on earth.

If we lose or destroy the old growth forests that remain today, after so many years of logging and exploitation, we risk losing a source of joy and inspiration, as well as the livability of our home on earth.

Thank you,

Kirstin Summers
San Pedro, CA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old-growth forests:

- Absorb and store carbon better than any other ecosystem 🌲
- Provide irreplaceable habitat, safeguarding biodiversity 🦊
- Reduce flood and erosion risk 🌊
- Boost wildfire resistance 🔥
- Supply clean drinking water to million

Old-growth forests are our most precious and vital forests. There is no quick or easy fix to replace nor supplement the benefits provided by old-growth forests.

It is critical that we become proper stewards of the land such that we do not further exacerbate the issues of climate change. Air quality, wildlife, and wildfires are all highly influenced by these ecosystems being properly protected and maintained. If

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests are priceless treasures. Please do all you can to care for them.

Trees are life, restorative to body and mind. I saw the forests of Alaska 15 years ago. I commented, "This is what heaven must look like."

I can't imagine our planet without trees. The National Old-Growth Amendment is a way to provide the needed support for the U.S. Forest Service to do what is correct and beneficial for our forests. Trees provide so many benefits to life on earth. We can'

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Once they're gone, they're gone. Please don't let this happen.

Serenity, peacefulness, silence, the awesomeness of their age and trying to grasp how they've survived and thrived.

We live in the foothills of the Central Sierra foothills. Our forests have been severely damaged by not only fires but beetle infestations. To see the swaths of dead and dying trees is disheartening to say the least. Our grandchildren haven't seen the "re

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Once we lose old growth forest we can not replace them or replant them or regrow them or the ecosystem they support.

They provide a window in to our per-indutlirized past. They provide support for plants and animals.

It would have disastrous consequences for people, plants and animals and the unknown consequences on the environment.

Thank you,

Fionna Davis

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Parks and wildlife are what make the United States such an enviable vast and majestic land, such a shame to lose them over toilet paper --- let companies grow bamboo and use other sustainable materials, stop the killing of trees for wood and paper.

Thank you,

Inga Stanelun
Studio City, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please act decisively to protect these beautiful giants who play a key role in fighting climate change, provide wildlife habitat and create a beautiful world and an appreciation of nature and science, and a new generation of people who will continue to pr

Everything! They are amazing self supporting regenerative eco systems that are a marvel and a living embodiment of our beautiful planet.

Sadness, despair, grief, loss of one of the most precious natural resources on

Our precious planet. And an inexplicable purpose that reflects the worst human qualities: greed, ignorance, exclusion, disregard for others..

Thank you,

Cynthia Hoffmann

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please act with urgency!

Forests are beautiful places to appreciate and to recreate in. Because I live in the urban sprawl of LA, forests are one of the few ways left for me to connect with the natural world; and in that natural world, old growth forests are critical to life as

That would be an insurmountable loss to the greater LA area. So many families would lose their means to learn about and enjoy the great outdoors. The air quality would suffer even more! This would impact our health and life as we know it!

Thank you,

Jeffrey Wang

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please prevent logging in diverse age range of Forests

Thank you,

Please stop the cutting of old growth trees and forests. Try to lay the groundwork for not cutting mature trees. Thank you.

Forests are a neat place to go to. They have squirrels and birds and other types of animals who reside in or very near to the trees and there's so much to begin from them and yes they do absorb carbon and give off at least some oxygen.

Already too much of older growth forests have been cut away and there needs to be a strong effort to preserve what is left. Thank you so much.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please save these treasures for the people & the planet.

Thank you,

Valerie A Kobal
Vineburg, CA

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Recycle more, log less.

Protecting the Earth.

Old is a relative concept. We should protect all of nature that we can. It makes our home livable.

Thank you,

Kenneth Gibson
Oakland, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Removing massive amounts of trees for profit is a crime against the next generation. Do you care about your children and their children?

Survival of a healthy planet. Beauty.

The impact on future generations is not a pleasant one.

Thank you,

Robert Sullivan
Poway, CA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Replanting in place of old growth is not enough. Better yet old growth promotes biodiversity that new replanting cannot.

Forests are a sanctuary for residents, plants animals and invertebrate species. Do not clear cut these areas that are so valuable to the biodiversity and human benefits.

Old growth forest promote diverse soil enrichment for various plant species. Replanting new trees in its place is not enough.

Thank you,

Stacy Mesa
San Jose, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Re-planting won't help; old-growth trees remove far more carbon from the atmosphere than new trees do.

