Aliah O'Neill	97206	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Rebecca Winsor	94122	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Benjamin Rubin	97405	Old growth forests have huge value outside of timber. They serve as essential habitats for a diversity of plant and animal species and are a treasured recreational resource. The value of these forests to hunters, fishers, and hikers is difficult to quantify. I appreciate that every forest cannot and should not be conserved. We need lumber to build homes. However, I am concerned that if we only protect forests that have already been designated as old growth then the amount of old growth forest that we have will inevitably, if slowly, shrink. It seems to me that the goal should be to slowly expand the amount of old growth forest available for recreation and sensitive species habitat. Thus, I urge the consideration of protections for forests that are not technically old growth but that have the potential to become such in the relatively near future. This aim would at least help to mitigate to damage that can occur to even protected forests and ensure that this national treasure remains a part of the American identity.
Leanne Summers	97759	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Gabby Levett	22902	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Linda Tanner	63625-9110	Mature and old-growth trees and forests absorb and store carbon many times more effectively than do young trees. Logging old-growth or mature trees will accelerate climate chaos. The Draft Environmental Impact Statement helps destroy old-growth trees and forests. The proposal allows old-growth trees to be converted into junk mail and toilet paper. The draft contains nebulous language that will likely be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. Immediately cease the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. Stop any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should be left for the myriad of wildlife uses, such as a den tree, as well as to decay into tomorrow's soil. Cutting down old-growth trees to save them from potential threats is downright stupid. They are worth more standing, because the real value of a tree or forest isn't in dollars. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging. Protection of mature forests can be accomplished in a way that is consistent with addressing the threat of wildfire. Controlled burns are effective. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. I urge you to break with USFS tradition and protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Sylvia Yamada	97330	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Kelly Aldrich Lutes	98273-3674	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Matt Henderson	30523	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. Howard Bruner	97330	Thank you for considering my comments in support of the National Old Growth Amendment. I spent most of my career working and studying forests. I have been in ancient evergreen forests of many types (species and systems) in most of the PNW and Intermountain US. I continue to seek out and engage in forest enjoyment almost every day. I have found that one can develop a fine appreciation for the special light and sound that can be found in the structure and age of old growth. This synergistic characteristic cannot be duplicated in managed forests. It is unique and special. It is also extremely rare now in most of PNW.I am of the opinion that what remains must be protected. During my life I have been witness to hundreds of 3-to-8-tree log truckloads (second and third growth loads are twenty to fifty trees per load) hauling the massive corpses of systems once vibrant but now gone forever. What is still standing of these systems represents more than their value ecologically or monetarily. These singular forests exemplify eons of evolved life in harmony within halls of wonder. To continue to destroy what small amounts remain is threatening to remove a last option of spiritual understanding of the innate strength and exquisite beauty left in a decaying world. Please Stop cutting original canopies and work to provide protections at edges, instead of clear-cuts.Howard Bruner

The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Bette Holland	30534	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Dave Blackley	30030-2848	We must preserve what little is left! Cutting of forests with modern methods is not only destroying critically important trees, it is destroying soils, groundcovers and organisms that we barely understand. It is absolutely necessary that we protect all that is left and create more old-growth now.Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees.The Draft Environmental Impact Statement fails to protect old-growth trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Adina Hilton	30317	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Betty Daunhauer	30548	To Whom it May Concern. Old growth trees connect us with history, they store and enormous amount of carbon, the filter water and they inspire a sense of awe. We need legislation to protect our old growth forest. If an old growth tree falls, it should be left to compose and keep the ecology of the forest intact.Thank you for your consideration.Betty Daunhauer

Garland	30540	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Nicholas Reeder	25526	Being from West Virginia, a Mid-Atlantic state with some old-growth forests remaining, I see it as vital to protect our trees from further habitat loss. The Draft Statement is insufficient because its vagueness will allow many opportunities to excuse commercial timbering by disguising it as environmental protection. Saving the trees by chopping them down is illogical; the allowances for proactive thinning should be narrower. Old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. Debra Carr	97333	Protections for Our Mature and Old-Growth Forests U.S. Forest Service, I'm writing to urge you to strengthen the protections for mature and old-growth forests under the National Old-Growth Amendment (NOGA). Adopting a stronger version of "alternative 3" is essential to ensure that these irreplaceable ecosystems are preserved for future generations. Please address the urgency of the climate and conservation challenges we face. Mature and old-growth forests store an immense amount of carbon—up to 1,000 metric tons per hectare. Logging these forests releases 25-40% of this carbon into the atmosphere, while only a small fraction remains in wood products. When left standing, these forests continue to sequester carbon year after year, playing a crucial role in mitigating climate change. Protecting them is one of the most robust climate actions we can take. These forests also provide essential habitat for endangered species and offer critical ecosystem services like water filtration and flood control. In places like Oregon's Mac-Dunn Forest system, we've already seen the devastating effects of logging on biodiversity and forest health. Destroying these ecosystems for short-term logging gains is simply wrong. We need climate change leadership where it has an immediate impact, such as carbon sequestration. Supporting stronger protections for old-growth forests is not just the right environmental decision—it's also a smart political move. Most Americans, especially younger voters, are deeply concerned about climate change and environmental protection. Politicians who take a stand for these forests position themselves as climate leaders, gaining support from a broad base of voters. Failing to act could lead to backlash from these communities, potentially damaging political capital with the politicians who overlook climate initiatives with immediate effects on the climate, such as this one. Do the right thing for the long term.
