1555 River Dr

Jackson, WY 83001-8849

2025-08-18

Dear Forest Supervisor Chad Hudson,

Thank you for your work on the draft assessment and for recognizing the importance of wildlife on the Bridger-Teton National Forest. To ensure the future of our incredible wildlife for future generations, I urge you to include all available and peer-reviewed big game migration data in the final assessment for the Bridger-Teton National Forest Plan.

This landscape plays a critical role in the long-distance migrations of elk, mule deer (including the iconic Wyoming Range herd), pronghorn, moose, and bighorn sheep. For decades, state, federal and private research biologists have accumulated an enormous amount of information about local herds and their movements, which the USGS has published in numerous reports over the past few years.

To ensure the future Forest Plan is grounded in the best available science, a complete picture of current wildlife movements is essential.

Please include this important data.

Sincerely,

Roberta Hendrickson