To sum up: source of oxygen on land.

Well, for one thing, the climate would get increasingly worse due to not only the loss of the major carbon sinks on land, but also because of the massive release of that stored carbon once the trees are dead.

Thank you,

Nancy Hubbs-Chang
Pasadena, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Stop old-growth trees from going to the mill. There is broad agreement that what we have left is too precious to cut.

Lay groundwork for durable protections for mature forests, to ensure that they are able to develop into our next generation of old-grow

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There are not many of old-growth forests left, and they should be saved for our children and grandchildren.

Thank you,

Ted Gorn
Pacific Grove, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There are precious few forests left on this planet. Yet they are the lungs that keep us alive - oxygenated and also reminded of the beauty that still can exist in this world.

Thank you,

Charla Morgan
Cambria, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There is no reason to be logging old growth forest. We have the knowledge to ensure we use renewable resources not, resources that take hundreds to thousands of years to generate. Let's not make the same mistakes and preserve our most vital resources.

Pure beauty, health, happiness

It would destroy our ability to connect with nature, increase climate warming, lower our resilience to extreme weather events like fires and flood.

Thank you,

Kirk Peterson
Carpinteria, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There are so few ancient forests left. We MUST protect every last one remaining as well as protect old second growth so that it may again be ancient forest for our great great grandchildren.

Thank you,

Greg Schuett
Julian, CA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There is nothing like our forests that provide shelter and defense against our heated and overbearing climate.

Forests were a mainstay to our family when I was young. They provided work opportunities, wonder and formed knowledge about nature. I feel blest to have lived in a rural logging community.

We need to recognize how we as a society have been blest by old-growth forests. Today we breathe freer because of their presence among us.

Thank you,

Jeanne Rollins
Sacramento, CA

Thick forests at one time spanned across North America from coast to coast and to Northern Europe, Arctic and Asia. Today there are few Old Growth Forests remaining. Please protect these massive trees. Our planet and climate and wildlife and mankind depend on

Trees all around us, especially old growth trees, are so integral to our existence. Trees are massive and small, strong and yet dance in the wind, protect our soils, give us shade, and fruits, nuts, blossoms, protection and strength to humans and wildlife

Trees are absolutely needed to keep our atmosphere clean and absorb the intense sun's rays. Without trees on our planet, all life will suffer and die out.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This is very important!

Trees are very important for a number of reasons. The most important is they give us oxygen.

We also enjoy their beauty along with them being home to so many animals. Destroying forests will destroy all the habitats!

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

This matters for reasons bigger than me. My biggest fear is that this whole world will be turned into burning asphalt and concrete, reflecting massive amounts of UV rays, and that all of our old growth forests, fields and natural spaces will be paved over

Forests represent getting in touch with nature and a chance to think clearly, breathe healthy air, see animals and birds. Putting myself aside, it's a place for nature to thrive. Forests create healthy air and healthy water.

I'm seeing a massive amount of construction where I live, and it's heart breaking to watch the plants and animals be destroyed and turned into Panda Expresses and Walmarts. This country should have been formed at its foundation with stronger protections a

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We have already plundered the largest trees on the planet. The ones that are left should remain to protect biodiversity, sequester carbon and provide irreplaceable aesthetic and spiritual value.

Thank you,

Holly Sletteland
Templeton, CA

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We have alternative sources and can leave our old beautiful forests to our children.

Thank you,

Donna Pedroza
Alameda, CA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We need durable protections for mature forests, not just old-growth. Mature trees are less likely to burn in a fire. They protect our watersheds. It takes hundreds of years for trees to develop into mature and old-growth forests yet these are the first

Forests provide habitat, retain moisture, help to cool the ground and protect from the erosion that threatens our watersheds all while containing the carbon that is warming our planet.

If all of our old-growth forests disappeared our air would not be as clean, the warming of our planet would be accelerated, habitat for threatened species and biological diversity would be gone. Fires would be far more damaging.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We need to protect our old growth for the future generations and for science. We need to be able to study them to understand what took place in the past.

I love to walk through the forest and hear the wind blow through the trees and to sit quietly and watch the animal. Animals need the old growth as well.

If we remove the trees we would lose out wildlife. Cities are encroching on wild animals as it is with trees being cut down . We need to protect what we have for our future selves.

Thank you,

Leslie Bennett
Moorpark, CA

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Everything is being taken away or taken down. Trees are one of our greatest treasures. Please don't destroy our greatest treasure.