Madeline Katz	98335	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Deborah Clark	97377	I urge the USFS to significantly strengthen the final record of decision to ensure meaningful protections for both the remaining old-growth forests and mature forests, which will become the old growth for future generations. The DEIS fails to protect these climate forests. The proposed policies allow forest managers to do the bare minimum to preserve old-growth forests and moreover create loopholes that could lead to the continued or even increased logging of old-growth trees. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing.To successfully achieve protection for both a) old-growth forests and b) mature forests the final record of decision must:- Eliminate exceptions and end all logging of old-growth trees in National Forests.- Prohibit sending old-growth trees to the timber mills. The economic incentive for logging old-growth must be removed. If the logged tree cannot be sold or exchanged, it will likely prevent all but truly rare removals of old-growth trees.-Set the stage for durable protections for mature trees and stands. This is paramount to the future of old-growth. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. - Be consistent with the need to address wildfire. Protecting older trees and forests can increase forest resilience to wildfires, and combat climate-change related impacts such as flooding and drought. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. - I urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravene EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Daniel Trovillion	98513	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Don Driscoll	61615	As someone who grew up in the Chicago suburbs, I grew to love our summer vacations to the national forests and the beauty of ancient nature that was very different from daily existence in the suburbs. When I grew up, I travelled and hiked regularly among the old-growth trees and forests that our nation has wisely chosen to protect. Further climate change has made it all too clear that we need our old-growth trees to absorb and store carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Unfortunately, the current Draft Environmental Impact Statement fails to protect these necessary old-growth trees and forests. I hate to say it but it appears that economic interests predominate over the interests of nature itself. We need to reverse those priorities so I urge that we strike the current proposed amendment and start afresh. A helpful start would be to end any commercial logging of old-growth trees at all so that economic interest is no longer a factor. We can still protect mature forests against fire. But we need a new amendment that puts the protection of the old-growth trees first for the sake of sustained biodiversity and for future generations. Thank you.

Natasha Mallette	97330	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. The most recent research is clear that old growth and mature forests are essential to carbon capture. Logging them is not sustainable and deprives us of the benefits of our largest, oldest trees. The Draft Environmental Impact Statement (DEIS) fails to protect old-growth trees and forests. The proposal allows old-growth trees to be logged judiciously and allows agency staff to remove old-growth in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill.The DEIS fails to protect mature trees and forests. By doing so, we fail to take advantage of their many benefits including annual carbon sequestration, genetic longevity, and forest biodiversity. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. They must be protected to aid in the fight against worsening climate change and biodiversity loss. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Nancy Payne	53719	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.PLEASE!!!
