

# Forest Visit Documentation Form

## Siuslaw National Forest

Forest Visit **ID Name** \_Road 1201 –along Stillwell Creek heading  
west\_\_\_\_\_STOP 4\_\_\_\_\_

(Use any name you wish. Followed Forest Service road No.)

Multiple stops on the same road, ID Name followed by 1, 2, 3, etc.)

**GPS** DM or DMs **location:** Latitude

\_\_\_\_\_45.05082N\_\_\_\_\_

Longitude

\_\_\_\_\_123..48443W\_\_\_\_\_

(I–Phone compass provides Lat Long location or use the recommended App.)

Latitude typically starts with **44°** and ends with a **N** for north.

Longitude typically starts with **123°** and ends with **W** for west.

**Compass Direction** from Road (Check One)

N \_\_\_\_ NE \_\_\_\_ E \_\_X\_\_ SE \_\_\_\_ S \_\_\_\_ SW \_\_\_\_ W \_\_\_\_ NW \_\_\_\_

Road Number from Siuslaw Road Map: 1201 END OF road

Measured Tree Circumference (inches): 172 Doug Fir = Diameter:

(Circumference / **3.141** = diameter) 54.8

Estimated diameter of Typical Dominant (tallest) Trees (inches): 35+

Place an X next to tree species present. Doug fir: x Hemlock: x Cedar:

Sitka Spruce: Alder: x Big Leaf Maple:

Is a shade tolerant understory of Hemlock or Cedar present? Yes: X No:

Describe understory: Thick with tall mature understory plants and lots of variation of tree height , largest canopy trees mostly Doug Fir and Hemlock

## Plants Identified

Huckleberry: X Salmonberry: X Thimbleberry: Blackberry: x

Elderberry: Vine Maple: Dogwood: Cascara:

Salal: X Ferns: X Moss: X Lichen: X Fungi: X

Notes on other plants present: Wrinkled coral fungus, deer fern, turkey tail, oregon grape

Animals observed:

Birds Present: Pacific Wren

**Notes:** Some bigger trees along the old abandoned logging road that runs northwest to road 1201 it's 111, but lots of the abandoned roads are labeled 111 etc. mostly second growth with some mature trees amidst them. This area seems like it was clearcut more recently and more heavily logged.

This whole area of the road 1201 along Stillwell Creek is a mature stand, some of the upper parts of the canyon are secondary growth, Mature stands follow the creek, beyond those creek canyons are mostly secondary plantation like forests.

Towards the higher the road goes the more logging there was clearly demonstrated by the younger stands.

## Keeping Track of Your Forest Photos

Option 1: Before you take your forest photos, write down the forest visit name on the form and take a photo of the name. Then take the forest photos. Note that the photos **after** the forest visit name belong to that name.

Option 2: Take a screen shot while your GPS app is on before your forest and tree photos (I–Phone).

**Optional** (All information in the form will be viewable by the public)

Your Name: Madeline Strawberry and Tony Rueth

City: Woodburn

State: OR

Insert Stand Photo (**Optional**)

ID/Name

Insert Photo of the typical tree that was measured (**Optional**)

ID/Name:

Save the document as a pdf file for uploading to the Forest Service comment portal.