Thank you,

Susan Depew
Thornton, CO

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

For lack of time, I must write to you on this admirable vehicle from the Sierra Club. My spouse and I have visited old-growth forests across the continent, whenever we can find them. We earnestly hope the USFS will find a way to save some of what's left.

Old growth forests contain the essence of the planet as we have known it, and climate change is going to hit them (and us) hard. Their ability to help generate diversity across many phyla is immense.

Thank you,

Linda Andes-

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I CARE DEEPLY ABOUT PRESERVING THE OLD GROWTH FORESTS THAT ARE LEFT AND PROTECTING THEM FROM ALL FUTURE DEFORESTATION. THESE ARE VITAL FOR OUR PLANET AND ARE LIVING BEINGS.

Forests are the lungs of the planet – they are vital to the health, well-being, and balance of every living being on Earth. Besides that, they are living sentient beings that have been around far longer than us.

Human beings need to start becoming more educated about the old growth forests and what these trees do to protect the ecological balance of our world. Not only that, but the scientific community is discovering more and more fascinating facts about trees,

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old-growth forests are an important part of our nations natural heritage. They should not be considered just a commodity.

Thank you,

Ronald Harden
Loveland, CO

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests are critically important to me & my family for several reasons:

They provide a habitat for a vast range of species, many of which are dependent on the unique conditions old growth forests.

Older forests are significant carbon sinks

Thank you,

Allison Qualls

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

old growth forests are the second biggest carbon sink on the planet behind the ocean they are crucial to protecting us against climate change. over half the planets original forests have been destroyed by people we are still losing millions of acres

A peaceful place in nature. Ecosystems, both plants and animals. fresh air to breathe. being able to survive climate change disaster!

Nobody would survive, without the carbon being filtered from the air by trees, the planets lungs, and the second biggest carbon sink on the planet, climate disaster would spiral out of control. natural systems like trees and oceans are the only way to

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old-growth forests require hundreds of years to mature. We've depleted the U.S. of 98% of them in the last couple hundred. They are too valuable and precious to be destroyed any further. Please protect them!

These forests are the most beautiful places on earth. I would be devastated, along with countless other Americans, to no longer have them to recreate and find solace in them.

Vacations and free time would have to undergo a complete and inadequate overhaul if these no longer existed.

Thank you,

Jim Allard

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Stop authorizing the cutting of old growth forests. There is too little old growth left to be sacrificed to logging. Old growth sequesters carbon better than young growth, protects the soil and ecosystems, and is important for the next generations of tree

Forests are one of the crowns of our country and our allies. They provide more to humans and the ecosystem as a whole intact than as lumber.

I've visited old growth forests. They engender awe and majesty.

Thank you,

Elizabeth Ann Garner
Colorado Springs, CO

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Wisdom is in our actions

Old growth forests support new growth, preserve species we are only discovering, and provide tangible evidence of time's passage.

Depression and anxiety are increasing, and nature is our mood moderator, providing places where we can debrief and get literally 'grounded.'

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Without these beautiful forests humans and wildlife cannot live. We need to protect these beautiful old forrests!

Shade from the hot sun, homes and food for wildlife. The beauty of their appearance is essential to our daily living.

It would mean no shade from the hot sun as well as no fruit from the many apple, cherry and other fruit trees. Also their beauty helps get us through the day as we admire them.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Being among trees is healing to us and the planet. When I go hiking it helps me to feel calm and peaceful. We need our forest for the betterment of our health and wellness. Please keep these important beings safe. Not only do we benefit but all the creatu

Clean air

When I go through areas where trees used to be and now are not the area feels dead to me. It's very sad.

Thank you,

Krista Polinsky
Cheshire, CT

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Destroying the old growth forest actually contributes to lives lost...presently & in the future. One of my children is a Soil Scientist and left Alaska primarily because of this..as it was too much to bare.

Forests are food, life, places for meditation and prayer. They are sanctuaries to many animals

Climate change is #1. Providing animals and people with food, shelter & clothing. These large corps have lots of power & money...but we will never replace them. We camp, forage for mushrooms, hunt and fish.

Thank you,

Deborah Barner
East Lyme, CT

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I'm so glad we're realizing that just planting new trees doesn't make up for cutting down old ones. Let's protect old growth forests!

Health! Health of ecosystems, the planet, and us as humans.