Sarah Heurich		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Sandra Todd	97439	I worked on the Siskiyou National Forest from 1974-1976. I plotted logging sales in an old WANG computer. The policy then was to not see a clear cut from any road. We are so far gone from that it's quaint to think it was ever a consideration. We thought we could grow trees faster with 2, 4, D and the office silviculturist put the chemical in a glass and told communities, pregnant women, it was safe enough to drink. Now the USFS is conning people into believing the problem with fire in our forests is... that we have forests!! I hear people say crazy things like well I guess we should have logged it since it burned anyway . Having no trees is not a solution to the very real climate crisis. Neither is thinning that actually dries out the ground and then makes the surrounding trees weaker.Shame on all of you. You are not stewards of our forests and most of you cannot be so stupid as to not know exactly what you're doing.The least you could do, the least, is to protect the 4% (is it even 4% anymore?) of Old Growth remaining. You full well know it is not possible to recreate these 1,000 year old forests and you know exactly why. I will not reiterate the development of a forest to people who know the reality. You Know.Stand up for our grandchildren. They deserve so much better than what the USFS is providing today. Tell the truth. Be bold. There Is No Planet B. (No matter what hot air blows out of Elon Musk's ears)

Barbara Davis	97394	The Forest Service should adopt a record of decision that is a strengthened version of Alternative 3 in the Draft Environmental Impact Statementâmodified as recommended in detailed joint comments you are receiving from a coalition of national, regional, and local conservation and public interest organizations. Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees.The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should:1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing.Mature forests and treesâfuture old growthâmust be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.Failure to protect our oldest trees and forests undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency previously received.
Jessie Tevelonis	15613	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g., for public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing, or even on the forest floor. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. Failure to protect our oldest trees and forests undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency previously received.

Arun Toke	97401	The Forest Service should adopt a record of decision that is a strengthened version of Alternative 3 in the Draft Environmental Impact Statementâ□□modified as recommended in detailed joint comments you are receiving from a coalition of national, regional, and local conservation and public interest organizations. Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees.The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should:1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing.Mature forests and treesâ□□future old growthâ□□must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.Failure to protect our oldest trees and forests undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency previously received.Thank you for protecting Old Growth.
ELIZABETH BEZANSON	78209-3948	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

They are worth more standing.Mature forests and treesâfuture old growthâmust be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.Failure to protect our oldest trees and forests undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency previously received.
Nicholas Isom	30314	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Michael Hughes	97330	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Mark Canright	08802	I am a dad and a farmer urging you to protect our old growth forests. The Forest Service should adopt a strengthened version of Alternative 3 in the Draft Environmental Impact Statementâas recommended in detailed joint comments you are receiving from a coalition of national, regional & local conservation & public interest groups.Mature & old-growth trees & forests protect our children & the climate by absorbing & storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water & shelter wildlife. Logging them deprives us of the benefits & beauty of our largest oldest trees.Prohibit old-growth trees to be sent to the mill. Don't allow agency staff to manage old-growth to death, in pursuit of "proactive stewardship" goals. Remove the ambiguous language in the draft that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should:End cutting of old-growth trees in all national forests and forest types & stop cutting any & all trees in old-growth stands in moist forest types.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing.Mature forests and treesâfuture old growthâmust be protected from the threat of commercial logging to recover old growth that has been lost to past mismanagement. They must be protected to aid in the fight against worsening climate change and biodiversity loss. They must be protected to ensure that our children are able to experience and enjoy old growth.Don't fail to protect our oldest trees and forests. It is essential you meet the objectives of this amendment, EO 14072 & 500,000+ public comments the agency previously received.Thank you for your attention to this extremely importa

Brad Erickson	97703	Please help protect mature old-growth trees and forests. Logging them is short sighted and destroys the benefits and beauty of our largest, oldest trees. As a resident of Oregon, I know the sadness and destruction of a clear cut or ravaged forest due to mismanagement and old-growth harvesting for short term profits. Recovering lands are a tinderbox and more a fire hazard to our communities than fire resistant old-growth. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.Please also properly fund the forest service and end the conflict of interest that encourages commercial exchange of old-growth trees to boost budgets.
Michelle Brenholdt	97703	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Giuliana Johnson		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Joseph Patrick Quinn	97416	WHEREIN WE AUDIT THE FOREST Seems each perceives this waking world sustains us divergent as anyone's dreamscape; lands peopled with beings strange as familiar, everyone's apprehension of the same space (spontaneous/preconceived) quite different. Why, where some see the growing girth of great trees to be our fortune left standing and count such wondrous features as fish, birds and all sylvan, aquatic, airborne, underground, field and sea creatures rich treasures, per se, still others (often of just as good will) tote the wild world's true and best blessings mostly in silver; silver, gold, copper, treasury notes, what have you can be banked up or spent down while value that cannot be so easily auctioned off to high and low bidders, added by bookkeepers for a boardroom's stock offering or taxed by the nation, a state or some county so neatly (no coin roll, till drawer nor prospectus can hold them) must be written in red. And yet, it seems: if we people are also earth's creatures, then to arrive at the true and best value (for centuries) of what old forests survive (seedlings, tall trees or fallen) and of all life surrounds us these millions of years and still growing most or only by taking nature's weight in gold, silver, treasury paper's to set mercenary's thumb too hard and too long on life's scale leaving scant space for birds' hollow bones, talons, tail and flight feathers; small place for thick bark, snags, high crowns nor wide boughs where owls, murrelets, flying squirrels, red voles can nest; even fewer cold, clean flowing streams so the salt scales of silver-side salmon, trout, eels and other sea creatures may swim their ways home to spawn; nor we humans so easily find rest in the rare shade of old trees' park glades to escape money's hoarding, roading, falling, stripping, dozing, grinding, shipping, burning, chipping, spraying, well oiled count down machine. © Joseph Patrick Quinn

The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
CHRIS HRUBESH	30310	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. We urge you to take this opportunity to protect our oldest trees and forests.
Maria Del Mar Ceballos	30306	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Daniel G. Dolensky	30033	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Seth Jacobs	22304	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Brian Darrow	53143	Please represent us and our future by standing for our natural world. Please consider there are things more important than pure commercial interest and just because we don't put a price on something doesn't mean it's worth less than things we do commercialize. Thank you for your consideration. -Brian D.Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees.The Draft Environmental Impact Statement fails to protect old-growth trees and forests. kery spitzer	80306	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Diane Miesbauer	53029	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Jordan Hall	46140	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Kim Foster	97465	Hello. My name is Kim Foster, full-time resident of Curry County, Oregon. I am a photographer, educator, hunter, and ardent lover of our old-growth forests in the coast range. I am writing because the Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.I urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.Thank you, Kim Foster
Tim Donnel	55387	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Kathleen Lyons	28273-7711	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Heather Venable	36117	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
John Barrett	30189	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Casey Primeau	05468	Have we all lost our minds? Old growth forests are to be protected unconditionally. Our ancestors cut down more than enough. Let's leave something for our kids to benefit from. Biodiversity is beyond valuable. Don't destroy what cant be replaced.
Zachary Burkes	95818	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Scott Whittaker	03110	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Eric Jones	03238	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Stephen Lawson	26501	Old-growth trees and forests absorb carbon, thus helping protect our climate, which is spiraling ever hotter, thus help in mitigating temperature. Logging them deprives us of this particularly benefit, among many others. The Draft Environmental Impact Statement fails to differentiate between Western largely coniferous forests, and Eastern largely deciduous ones, which in fact do more. And the Eastern is in bad shape age-wise, from historic over logging. This mistaken proposal continues to allow the felling of old-growth and for agency staff to (mis)manage old-growth out of existence when no distinction of non-commercial value is made. The decision could well be: End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. And. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down damaged old-growth trees is a false notion. They are valuable to wild-life, and to soil, so should be left standing. Mature forests and trees – future old growth – must be protected from the threat of commerce in order to recover old growth that has been lost through past mismanagement. Protection of mature forests can be accomplished in a similar manner as that of addressing the threat of fire. These must be protected to aid in the fight against worsening climate and human-caused biodiversity loss. These must be protected now to be sure that our children are able to experience old growth and a healthier world, materially, and spiritually. We urge you to protect our oldest trees and forests, for our now youngest generation. If you fail to do so, it would undermine the purpose of this amendment, contravene the direction of EO 14072, and ignore 500,000+ public comments the agency received on last summer's advance notice of proposed rule-making.
Laura Ouellette	97321	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. Patty McCormick	97703	We must find a balance between logging and forest/fire management. Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests which must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss and to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Joshua Evans	77406	The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill.The DEIS fails to protect mature trees and forests. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. With a growing population, we need not only more room to live, but more room to recreate outdoors. This Catch-22 is solved by building up instead of out and preserving natural areas.I urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Betsy Lawson	26501	I live in West Virginia, not far from the Monongahela NF and call for full protection of our old and older growth trees. The DEIS favors western forests and ignores the unique properties of our eastern forests. It ignores the unique carbon-sequestration and storage capabilities of eastern forests; it overemphasizes the threat of fire in eastern forests, as recognized by the Forest Service's own data; it uses outdated definitions of old growth, such as trees not logged since European settlement, thus limiting what areas will be identified as old growth; and it fails to provide clear guidance on recruitment of mature forest into old-growth conditions. This is particularly concerning for the Eastern seaboard with its shortage of existing old growth due to excessive logging before 1920. The NOGA must revise the DEIS and Alternative 2 to address local conditions. The Upper Cheat logging project in the Monongahela NF is one such project where clearcutting old growth on steep slopes would cause flooding, soil erosion and sedimentation in our streams, threatening many species. Most importantly, letting existing natural forests grow is essential to any climate goal we have since they are the best way to remove CO2 from the atmosphere.