It's too hot! We've relied on artificial cooling in such a way that we don't know how to keep cool without it. But if we can learn to preserve old forests and encourage them to expand, we can stop baking in our own homes.

Thank you,

Holly Schaff
Torrington, CT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I am especially horrified that the endangered species act is needed to protect forests. It is critical for US Forest Service to stop seeing trees as a cash crop instead as habitat. Rather than micromanaging nature, or clearing forests for profit businesse

There is no other life form on earth enriches habitat within the earth, generates more than a century of fruit and nuts that provides generous (free) seasonal food for a spectrum of wildlife, (and humans), hosts millions of insects, including pollinators

The loss of our old-growth forests signals myopic, forced control that is subjecting our peaceful planet to destructive extraction.

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests must be preserved for future generations.

The opportunity to enjoy nature.

Some species would be lost forever.

Thank you,

Paul Caouette
Glastonbury, CT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests serve multiple critical purposes. They absorb copious amounts of carbon, far more than younger forests. They provide vast habitat for wildlife and they are nature's very efficient "scrubbers" removing waste and harmful substances from

Forests are invaluable for the significant role they play in our natural systems. They are also beautiful and always a sight to behold when hiking and observing nature in its most natural state. They are healthy for the human soul too!

If old-growth forests disappeared there would be a huge shift in the functionality and health of natural systems on our planet. It would mark the beginning of a terminal downward spiral - oblivion.

Thank you,

Robert Fritsch
Newington, CT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests will allow our grandchildren to experience the world as it was. It gives us all perspective.

Sentinels of life.

We would all be poorer if we lose our forests.

Thank you,

Joseph & Anne Kugielsky
Newtown, CT

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests inspire awe and give people, including myself, a sense of peace and harmony. We need these forests for people and the planet. We depend on each other.

Thank you,

Hannah Cooke
Windsor, CT

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We must act to protect the planet including our vital forests.

Thank you,

Sasha Ray
Washington, DC

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We need more trees, new fewer.

Thank you,

Louise Simone
Washington, DC

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We only have one home!

The Forest are God's Creation that reminds us of our true connection to all life!

We are destroying forms of life that keep our planet healthy in old growth forest. We are not gods, we are Stewart's of Earth but greed is destroying the balance that is essential to our survival.

Thank you,

Maria Gillem
Washington, DC

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

As someone restoring my own land from lawn to meadow to early stage forest, I am invested in protecting the extremely valuable and rare old growth forests we still have.

Healthy Forests mean we as a culture understand the value of wild places left for the benefit of species and maintain a connection to the spirit from which we came.

It would be a loss for generations and a sign that we have lost not only the living creatures that depend on these rare forests but we creep closer to our own demise.

Thank you,

Nick Depiano
Wilmington, DE

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Clean air and water .Preservation of aquifers and wildlife

Foul air ,increased pollutants ,Damage to human biology ,extinction of species .Loss of tourist revenue
Damage to the health of small business and livelihoods

Thank you,

Gary Pasqua
Hobe Sound, FL

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

America (and other countries) cannot continue not protecting old growth forests because we see the changes in our nation with climate change, the abundance of wildfires out west that continue yearly at a pace firefighters have a hard time keeping up with.

Everything-I love the wildlife, the smell of walking into a wooded area and taking in the beauty, the sounds and the peacefulness. This is something no other place can provide in quite the same way..

It would be disastrous for any community to continue losing any form of forests or green places which become less and less-it's time to change peoples thinking on nature and why it MUST be protected.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

AS THE LORAX WOULD SAY SPARE THE OLD TREES!

UNTOUCHED MEANS WILDERNESS!

LOSING OLD-GROWTH FORESTS IS LIKE LOSING A FAMILY MEMBER.

Thank you,

Oron Bass
High Springs, FL

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

It takes thousands of years to grow old growth forests. We must balance our impact on nature and start living in harmony with her. Plant the young trees and use those. Leave the old growth for cleaning the air and sustaining the soil. Thank you

Forests are places to sit and revive the spirit. They are homes to millions of animals and plants and fungi. They are the backbone of life on earth.

Without the old growth forests, we are hastening our own demise. There will be less shade, less balance and less diversity.

We will have less peaceful moments and struggle more to survive.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Nature today is one of the remaining refuges for people and wildlife in this hectic and troubling world. We must act to continue to protect the remaining forest resources.

Forests are homes for animals repeatedly driven out by development. They are a refuge, a beautiful and calming view from my window.