Pat Mason		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Moira Ashleigh	13827	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Diane Kastel	60189	Mature & old-growth trees & forests protect our climate by absorbing, and, storing carbon, boost resilience to fire, help regulate temperatures, filter drinking, water &, shelter wildlife! Logging them deprives us of the benefits & beauty of our largest, oldest, trees! Your Draft Environmental Impact Statement fails to protect old-growth trees & forests! The proposal allows, old-growth trees to be sent to the mill & allows, Agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals! The draft, also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision MUST: 1. End the cutting of, old-growth, trees in all national forests & forest types & end the cutting of any trees in, old-growth, stands in, moist, forest types! 2. End, any, commercial exchange of old-growth trees. Even in the, rare, circumstances where an old-growth tree is cut (e.g. public safety), that tree MUST NOT be sent to the mill! Cutting down, old-growth, trees to save them from, potential, threats is a, false, solution! They are worth, more, standing! The DEIS fails to protect mature trees & forests! Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement! Protection of, mature, forests can be accomplished in a manner that is consistent with addressing the threat of fire! They MUST be protected to aid in the fight against, worsening, climate change & biodiversity, loss! They MUST be protected to ensure that our children are able to experience & enjoy, old, growth! We urge you to take this opportunity to protect our oldest trees & forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, & ignores 500,000+ public comments the Agency received on, last, summer's advance notice of proposed rulemaking!
Lorri Freitas	92111	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Trisha Lootens	81055	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Tammie Wheeler	88061	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. Janette Dean	55921	As a Minnesotan who has long loved and honored the majesty and importance of older trees as a central part of the gifts of nature, allow me to remind all at our U.S. FOREST SERVICE that forests in Minnesota and other U.S. areas are doing much of the hard work of protecting our atmosphere, wildlife, and us while we the people continue to be held back by industries and agencies who fall for industry excuses vs. embracing better solutions that most help both people and nature to COEXIST. We are still doing far too much damage to our air, water, lands and forests and should not be harming some of our closest allies who can help save us from our own ongoing destruction: Old Growth and Mature Forests and Trees! The U.S. Forest Service must therefore give them the HIGHEST priority to properly protect our nation, people and every industry for that matter that depends a livable planet where people still exist in a safe world that is 1) stable vs. apocalyptic–due to destroyed carbon cycles and 2) thriving with rich ecosystems that are truly protected in ways that enhance them–not injure them and the streams, rivers, habitats, and species among them. The current DEIS FAILS to protect mature trees and forests! Mature forests and trees – future old growth – must be protected NOW from the threat of commercial logging in order to RECOVER old growth that has been lost to past mismanagement, shortsightedness, and callousness. To aid the fight against worsening climate change and biodiversity loss, mature forests using more traditional ecological knowledge that allows others in the future to have old growth trees and forests, too, rather than having them stolen from them now due to half-measures. I therefore ask you to responsibly and more permanently protect our oldest trees and forests as public and agency responsibilities which are not to be compromised at this critical time in human and natural history. We can more carefully and thoughtfully protect all with true win-wins.

Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Tracy Elliott	91602	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Torger Johnson	94605	Mature and old-growth trees on Federal land are our indigenous and adopted heritage. Forests protect our climate by absorbing and storing carbon. They boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. The DIS fails to protect old-growth trees and mature forests that are our next old growth. Modify the proposal to save old-growth trees from the mills and stop managing old-growth out of existence in pursuit of "proactive stewardship" goals. The draft should not contain its ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. I want to see an end to cutting of old-growth trees in all national forests and forest types, end the cutting of any trees in old-growth stands in moist forest types. End most types of commercial exchange of old-growth trees. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing, even as snags. The DEIS fails to protect mature trees and forests. Mature forests and trees must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected for generations to come. Please take this opportunity to protect our oldest trees and forests. A failure to do so will undermine the objectives of this amendment and contravene the direction of EO 14072. Do not ignore 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking. Thank you for your time. -Torger Johnson
Olivia Clark	90046	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Kellie Cool	34240	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
John Zwierzycki	97702	Hi there, Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Cecilia Kane	20009	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Cindy Russell	31768	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Emily Roudebush	22003	Mature and old-growth trees and forests are nature's stewards and the lungs of our planet. They protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest and most beneficial trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The current proposal allows old-growth trees to be sent to the mill and permits agency staff to potentially manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. The DEIS also fails to protect mature trees and forests. This future old growth must be protected from the threat of commercial logging in order to restore old growth that has been lost. Protection of mature forests can be accomplished in a manner that's consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss, and to ensure that our children and grandchildren are able to experience and enjoy old growth trees and forests. I urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Rachel Smith	21228	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Sarah Jenkins	78746	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Carol Anderson	01040	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Ed Huling	08525	Old growth forests are irreplaceable ecosystems with thousands of species of plants animals, insects and microbes that contribute to creating a liveable climate on earth. I am a soil scientist, farmer and ecologist, and I am particularly concerned that old growth forests are the repositories of thousands of species of soil organisms that support plant and crop productivity and resilience that have been wiped out by centuries of plowing and chemicals. When these old growth forests are gone, these microbes will be gone, along with many other species of plants and other organisms found no where else. Forests play a far greater role in cooling the planet than is normally publicized. Of course, they store carbon, to keep it out of the atmosphere, but trees actually cool the earth by evaporating water, which transports solar heat in latent form up into the upper atmosphere, where water vapor recombines, releases heat which radiates back out to space. Without trees, solar energy heats up the ground, and much of that heat is trapped by greenhouse atmosphere as long wave radiation (heat) radiates back out to space. Forests are cool because of the effect of evaporation of water. On a global scale, the trillions of trees that humans have cut down have been replaced by deserts and arid wasteland, now covering 46% of all land area on earth according to the IPCC. Thinning forests to reduce fire risk is a fallacy. Dense forests actually slow down the advance of fires. And clear cutting forests reduces future forest productivity by over 50%, because the combination of removing the minerals contained in trees, and the erosion of soil that follows logging has a dramatic negative effect on the rate of future tree growth. There are so few old growth forest areas left on earth, that it is a precious legacy for our children that we protect them. Please listen to knowledgeable people rather than the financial forestry interest in this case. Thank you.
CATHARINE LOFROOS	94952	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Whitsun Koutnik	13820	Trees have been around for a whole lot longer than people have. They've survived several extreme environmental shifts, and have generally just taken care of the world better than we have. The best course of action, in my opinion, is to leave them alone. Additionally, forest management is often used as an excuse to generate lumber capital, without regards for the greater good. Let's avoid that by protecting forests permanently, not just for the relatively short amount of time it takes for them to become timber.
Allison Ke	19027	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. Kirk Barrett	07079	Old-growth trees are irreplaceable assets that protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Peter Milenkovic	21013	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
john diversey	60045	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Ann Bykerk-Kauffman	95928-4132	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Daniel Hardwick	44907	There are precious few places in North America where someone can go to experience what a true native forest looks like. Timbering results in the proliferation of invasive species which insure the native habitat that wild animals depend on will not survive. The timber industry's solution is either nature takes its course or spray toxins which inevitably do damage to surrounding botany & wildlife. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Maggie McMillin	49630	Protecting old growth forests is a priority for our future and our planet. We need specific, measurable laws that will protect old growth forests and responsibly manage our PUBLIC lands. All commercial timber harvest must be restricted in old growth forests. In addition to that, we need the following: -Reduced opportunities for the cutting of old-growth trees and any trees in old-growth stands that are in moist forest types.-NO de minimis logging of old-growth trees.We also must support the development of future old growth by protecting mature forests.Protect old growth forests by restricting all commercial timber forests in old growth forests!Sincerely,Maggie McMillin
Paige Crane	43209-1425	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Greg Cooledge		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking. Thank you!
Linda Janiszewski	80218	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees & forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rule making.