We need trees! They offset carbon in the atmosphere, provide shade to help cool people and homes, provide a place for animals to live. It makes me sick to see trees cut down to build stupid things like more car washes or retail establishments.

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests are one of the wonders of the world - shame on you for not protecting them!

Thank you,

Jean-Ellen Trapani
Nokomis, FL

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests contain naturally biodiverse plants of many species that need protection. Old growth forests cannot be replaced.

They maintain and protect many species of plant life. They provide humans a place of natural beauty for recreation and peace.

They are needed to protect our sanity as a safe haven from dense urban areas.

Thank you,

Gary Sharp
Delray Beach, FL

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests are the heartbeat of our existence. Just walking through them have an ethereal feel and aroma that cannot be reproduced. They are part of us and we need their protection from you.

Thank you,

Kathy Lawson
Palm Coast, FL

The United States Department of Agriculture (USDA), Forest Service
Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests should be protected, and mature forests should be allowed to develop into old growth forests

Forests are habitat for animals and plants and other organisms.

The carbon stored in trees in old growth forests would be released (over time) into the atmosphere

Thank you,

Jim Teas
Palmetto Bay, FL

The United States Department of Agriculture (USDA), Forest Service

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please consider the future of this country for generations. We need the forests to survive, humans can't survive without them.

Thank you,

lynn hudnell

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Please take this message and make sure are trees and old-growth trees alive for generations.

Thank you,

Lisa Rodgers
Palatka, FL

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

These forests not only bring us joy, they also help to protect the planet by capturing CO2.

Thank you,

Judith Burt
New Smyrna Beach, FL

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The USFS can serve "the greatest good" by leaving old-growth forests for future generations! The destruction of old-growth forests to serve the money-man's immediate greed is NOT in line with a base management philosophy of the USFS - just read what Pinch

What much of the earth was, what much of the earth should be, and what much of the earth will be again if/when there is a human die-off!

One more link in the chain holding back the extinction of many species, including humans, broken.

Thank you,

Greg Mikell
Pensacola, FL

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

They are not just trees!

Our remaining forests are a visual history of the settling of our country and are majestic reminders of our duties of stewardship . They are an important link in the web of life for all living things.

I recently visited forests in our great northwest and cannot imagine losing these priceless jewels of my country and depriving my grandchildren and future generations of the joy and awe I experienced there.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Trees are the lungs of the earth. Nature needs our support!

Forest's magical heartbeat inspires and leaves me in wonder and awe!

They provide refuge and recharging energy away from the chaotic world. Trees are the "people" of the woods. I adore trees, ferns, birds, creatures, and all the flora and fauna so sacred

The impact? Fires, floods, erosion, fewer air cleaning tools, ugly landscapes, extinction of plants and animals, displacement of life, upending a place to revere nature, and probably less appreciation for trees because there wouldn't be any oldsters left

Thank you,

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We have to do anything we can to protect the only Earth home we have! Please protect our environment!!!

Thank you,

Jenny Gasparik

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Without old growth trees to sequester carbon from the air, the increasing amount of greenhouse gases in the atmosphere will hasten our approach to overheating past the point of repair. Our protection and support of old growth and mature trees is imperative.

They bring a lot of spiritual peace, keep us protected, provide food and water for us, and hold many species of animals that play critical roles in our ecosystems, as well as being subjects of intense study.

Many of the towns I've lived in will be underwater. Many people would drown, be displaced, or be killed in various other ways because of the increasing strength of the average hurricane.

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The forest is the most important source for the future of our planet. The planet needs the oxygen balance provided by the forests to keep a healthy ecosystem.

It would be devastating for the environment because the forest canopy provides, protects, and removes from the atmosphere. We could not afford to lose the forest, older trees. We would eventually see the effects of its destruction.

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Mature trees are so precious, their inherent beauty and ability to help our air quality and provide an environment for countless wildlife is more valuable than their use as lumber. Please don't cut them down!

Majesty, beauty, an antidote to modern indifference to nature.

The entire world is affected by old growth forests! If they disappear not only myself but all people lose their inestimable value.

Thank you,

Thelma Jean Ballew
Rayle, GA

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests cannot be replaced. We must respect and protect nature, and hence ourselves.

Forests are a sanctuary for both wildlife and people. Thoreau said, "In wildness is the preservation of the world," and I agree.