Nicole Sommerdorf	27614	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Mary McClelland	60640	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Deha Sea	96718	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
BJ Huser	55082	Logging mature and old-growth forests deprives us of protection of the climate by absorbing and storing carbon, resilience to fire, temperature regulation, drinking water filtration and shelter for wildlife. The DEIS fails to protect old-growth forests. The proposal allows old-growth trees to be cut and agency staff to manage these forest out of existence in pursuit of proactive stewardship goals. The ambiguous language in the draft could be used to justify continued commercial logging of old growth in the Tongass, for example. The final record of decision should: 1.End the harvest of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is not a sustainable solution. The DEIS fails to protect mature trees and forests as well. Mature forests and trees (future old growth) must be protected from the threat of commercial logging so we can recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against climate change and biodiversity loss, among the other benefits they provide. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores hundreds of thousands of public comments the agency received on last summer's advance notice of proposed rulemaking. Thank you for listening.
Melinda Wise	24202	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Leslie Kuhn	92027	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Catalina de Onis	59803	Dear Forest Service Members: Essential for absorbing and storing carbon, mature and old-growth trees and forests are essential for fire resilience, filtering drinking water, sheltering wildlife, and many other key functions. Logging threatens these beautiful trees that are essential for a sustainable climate.The DEIS fails to protect old-growth trees and forests. Old-growth trees should not be sent to the mill, nor should agency staff be permitted to engage in "proactive stewardship" goals that, in practice, jeopardize these forests. The EIS also contains unclear language that could be used to continue commercial logging of old growth in the area.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g., public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that humans and non-humans today, and future generations, can experience old growth.I urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
James Rankin	97330	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
James Holm	97333	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Amalia Gladhart	97405	Mature and old-growth trees and forests absorb and stor carbon, boost resilience to fire, help regulate temperatures, filter drinking water, and shelter wildlife. These climate protectionsâ and the beauty of our largest, oldest treesâ must not be lost to logging. Unacceptably, the Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.Cutting down old-growth trees to save them from potential threats is a false solution. These trees are worth more standing.Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. These trees and forests must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill.I urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Nelson Agudelo		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Reece Salmons	92110	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Lis McLoughlin		Big trees are essential to life on earth. They are not protected by this draft, which allows agency staff leeway to manage them and contains ambiguous language that could be used to justify continued commercial logging of old growth. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Like elephant tusks, these trees should not be allowed to be traded because they are a needed living resource. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Old growth trees protect against fire by shading and by standing up to fire better than small trees. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Tara Ohta	91602	When I am Among the Trees By Mary Oliver When I am among the trees, especially the willows and the honey locust, equally the beech, the oaks and the pines, they give off such hints of gladness. I would almost say that they save me, and daily. I am so distant from the hope of myself, in which I have goodness, and discernment, and never hurry through the world but walk slowly, and bow often. Around me the trees stir in their leaves and call out, "Stay awhile." The light flows from their branches. And they call again, "It's simple," they say, "and you too have come into the world to do this, to go easy, to be filled with light, and to shine." Please listen to Mary Oliver and understand why we need trees. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Cindi Lund	98261	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
David Mallard	03226	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Chelsi Britton	77586	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Rob Cantwell	96768	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Melinda Barnes	96067	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Amelie Hackenberg	82049	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Maren Madsen	04150	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Mike Rust	98261	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Molly Brown	96067-2754	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Christina Kohlruss	80439	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Zoe Nabarrete	96094	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types. 2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth. We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Virginia Perdue	15701	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. Eva Gantala	98272	It is essential that we preserve our remaining mature and old-growth trees and forests. They help protect our climate, filter drinking water, shelter wildlife, and provide many other essential benefits. This draft proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.I urge you to strengthen the proposal to:End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Protect mature forests and trees – future old growth – from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire.I urge you to ensure that we are protecting our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of Executive Order 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.For the sake of all of us, but especially the young people who need the climate protections and other benefits that forests provide, please strengthen the amendment to protect mature and old-growth forests. Thank you.
BEVERLY PARSONS	98340	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Karen Caton	98501	We must protect old-growth trees and forests which protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill.The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.Thank you.