Our quality of life would suffer. The air we breathe and the water we drink would be less clean. Our climate would become even hotter than it is today. We would no longer have the opportunity to photograph our majestic trees and appreciate their beauty in

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth forests provide stable and resilient ecosystems for native species. We must save that which we not already destroyed, while promoting the progress of newer forests into old growth habitats. Let's make this happen together.

Old growth forests represent the stability, resilience, and majesty of our natural world. There's nothing better of people and the Earth than stable ecosystems.

Similar to the disappearance of the glaciers in Glacier National Park, the elimination of old growth forests would impact humankind for a multitude of generations. Furthermore, their unique habitats would be lost forever along with the many species that

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old Growth trees are irreplaceable and add so much to the environment and to humanity: beauty, cleaning of the air, nutrition to the soil, homes for animals.

This is so sad to entertain this possibility. Yet, so many companies don't care about the future of our planet.

Thank you,

Suzanne Rubenbauer
Dubuque, IA

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The forests are critical wildlife habitat. They are also the places I go to unplug and be present.

So many generations would lose the experience and there would be catastrophic damages to wildlife habitat

Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

The need to protect our old-growth forests and mature forests is an imperative. The scientific knowledge we have these days, protecting our old-growth forests and mature forests is obvious.

Since I started going to camp in the forests of California as a teen I've felt the soul regenerating power of them. For over sixty years they've continue to be a place of wonder. Please protect them for future generations.

Entire eco-systems would be impacted.

Thank you,

Doris Lantz
Coeur D Alene, ID

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

There is something very mystical about walking through an old growth forest, especially if it does not have trails through it. We must do what we can to protect these iconic places from being destroyed.

Thank you,

Lon Stewart

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Life, Oxygen, a place that creates calmness, clarity and peace, and beauty.

Also, shade. as the planet is getting hotter we need shade.

Where would all the animals and micro-organisms that live in a forest go?

Thank you,

Nancy Pepe
Arlington Hts, IL

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

A beautiful answer to decarbonization at the base level. But a place of magical beauty more importantly. We were in an old growth forest in the Adirondacks one year. Will never forget it.

It will impact the planet--the air we breathe, the water we drink, the magic in our lives--even if we never visit one. Not every disappearance is physically present to be soulfully impactful. Connection to our ancient planet is so underrated.

Thank you,

Donald Oplt
Edwardsville, IL

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

To me, trees are the plant kingdom of elephants in the animal kingdom. Wise, intelligent and with good memory.

Old trees have deep roots and history. They are foundational. We lose our old-growth forest and we lose the sense of where we come from in place and geographically. They are a part of our ancestral map.

Thank you,

Elsa Turnbull
Mundelein, IL

America's mature growth forests are essential for many reasons, from their positive climate impact to the habitat they provides for countless plant and animal species. For me, a young person, these trees are important due to their role in removing carbon

Forests are sanctuaries. They are fortresses of biodiversity. They are carbon stores. They are beautiful. They are necessary.

As a young person, I am scared to see how the climate crisis will impact my generation. If all our old-growth forests disappeared, we would lose a crucial carbon sink, which would increase the greenhouse gas concentration in the atmosphere. The unnatural

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

I've worked at The Morton Arboretum, a 100+ year old tree museum in Lisle, for almost nine years, but trees have been an important part of my life for as long as I can remember. They provide numerous benefits such as helping to clean the air we breathe, s

I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old growth is prosperity, and the activity, and bonds with the environment is slowly being realized. We need science to be protected. It's important in the Midwest forest ecosystem

Forests work together , and I feel at peace walking there. I visited the Olympic Natl Park, and our Midwestern old growth forests are just as magnificent.

The impact would be in the loss of biodiversity, the science to uncover how we can become healthier, medicines, etc.

Thank you,

Rosemarie Pinkos

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

Old Growth Trees are a key to correcting climate change.

Thank you,

Re: Land Management Plan Direction for Old-Growth Forest Conditions Across the National
Forest System #65356

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We're running out of old-growth forest.

Thank you,

Jean Farley Brown
Chicago, IL

Dear U.S. Forest Service,

For far too long, profit-driven corporations have looked at our oldest forests only for the value of their timber. But the value of old-growth and mature forests is much more significant. I call on the USFS to conserve mature and old-growth trees in federal forests to combat the climate crisis and biodiversity loss.

We absolutely should be saving ALL old growth trees. And we should stop logging if any other trees as well. Stop treating trees as though they are a commodity to be cut and sold. There are very few wild places left for wildlife already. Key the trees stand!

Thank you,

Patti Walker
Karbers Ridge, IL