Thomas Winner	11201	My family owns an old farm in Western Massachusetts. Recently, the property next door went up for sale. It's full of large, old trees that are on too steep a slope for logging. Developers were interested, as it has great views, but I bought the land to ensure it the old trees would continue to grow. Old trees are worth more standing. Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill.The DEIS fails to protect mature trees and forests. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

singih tan		<p>Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Elizabeth Schuster	98122	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Jeffery Goss	80504	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Zachary Schwartz	95661	Hello, tAs a California resident, I must express my concerns over the fact that the current Draft Environmental Impact Statement fails to protect mature and old-growth trees and forests, especially in Tongass, Alaska. This is because the Tongass National Forest is the largest U.S. National Forest at 16.7 million acres. Much like the coastal redwoods of California most of its area is temperate rainforests and is home to many species of endangered and rare flora and fauna. These trees protect our climate by absorbing and storing carbon, boosting resilience to fire, helping to regulate temperatures, filtering drinking water and sheltering wildlife. As such they must be protected to aid in the fight against worsening climate change and biodiversity loss. Logging them along with other mature and old-growth trees deprives us of the benefits and beauty of our largest, oldest trees.The Final Environmental Impact Statement should:1. End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2. End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing.I along with hundreds of thousands of Americans and the Climate Forests Organization urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.Thank you for reading and please protect our mature and old growth forests so that our children can experience and enjoy old growth.Sincerely, Zachary Schwartz

The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Giovanny Hernandez	80301	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Al Slyman	97206	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.
Pablo Lopez-Gallego	92807	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging them deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should: 1.End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.2.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. They are worth more standing. The DEIS fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores 500,000+ public comments the agency received on last summer's advance notice of proposed rulemaking.

Greg Jacob	97124	Thirty years ago, the Northwest Forest Plan (NWFP) was developed under the Clinton Administration. It aimed to protect and restore old-growth forest and healthy stream habitat for threatened species, covering forestlands in western Oregon and Washington and northwestern California. Today the U.S. Forest Service (USFS) is updating the NWFP, ("NW old growth forests get more protections under new federal plan," Dec. 23). The original plan did not adequately consult Indigenous peoples or account for the impact of climate change on wildfire behavior, water systems, imperiled species and communities. A draft of the update was published before the meeting of the Northwest Forest Plan Area Advisory Committee June 25-27 in Olympia; the update should be complete by the end of this year. Ideally, President Joe Biden will sign an executive order to ensure protection for mature and old growth forests (MOG) and close a loophole allowing logging under the pretext of forest health or fire management. There is significant documentation of the role that MOG forests have on climate, severity of wildfire and biodiversity. The USFS has increased the cutting of timber from our national forests, and made it harder for people to challenge ecologically damaging timber sales. Its priority should be climate mitigation and biodiversity.
Mary Addams	97402	The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass. The final record of decision should:End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. â□ they are worth more standing. The DEIS also fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores more than 500,000 public comments the agency received on last summer's advance notice of proposed rulemaking.

Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores more than 500,000 public comments the agency received on last summer's advance notice of proposed rulemaking.
K Priya		Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. The Draft Environmental Impact Statement fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should:End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. â□ they are worth more standing. The DEIS also fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072.

Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill.The DEIS also fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement. Protection of mature forests can be accomplished in a manner that is consistent with addressing the threat of fire. They must be protected to aid in the fight against worsening climate change and biodiversity loss. And they must be protected to ensure that our children are able to experience and enjoy old growth.We urge you to take this opportunity to protect our oldest trees and forests. Failure to do so undermines the objectives of this amendment, contravenes the direction of EO 14072, and ignores more than 500,000 public comments the agency received on last summer's advance notice of proposed rulemaking.
Tonya Enger	98664	Mature and old-growth trees and forests protect our climate by absorbing and storing carbon, boost resilience to fire, help regulate temperatures, filter drinking water and shelter wildlife. Logging these trees deprives us of the benefits and beauty of our largest, oldest trees. The Draft EIS fails to protect old-growth trees and forests. The proposal allows old-growth trees to be sent to the mill and allows agency staff to manage old-growth out of existence in pursuit of "proactive stewardship" goals. The draft also contains ambiguous language that could be used to justify continued commercial logging of old growth in the Tongass.The final record of decision should:End the cutting of old-growth trees in all national forests and forest types and end the cutting of any trees in old-growth stands in moist forest types.End any commercial exchange of old-growth trees. Even in the rare circumstances where an old-growth tree is cut (e.g. public safety), that tree should not be sent to the mill. Cutting down old-growth trees to save them from potential threats is a false solution. â□□ they are worth more standing. The DEIS also fails to protect mature trees and forests. Mature forests and trees – future old growth – must be protected from the threat of commercial logging in order to recover old growth that has been lost to past mismanagement.
